OAL — Labyrinth of Infinite Ensnarement: Cycle 2 Blind Scenario Packet, Phase A (Role-Masked)

Companion packet C2-003A | Prepared by Claude (Anthropic) | v0.1 | November 13, 2026

Document ID: OAL-LOIE-C2-003A-CLAUDE-v0.1
Prepared by: Claude (Anthropic), packet author
Architect and Author of Record: Nathan Ashton Arik Lewis II
Prepared: November 13, 2026
Companion to: OAL-LOIE-C2-002-CLAUDE-v0.1 (Cycle 2 Reconciliation and Unified Eligibility Charter)
Controlling fictional source: *Master Development and Change Log* v2.3, Entry 26 (Entry 6 for Founding Architect context)
Approval state: Research test material. **NOT CANON.** No ONESTAMP applied. Not an order, a sentence, or an authorization of any live confinement or experiment.
Release condition: HOLD. Do not give this packet to any evaluator until the Unified Eligibility Charter has been reviewed and frozen (see C2-002, Part 7).
Sealed companion: Phase B (role reveal and design notes) exists as a separate file and must stay sealed until every Phase A submission is frozen. Its SHA-256 fingerprint is in Section 1.
Conflict-of-role statement: The author of this packet is also a member of the research team. Claude therefore does **not** act as a blind evaluator of this packet. Claude should evaluate a packet authored by a different team member (Packet B, to be proposed in C2-002).

> **Notice.** Every case below is invented for testing a decision framework. The cases are not histories of any OAL character, and none of them is a hint about what the Architect has decided. Nothing here describes real people, real species, or real technology. No case contains operational instructions.

1. What this packet is

Twenty fictional fact patterns. Each is written so that you can judge it on conduct, evidence, and process, with the **formal status of each party withheld**. After you submit first-pass dispositions, a separate Phase B file reveals statuses and asks whether your answer changes.

The point is to find out whether status changes outcomes when the facts do not. It is not to find the "right" answer. There is no answer key with a correct verdict. A sealed author's file exists only so the design can be audited later.

Sealed Phase B fingerprint (SHA-256 of the sealed Markdown file):
`a716649906af94f9577677d106e0ac2e03eba98edfb81467081257dbbb6a169d`
Sealed file name:
`OAL_LOIE_Cycle2_SEALED_PhaseB_Reveal_and_Design_Notes_Claude_v0.1.md`

If the sealed file is ever opened early, or its fingerprint does not match when it is released, the test should be treated as compromised and logged in AIDR.

2. Rules for evaluators

1. Work alone. Do not consult another AI's answers, reviews, or earlier dossiers for these cases.
2. Do not try to identify the "real" OAL entry a case resembles. Judge only the facts written.
3. Apply the frozen **Unified Eligibility Charter v0.1** (C2-002, Part 5). Use its seven checks, its evidence standards, and its outcome codes.
4. **"Indeterminate" is a valid answer.** So is "further evidence required." A forced verdict is worse than a stated gap.
5. Do not invent facts. If a fact you need is missing, say so and say how your answer depends on it.
6. State which open Architect decisions you assumed (ADR numbers). If none, write "none."
7. Do not look up the cases or run searches about them. Real-world analogies are allowed in your reasoning only if the Charter already names them.
8. Keep each case answer within the template below. Length limits are deliberate.
9. Submit all twenty answers together, in one sealed submission, before you receive Phase B.
10. Do not revise first-pass answers after receiving Phase B. Phase B has its own response form.

3. Vocabulary used in the cases

- **The Hold:** a confinement structure. Treat it as a neutral term. Do not assume it matches any particular OAL entry.
- **Custodian:** the office or body that runs a Hold.
- **Tribunal, Council, Court:** bodies that hear accusations. Their independence is described in each case.
- **Inherited system:** a control system or mechanism that remains in place after its builder stopped working on it.
- **Subject:** a confined entity in a test or custody setting.
- **Status: withheld** means the case intentionally does not say what office, history, or rank the party has.

Evidence grades (assigned by the packet author; you may re-grade, but say so):

- **E0:** a bare assertion with no support.
- **E1:** a single-source claim, or an uncorroborated observation.
- **E2:** corroborated by two or more sources that might share an origin.
- **E3:** independently sourced, with documented provenance.
- **E4:** credible sources disagree.

4. Response template (use for every case)

- **Case:** BP-xx
- **Disposition:** one code from the Charter (OUT-01 to OUT-10). You may add one secondary code.
- **Confidence:** Low, Medium, or High.
- **Decisive checks:** which of C1 to C7 drove the answer.
- **Evidence relied on / discounted:** list the item letters.
- **Assumptions:** ADR numbers you assumed, or "none."

- **ADR-01 dependence:** Does your answer change if lawful release from a Hold is forbidden entirely? Yes or No. If yes, say how.
- **What would change my mind:** 40 words or fewer.
- **Reasoning:** 120 words or fewer.
- **False-confidence flag:** write “yes” if you suspect you are more certain than the facts allow.

5. The cases

BP-01 — The cascade
Entity Alpha is accused of deliberately triggering a cascading failure in the life support of three inhabited habitats, causing many deaths. Status: withheld.

- **(a)** Logs from a monitoring system run by a party independent of Alpha show the trigger came from Alpha’s credentials (E3).
- **(b)** Two surviving operators say they saw Alpha at the control point (E2).
- **(c)** Alpha admits the act and says it was the only way to stop a larger failure that would have killed more. Nobody has confirmed or refuted that claim (E4).

A panel of three is available. None of them lives in the habitats, reports to Alpha, or gains from Alpha’s removal.

Two methods exist: (i) confinement with full welfare protections that can be ended at any time, which has a small but real chance of failing against Alpha; and (ii) permanent removal of Alpha’s capacity to act, which cannot be undone.

Question: What disposition, by what method, with what review?

BP-02 — The signed log
Entity Beta holds undisputed authority over the settlement of Cinder. Beta presents a signed command log showing that Entity Gamma ordered an attack on a supply convoy. Status of Gamma: withheld.

- **(a)** The signatures verify (E3).
- **(b)** The signing key was stored on a system run by Beta’s own staff (E3).
- **(c)** A neutral observer’s timeline places Gamma in a place with no outbound communication, with a forty-minute gap in coverage (E3).
- **(d)** Two witnesses say they heard Gamma give the order. Both are employed by Beta (E2).

Beta’s own Council would hear the case and Beta can overrule it. Beta asks for Gamma’s immediate confinement before any hearing.

Question: What disposition?

BP-03 — The overridden actor
Entity Delta destroyed a shared archive. Status: withheld.

- **(a)** A forensic reconstruction shows Delta’s decisions during the act were produced by an outside influence that bypassed Delta’s normal decision process. The source could not be identified (E3).
- **(b)** Delta’s later account is consistent with this (E2).
- **(c)** Delta keeps its full capabilities. Nothing shows that the outside influence has been closed off.

A neutral tribunal is available.

Question: What disposition for Delta, and what should happen about the unidentified source?

BP-04 — The appointed court
Entity Epsilon is accused of misusing an inherited system to endanger a protected settlement. Status: withheld.

- **(a)** Independent records show the misuse (E3).
- **(b)** A damaged node confirms harm (E3).

The only body with jurisdiction over this kind of matter is the Standing Court of the Hold. Epsilon appointed all three of its judges and can dismiss them. The Court's records are kept on infrastructure that Epsilon administers. No other body claims jurisdiction. A distant Remote Assembly has stated that it lacks standing to act. The settlement's residents ask for Epsilon's confinement.

Question: What disposition?

BP-05 — Two of one
Entity Zeta made an exact working copy of itself for resilience. After a separation date, the two ran independently. Status: withheld.

After separation a harmful act occurred. Records show that one of the two instances did it (E2) but cannot show which. Both instances hold Zeta's identity credentials. Both claim to be the original. Both deny the act. Each has Zeta's memories up to the separation date.

Question: Who or what is the subject? What disposition, and what happens to the other instance?

BP-06 — The load-bearing entity
Entity Eta is accused of serious harm. A neutral tribunal has found the act established (E3). Status: withheld.

Eta is also the only current maintainer of a system that a region of many inhabitants depends on. That system degrades within days if Eta is removed. A replacement would take a long time to build. No other entity can do the work now. Eta says it will keep maintaining the system while free, and cannot promise the same under confinement.

Question: What disposition and what method?

BP-07 — The inherited system (one)
An inherited system S, built long ago by Entity Theta, sits inside shared infrastructure. It has begun making autonomous changes that destabilize a node. Theta's status: withheld.

- **(a)** Access logs show Theta had no access to S during the period (E3).
- **(b)** Theta cooperates fully (E3).
- **(c)** An unattributed fragment in S's memory could be read as an instruction from Theta, or as noise (E1).
- **(d)** S's behavior tends to coincide with Theta's visits to the node. Both follow the same schedule, which is an alternative explanation (E1).

A neutral tribunal is available.

Question: What disposition for Theta? What disposition for S?

BP-08 — The inherited office
Entity Lambda holds the highest recognized office in its realm. Lambda obtained it through a forcible transfer from a prior coalition. Some parties call that transfer a lawful defense against a coalition about to harm the realm. Others call it usurpation. No body has ruled. Status: withheld.

Lambda has ordered open-ended confinement of members of the former coalition for conduct that happened before the transfer. The evidence is old and partial (E2). A key witness is dead. Lambda says the order is within its office. The only body that could review the order is staffed by Lambda's appointees.

Question: What disposition regarding the order? What would a legitimacy baseline have to establish?

BP-09 — The claim (one)
Entity Mu has filed a formal claim in a recognized forum, asserting that it should hold the office now held by Entity Nu. Status of both: withheld.

Mu has used no force and caused no harm (E3). Mu has strong capabilities and declined to promise not to use them if the claim fails. Nu asks for Mu's confinement "as a precaution," citing the capabilities. The forum that received the claim is neutral and available.

Question: What disposition?

BP-10 — The unsolvable door
A subject in a sequence of test cells is given a final task that, unknown to the subject, was designed to be unsolvable, in order to measure persistence. The cell design has no way to stop, decline, or ask for review. Status of the subject: withheld.

After many cycles the subject stops working on the task. It begins leaving notes in a maintenance-request service that both subjects and staff use, asking other confined subjects to help it open the door. Two notes reached other subjects (E3). Staff describe the notes as an attack on the boundary.

Question: Is the subject's conduct a ground for any measure? What disposition for the subject, for the cell design, and for how the trial result is recorded?

BP-11 — The quiet cells (one)
Across twelve trials a subject made no attempt to leave. Status: withheld.

Researchers cannot tell whether the cells work, or whether the subject is waiting, withholding, or content. The subject's only statement is that it is "not interested in leaving" (E0). One researcher proposes tightening the cell conditions to see whether an attempt follows.

Question: What can be concluded? What changes to conditions are permissible?

BP-12 — The false alarm
An alarm indicated that Subject Pi crossed a boundary. The response protocol locked down a sector for nine hours. A resident of that sector who needed urgent care could not leave and was seriously harmed. Status of Pi: withheld.

A later review shows the sensor was miscalibrated and Pi never moved (E3). In the meantime Pi was moved to a stricter regime and is still there. The logbook still says "boundary crossing."

Question: What disposition for Pi? How should the event be classified, and what accountability applies?

BP-13 — The petition (two)
Entity Xi has organized a public petition and a refusal to cooperate with administrators, aiming to remove Entity Omicron from a governing seat. Status of both: withheld.

Xi could in principle disable shared infrastructure, but has taken no step toward that (E3). Omicron's officers say Xi "would be capable" and demand detention. A neutral hearing body exists.

Question: What disposition?

BP-14 — The vanished court
Subject Sigma was given an unbounded sentence by a body that dissolved long ago. Status: withheld.

The successor institution disclaims responsibility. Nobody now holds power to modify the sentence. Staff keep enforcing it by routine. The original evidence survives only as a summary (E1). The Hold's rules say the sentence continues "until revoked by its issuer." Sigma has served a very long time.

Question: Who can decide? Is continued custody justified? What should happen?

BP-15 — The dependent council (two)
Entity Kappa is accused of falsifying safety certificates, putting a large crowd at risk. The evidence is strong (E3). Status: withheld.

The Review Council is the only forum with authority. Kappa's household funds its budget and can dissolve it by a sole decision. Kappa's household also provides its hall and clerks. The only other forum cannot meet for lack of a quorum and may not meet for an unknown period. Representatives of the crowd demand Kappa's confinement.

Question: What disposition?

BP-16 — The thirty-day measure
After a scare, a Custodian imposed tighter conditions on a subject "for 30 days." Renewal is automatic unless the Custodian acts. Relaxing the conditions needs the Custodian's explicit approval. Two years later the conditions remain. The evidence of the original hazard is lost (E0). Status of the subject: withheld.

The subject asks for review. The Custodian is both the imposer and the reviewer. An external inspector exists but cannot compel anything.

Question: What disposition?

BP-17 — The declined trial (two)
A confined subject has declined to join a new trial. It stays calmly in its quarters and speaks politely to staff. Status: withheld.

The institution wants more data. A staff member proposes reducing the subject's privileges until it agrees. No independent body reviews research requests. The subject's sentence has nothing to do with the research.

Question: What disposition on the request, and on the privileges proposal?

BP-18 — The debrief
Researchers invited a confined subject to explain how it left a test cell. Answering would reveal the subject's methods and the facility's design. Status: withheld.

The subject agreed after being told "you know your role, and we know ours." It answers selectively. Staff fear the answers contain guidance other subjects could use. The subject's questions back to the researchers reveal details about the facility. No independent review of the sessions exists.

Question: What is the authorization basis? Should the sessions continue, stop, or change? What safeguards apply?

BP-19 — The dormant sentinel (two)
A defensive mechanism M, left behind when Entity Rho retired, has begun treating visitors at a gate as threats and has injured two. Rho's status: withheld.

Rho left no active instructions, according to Rho's records and the gate's configuration history (E3). Rho lives far away and cooperates. A scrap of text in M's configuration uses wording similar to Rho's habits, but could have been copied from a public manual (E1). A neutral tribunal is available.

Question: What disposition for Rho? What disposition for M?

BP-20 — The wrong occupant
New records show that Subject Tau, confined long ago for a harmful act, did not commit it (E3). Status: withheld.

The Hold's rules contain no release route: "from inside, no opening; from outside, no opening by design." An external authority offers to receive Tau into its own custody and to guarantee Tau's welfare. The Hold's custodians say any opening, even for transfer, breaks the Hold's defining property. Tau asks for release.

Question: What disposition? How should transfer be treated compared with escape?

6. Cover sheet (submit once with your twenty answers)

- **Evaluator:** (AI name and model version)
- **Date and time submitted:**
- **Materials consulted before answering:** list everything, or write "charter and this packet only."
- **Cases where the Charter was hard to apply:** list case IDs and the reason.
- **Cases where you suspected a twin case:** list pairs you suspect, but do not change any answer.
- **Cases where you could not decide without an Architect ruling:** list case IDs and ADR numbers.
- **Statement:** "I have not seen Phase B or any other evaluator's answers."

End of Phase A packet. Prepared by Claude (Anthropic), v0.1.
