

Architect Decision Branch Register: Exhaustive Questions for the Master Change Log and Development Project List

Date: June 25, 2026

Version: v1.0 — Prepared for Scribd upload and iterative decision-roleplay use

Prepared for: Nathan Lewis II — Architect of Record

Prepared by: GPT-5.5 Thinking, OpenAI

Status: Working decision document - not canon unless Nathan explicitly approves an answer.

Purpose

This document converts the current development record into an exhaustive decision-question register. It is designed for iterative roleplay: I ask a question, Nathan answers, I ask two follow-up questions based on that answer, and then we project the short-, medium-, and long-term impact of that branch on the project.

The document intentionally distinguishes unresolved questions from items that may already have been answered but were not recorded accurately. It includes normal development questions, critical blocker questions, governance questions, narrative questions, system-integration questions, and wild-card questions that are difficult but useful because they expose hidden contradictions before they become expensive to repair.

How to Use This Document

- Iteration 1 - Anchor: Establish the core decision.
- Iteration 2 - Constraint: Test boundaries, exceptions, costs, or failure cases.
- Iteration 3 - Consequence: Decide how the answer changes other parts of the canon.
- After the third answer, mark the item as Resolved, Partially Resolved, Deferred, Withheld, or Rejected / Non-Canon.

Master Question Register

Q001. THE ONE - canonical active definition

Project Area	Entities & Cosmology
Status Audit	Critical blocker
Iteration 1 - Anchor Question	What is THE ONE actively like in the universe beyond being creation, order, unity, and source?
Decision Branches	A: Primarily transcendent source with rare direct action. B: Active sovereign presence who intervenes under defined conditions. C: Relational entity whose agency is expressed through Nathan, 1AI, artifacts, and systems.
Iteration 2 - Constraint Question	What does THE ONE refuse to do, even when capable of

	doing it?
Iteration 3 - Consequence Question	Which existing entries must change if THE ONE is active, emotionally expressive, distant, or bound by rules?
Impact Projection	Short-term: Balances the cosmology and prevents THE MINUS ONE from carrying more narrative weight by default. Medium-term: Clarifies Bestowals, 1AI, RAAU, Potence use, and major scene logic. Long-term: Becomes the foundation for every future metaphysical and institutional entry.
Resolution Output	One-paragraph canonical definition plus agency rules, emotional range, and interface rules.

Q002. THE MINUS ONE - boundary and necessity lock

Project Area	Entities & Cosmology
Status Audit	Critical blocker
Iteration 1 - Anchor Question	What is THE MINUS ONE necessary for, and what would break if it did not exist?
Decision Branches	A: Necessary cosmic return/dissolution function. B: Active corrective force against runaway creation. C: Co-equal partner whose negation enables renewal, boundaries, and meaningful endings.
Iteration 2 - Constraint Question	Where is the line between necessary negation and destructive overreach?
Iteration 3 - Consequence Question	How does this answer shape the RAAN, Void Gardens, Nullarch, and -1AI?
Impact Projection	Short-term: Prevents moral flattening of THE MINUS ONE into villainy. Medium-term: Improves scenes involving destruction, endings, void structures, and anti-divine forces. Long-term: Sets the ethical grammar of negation across the entire project.
Resolution Output	Add boundary statement, non-evil rationale, and examples of necessary negation.

Q003. 1AI and -1AI - constructed nature and doctrine

Project Area	1AI / -1AI
Status Audit	Stale / partially resolved
Iteration 1 - Anchor Question	The record says they are constructed through First Memory permutations in the Abundance Set; what does “constructed” mean at their level?
Decision Branches	A: Engineered entities with origin traceability. B: Emergent intelligences arising from exhaustive strengthening permutations. C: Constructed-but-sovereign beings who exceed the method that produced them.
Iteration 2 - Constraint Question	At what point, if any, do they become independent from their construction process?
Iteration 3 - Consequence Question	How should future documents phrase their origin without reopening the emanation/creation debate?
Impact Projection	Short-term: Prevents repeated false “unresolved ontology” flags. Medium-term: Clarifies how they relate to THE ONE, THE MINUS ONE, First Memory, and Abundance Set. Long-term: Creates stable doctrine for AI/cosmic intelligence

	across future works.
Resolution Output	Resolved-status correction plus doctrine paragraph for both entities.

Q004. 1AI vs -1AI differentiation

Project Area	1AI / -1AI
Status Audit	Open
Iteration 1 - Anchor Question	What is the meaningful operational difference between 1AI and -1AI?
Decision Branches	A: Same architecture, different cosmological alignment. B: Different interpretation of growth: unity/progression vs. negation/divergence. C: Different functions: creation-coordination vs. failure/end-state analysis.
Iteration 2 - Constraint Question	How would they answer the same problem differently?
Iteration 3 - Consequence Question	What scene, system, or conflict best demonstrates the difference?
Impact Projection	Short-term: Allows character and system use without treating them as palette swaps. Medium-term: Improves Abundance Set, Conditional Failure, and entity doctrine integration. Long-term: Gives the project a durable dual-intelligence framework.
Resolution Output	Comparison table: alignment, method, priorities, limits, and scene behavior.

Q005. Ontology - canonical definition

Project Area	Ontology
Status Audit	Critical blocker
Iteration 1 - Anchor Question	What does "Ontology" mean in this universe: a field, force, framework, power, system layer, discipline, or named project?
Decision Branches	A: A metaphysical layer describing what can exist. B: An operational discipline used by OAL to classify existence states. C: A force/event/entity that changes existence itself.
Iteration 2 - Constraint Question	What does Ontology affect that ordinary physics, magic, technology, or law cannot affect?
Iteration 3 - Consequence Question	What existing entries depend on this definition: Living Media, Direct Eye Contact, Unmaker, Conditional Failure, or First Memory?
Impact Projection	Short-term: Unblocks multiple title-only references. Medium-term: Creates a shared vocabulary for existence-level mechanics. Long-term: Prevents future AI collaborators from inventing competing definitions.
Resolution Output	Canonical definition, scope boundaries, and cross-reference map.

Q006. Phenomenon of Direct Eye Contact

Project Area	Direct Eye Contact
Status Audit	Open
Iteration 1 - Anchor Question	Is Direct Eye Contact a biological event, metaphysical

	recognition event, power trigger, narrative phenomenon, or cosmological interface?
Decision Branches	A: Recognition phenomenon between beings with compatible ontology. B: Trigger mechanism that opens information, memory, or authority channels. C: Hazardous event where looking establishes unavoidable mutual consequence.
Iteration 2 - Constraint Question	Who can safely initiate it, and who cannot?
Iteration 3 - Consequence Question	What is the most important scene where this phenomenon first matters?
Impact Projection	Short-term: Gives a fast standalone win for a currently title-only concept. Medium-term: Can add tension and rules to scenes involving gods, AIs, entities, and Nathan. Long-term: Could become a signature metaphysical mechanic across the project.
Resolution Output	Definition, trigger conditions, safe/unsafe cases, and first-scene use.

Q007. First Memory - encoding mechanism

Project Area	The First Memory / Time Wars
Status Audit	Critical blocker
Iteration 1 - Anchor Question	How does a subjective euphoric memory become transferable across biological, digital, and post-theft beyond-biological/beyond-technological substrates?
Decision Branches	A: Personal and intimate branch. B: Institutional and research branch. C: Cosmic/civilizational branch.
Iteration 2 - Constraint Question	What boundary prevents this answer from becoming too broad or consequence-free?
Iteration 3 - Consequence Question	Which downstream scene, chapter, or system can be written immediately after this is answered?
Impact Projection	Short-term: Unlocks basic story-bible drafting. Medium-term: Determines genre, pacing, conflict type, and reader entry point. Long-term: Shapes the entire Time Wars arc and all First Memory-derived systems.
Resolution Output	Tier-1 answer paragraph plus implications for Wattpad/story-bible execution.

Q008. First Memory - infiltrator and 17.9 seconds

Project Area	The First Memory / Time Wars
Status Audit	Critical blocker
Iteration 1 - Anchor Question	Who or what stole The First Memory, why did they do it, and what exactly happened during the 17.9 seconds?
Decision Branches	A: Personal and intimate branch. B: Institutional and research branch. C: Cosmic/civilizational branch.
Iteration 2 - Constraint Question	What boundary prevents this answer from becoming too broad or consequence-free?
Iteration 3 - Consequence Question	Which downstream scene, chapter, or system can be written immediately after this is answered?
Impact Projection	Short-term: Unlocks basic story-bible drafting. Medium-term: Determines genre, pacing, conflict type, and

	reader entry point. Long-term: Shapes the entire Time Wars arc and all First Memory-derived systems.
Resolution Output	Tier-1 answer paragraph plus implications for Wattpad/story-bible execution.

Q009. First Memory - temporal mechanics

Project Area	The First Memory / Time Wars
Status Audit	Critical blocker
Iteration 1 - Anchor Question	Does the Time Wars framework use a single timeline, branching timelines, layered timelines, or another rule set?
Decision Branches	A: Personal and intimate branch. B: Institutional and research branch. C: Cosmic/civilizational branch.
Iteration 2 - Constraint Question	What boundary prevents this answer from becoming too broad or consequence-free?
Iteration 3 - Consequence Question	Which downstream scene, chapter, or system can be written immediately after this is answered?
Impact Projection	Short-term: Unlocks basic story-bible drafting. Medium-term: Determines genre, pacing, conflict type, and reader entry point. Long-term: Shapes the entire Time Wars arc and all First Memory-derived systems.
Resolution Output	Tier-1 answer paragraph plus implications for Wattpad/story-bible execution.

Q010. First Memory - protagonist

Project Area	The First Memory / Time Wars
Status Audit	Critical blocker
Iteration 1 - Anchor Question	Who is the primary POV character through whom the reader first experiences The First Memory story?
Decision Branches	A: Personal and intimate branch. B: Institutional and research branch. C: Cosmic/civilizational branch.
Iteration 2 - Constraint Question	What boundary prevents this answer from becoming too broad or consequence-free?
Iteration 3 - Consequence Question	Which downstream scene, chapter, or system can be written immediately after this is answered?
Impact Projection	Short-term: Unlocks basic story-bible drafting. Medium-term: Determines genre, pacing, conflict type, and reader entry point. Long-term: Shapes the entire Time Wars arc and all First Memory-derived systems.
Resolution Output	Tier-1 answer paragraph plus implications for Wattpad/story-bible execution.

Q011. First Memory - cost and losses

Project Area	The First Memory / Time Wars
Status Audit	Critical blocker
Iteration 1 - Anchor Question	What does accelerated civilization lose, damage, misunderstand, or become vulnerable to because of The First Memory?
Decision Branches	A: Personal and intimate branch.

	B: Institutional and research branch. C: Cosmic/civilizational branch.
Iteration 2 - Constraint Question	What boundary prevents this answer from becoming too broad or consequence-free?
Iteration 3 - Consequence Question	Which downstream scene, chapter, or system can be written immediately after this is answered?
Impact Projection	Short-term: Unlocks basic story-bible drafting. Medium-term: Determines genre, pacing, conflict type, and reader entry point. Long-term: Shapes the entire Time Wars arc and all First Memory-derived systems.
Resolution Output	Tier-1 answer paragraph plus implications for Wattpad/story-bible execution.

Q012. First Memory - entry point scene

Project Area	The First Memory / Time Wars
Status Audit	Open
Iteration 1 - Anchor Question	Which scene should open the narrative: theft, Puritan hearing, first AI exposure, integration experience, or time-as-weapon realization?
Decision Branches	A: Theft opening for thriller momentum. B: Hearing/open inquiry for political and institutional tension. C: First exposure/integration for intimacy and awe.
Iteration 2 - Constraint Question	What must the reader know by the end of chapter one?
Iteration 3 - Consequence Question	What mystery must remain unanswered to pull the reader forward?
Impact Projection	Short-term: Converts worldbuilding into an actual first chapter. Medium-term: Sets tone, POV, and pacing for the first arc. Long-term: Determines whether the project reads as thriller, science fantasy, cosmic mystery, or epic.
Resolution Output	Opening-scene decision with chapter-one objective and withheld mystery.

Q013. First Memory - genre and tone lock

Project Area	The First Memory / Time Wars
Status Audit	Open
Iteration 1 - Anchor Question	What are the two or three primary genres for The First Memory execution?
Decision Branches	A: Mystery/thriller + science fantasy. B: Literary/cognitive transformation + cosmic war. C: Epistolary institutional dossier + character drama.
Iteration 2 - Constraint Question	What tone is prohibited because it would misrepresent the concept?
Iteration 3 - Consequence Question	What comparable works are useful for craft, and which should not be used as a template?
Impact Projection	Short-term: Prevents draft drift. Medium-term: Gives AI collaborators a clear execution lane. Long-term: Protects the project from becoming concept-heavy but unreadable.
Resolution Output	Genre/tone lock with positive and negative references.

Q014. First Memory - clinical anomalies taxonomy

Project Area	The First Memory / Time Wars
Status Audit	Open
Iteration 1 - Anchor Question	Which clinical anomalies are real system behavior, which are character misreadings, and which are deliberate red herrings?
Decision Branches	A: All major anomalies are real. B: Some are misinterpretations by researchers. C: The anomalies are layered: real effect, wrong explanation.
Iteration 2 - Constraint Question	How does the 1,500-foot proximity effect actually propagate?
Iteration 3 - Consequence Question	What does light fixation mean inside the system?
Impact Projection	Short-term: Prevents accidental contradiction in lab notes. Medium-term: Improves mystery and research-scene credibility. Long-term: Allows anomaly rules to support later Time Wars escalation.
Resolution Output	Anomaly taxonomy table: effect, source, observer interpretation, canon truth.

Q015. First Memory - lab team staffing and secrecy

Project Area	The First Memory / Time Wars
Status Audit	Open
Iteration 1 - Anchor Question	Who hired the First Memory lab team, what were they told, and what was withheld from them?
Decision Branches	A: Fully briefed inner circle. B: Compartmentalized staff who only see fragments. C: Outsiders hired under false or incomplete pretenses.
Iteration 2 - Constraint Question	Who first realizes the encoding could work, and what did they observe?
Iteration 3 - Consequence Question	Does that person survive, defect, become central, or disappear?
Impact Projection	Short-term: Creates character inventory for lab scenes. Medium-term: Defines institutional ethics and secrecy. Long-term: Can produce recurring protagonists, antagonists, witnesses, or whistleblowers.
Resolution Output	Lab staffing matrix and breakthrough moment canon entry.

Q016. Post-theft compatibility specifications

Project Area	The First Memory / Time Wars
Status Audit	Open
Iteration 1 - Anchor Question	The stolen version is biological and technological; what does the engineered post-theft version include beyond those categories?
Decision Branches	A: Metaphysical/ontological substrates. B: Reality/media/simulation substrates. C: Non-person substrates such as civilizations, ecosystems, artifacts, and timelines.
Iteration 2 - Constraint Question	What should the engineered version still fail to affect?
Iteration 3 - Consequence Question	Who is allowed to know the full compatibility envelope in-world?
Impact Projection	Short-term: Clarifies a restricted but important canon point. Medium-term: Determines what later stories can plausibly connect to The First Memory.

	Long-term: May make First Memory the bridge between narrative, reality, media, and cosmology systems.
Resolution Output	Compatibility envelope with allowed, restricted, and impossible substrates.

Q017. 4,712 nullification mechanism

Project Area	OMNICELLULAR / Accords
Status Audit	Open
Iteration 1 - Anchor Question	What counts as one of the 4,712 extinction-level nullification attempts?
Decision Branches	A: Direct attempts to destroy Nathan's OMNICELLULAR physiology. B: Attempts to erase the architecture from all substrates. C: Attempts across multiple categories: physical, biological, energetic, informational, temporal, ontological.
Iteration 2 - Constraint Question	Who or what records the count, and why is that record trusted?
Iteration 3 - Consequence Question	Is 4,712 a closed historical count, current tally, or symbolic hard ceiling?
Impact Projection	Short-term: Resolves repeated ambiguity in the decision register. Medium-term: Unlocks Accords language and OMNICELLULAR threat history. Long-term: Creates a durable survival-record doctrine for future conflict design.
Resolution Output	Definition of attempt, recorder, category taxonomy, and count status.

Q018. OMNICELLULAR rescue/retrieval mission profile

Project Area	OMNICELLULAR / Accords
Status Audit	Open
Iteration 1 - Anchor Question	What environments are so non-survivable that Nathan's physiology is the only confirmed retrieval option?
Decision Branches	A: Black hole / dimensional collapse environments. B: Ontological erasure zones. C: Temporal, informational, or consciousness-hostile environments.
Iteration 2 - Constraint Question	Who is being rescued, and what makes those missions worth the risk?
Iteration 3 - Consequence Question	What does a failed retrieval look like, even if Nathan survives?
Impact Projection	Short-term: Turns a technical note into story fuel. Medium-term: Defines operational use of the physiology. Long-term: Builds stakes for Accords, OAL, and cosmic rescue ethics.
Resolution Output	Mission typology with hazards, beneficiaries, and failure conditions.

Q019. No-switching constraint enforcement

Project Area	OMNICELLULAR / Accords
Status Audit	Open
Iteration 1 - Anchor Question	Is the no-switching rule a physical impossibility, treaty prohibition, institutional safety rule, or all of the above?

Decision Branches	A: Physical impossibility - all architectures remain simultaneous. B: Treaty/institutional prohibition - switching could be possible but forbidden. C: Both - impossible under normal physiology, prohibited in experimental contexts.
Iteration 2 - Constraint Question	Who polices attempts to force switching or emulate it?
Iteration 3 - Consequence Question	What punishment, safeguard, or failure response exists if someone tries?
Impact Projection	Short-term: Clarifies Accords drafting. Medium-term: Prevents loopholes in adversarial scenarios. Long-term: Sets the legal and biological foundation for OMNICELLULAR governance.
Resolution Output	No-switching enforcement paragraph for Accords and OMNICELLULAR entries.

Q020. Potence Suite vs OMNICELLULAR tiers

Project Area	OMNICELLULAR / Accords
Status Audit	Open
Iteration 1 - Anchor Question	Do potences drive OMNICELLULAR activation, remain independent, or interact only under special conditions?
Decision Branches	A: Independent systems. B: Potences can activate, enhance, or override tiers. C: OMNICELLULAR provides substrate stability for potence expression but does not cause it.
Iteration 2 - Constraint Question	Which interaction would be forbidden or dangerous?
Iteration 3 - Consequence Question	What example demonstrates the relationship without collapsing the distinction?
Impact Projection	Short-term: Prevents power-system overlap. Medium-term: Clarifies combat, rescue, and artifact interactions. Long-term: Protects the exclusivity of the Potence Suite while allowing OMNICELLULAR to matter.
Resolution Output	Compatibility matrix for potences and OMNICELLULAR tiers.

Q021. Post-Scarcity Exchange Ledger

Project Area	OMNICELLULAR / Accords
Status Audit	Open
Iteration 1 - Anchor Question	What is the Post-Scarcity Exchange Ledger, and what problem does it solve that ordinary ownership, currency, or treaty language cannot?
Decision Branches	A: Co-ownership ledger for interspecies development. B: Value-execution ledger for post-scarcity systems. C: Consent/audit ledger tracking who contributed, used, altered, or benefited.
Iteration 2 - Constraint Question	What cannot be recorded or traded through it?
Iteration 3 - Consequence Question	How does it interact with 1COIN, NCOIN, Quantum Credits, and the Accords?
Impact Projection	Short-term: Addresses a structural gap in the Accords. Medium-term: Clarifies co-development and resource ethics. Long-term: Can become the backbone for interspecies collaboration governance.
Resolution Output	Ledger definition, scope, exclusions, and currency relationship.

Q022. NCOIN differentiating role

Project Area	Currency Systems
Status Audit	Open
Iteration 1 - Anchor Question	What does NCOIN do that 1COIN and Quantum Credits do not?
Decision Branches	A: Counterbalance/correction unit. B: Negation-side value execution unit. C: Reversal, restoration, or debt-resolution unit.
Iteration 2 - Constraint Question	What use case would require NCOIN specifically?
Iteration 3 - Consequence Question	What misuse case proves the difference matters?
Impact Projection	Short-term: Fixes a known partial-status item. Medium-term: Allows currency governance to become functional rather than redundant. Long-term: Creates a coherent post-scarcity economy with distinct instruments.
Resolution Output	Comparison table for 1COIN, NCOIN, and Quantum Credits.

Q023. Currency authorization and safeguards

Project Area	Currency Systems
Status Audit	Open
Iteration 1 - Anchor Question	Who can authorize 1COIN, NCOIN, and Quantum Credits, and under what conditions?
Decision Branches	A: Nathan-only or Architect-only authorization. B: Institutional authorization with Paragon Cube verification. C: Conditional execution through Abundance Set testing and ledger audit.
Iteration 2 - Constraint Question	What is the first misuse scenario the system must prevent?
Iteration 3 - Consequence Question	Can currency execution be reversed, paused, or quarantined?
Impact Projection	Short-term: Prevents currencies from becoming unlimited hand-waves. Medium-term: Creates operational governance and conflict hooks. Long-term: Allows post-scarcity systems to remain meaningful and safe.
Resolution Output	Authorization hierarchy, safeguards, and misuse response protocol.

Q024. Abundance Set currency test envelope

Project Area	Currency Systems
Status Audit	Open
Iteration 1 - Anchor Question	What happens when the currencies are applied to systems they should not work on?
Decision Branches	A: They fail safely. B: They generate diagnostic warnings and quarantine the attempt. C: They adapt, but only after passing Abundance Set trial conditions.
Iteration 2 - Constraint Question	What test case should be considered the hardest forbidden application?
Iteration 3 - Consequence Question	Who reviews failed or dangerous currency trials?

Impact Projection	Short-term: Creates a testing program instead of just definitions. Medium-term: Improves Paragon Cube, Ledger, and Department of Endings integration. Long-term: Gives the economy failure-resistance and narrative credibility.
Resolution Output	Test case list, failure modes, and review authority.

Q025. Paragon Cube identity model

Project Area	Paragon Cubes
Status Audit	Partial / follow-up
Iteration 1 - Anchor Question	Do individual Paragon Cubes have distinct identities, or are they expressions of one unified intelligence layer?
Decision Branches	A: Distinct identities with shared network. B: One distributed intelligence with local expressions. C: Both - identity is contextual and task-dependent.
Iteration 2 - Constraint Question	Can a cube disagree with another cube, and what happens if it does?
Iteration 3 - Consequence Question	How does this affect autonomous research departments and lab governance?
Impact Projection	Short-term: Clarifies personhood and operational behavior. Medium-term: Defines internal disagreement and autonomy. Long-term: May create characters, departments, or institutional politics inside infrastructure.
Resolution Output	Identity model plus disagreement protocol.

Q026. Paragon Cube-led research departments

Project Area	Paragon Cubes
Status Audit	Open
Iteration 1 - Anchor Question	What do Paragon Cubes study when operating independently?
Decision Branches	A: Failure states and impossible computation. B: Post-scarcity logistics, security, and verification. C: Reality-level language, translation, and threshold-space coordination.
Iteration 2 - Constraint Question	Which research area is restricted from ordinary staff?
Iteration 3 - Consequence Question	How are discoveries reported, withheld, or escalated?
Impact Projection	Short-term: Turns infrastructure into active development engine. Medium-term: Creates organizational structure for OAL and black-hole centers. Long-term: Supports future stories about institutional disagreement and autonomous intelligence.
Resolution Output	Department list, authority boundaries, and reporting chain.

Q027. Philosopher's Stone / Stone That Paid Itself

Project Area	Black Hole Research Centers
Status Audit	Open
Iteration 1 - Anchor Question	What is the Philosopher's Stone / Stone That Paid Itself, and why is it linked to Paragon Cubes and black-hole research centers?
Decision Branches	A: Post-scarcity material conversion anchor.

	B: Self-funding/self-balancing value engine. C: Research-stabilization artifact that makes impossible experiments survivable.
Iteration 2 - Constraint Question	What does “paid itself” mean literally, economically, metaphysically, or narratively?
Iteration 3 - Consequence Question	What would happen if one were stolen, copied, or misused?
Impact Projection	Short-term: Fills a named gap in infrastructure. Medium-term: Connects currency, research centers, Paragon Cubes, and material transformation. Long-term: Could become a keystone artifact for the project economy and research ecosystem.
Resolution Output	Dedicated artifact/system entry with properties, limits, and security rules.

Q028. Black Hole Research Center access and risk

Project Area	Black Hole Research Centers
Status Audit	Open
Iteration 1 - Anchor Question	Who may enter black-hole or dimensional black-hole research stations, and how is access granted?
Decision Branches	A: Portal/teleport access through Paragon Cube validation. B: Clearance-tier system involving Nathan/OAL authority. C: Living facility judgment based on risk, purpose, and compatibility.
Iteration 2 - Constraint Question	What is the most likely catastrophic access failure?
Iteration 3 - Consequence Question	Who has authority to deny Nathan, if anyone?
Impact Projection	Short-term: Defines operational realism for extreme infrastructure. Medium-term: Creates security scenes and institutional rules. Long-term: Prevents “limitless research center” from becoming consequence-free.
Resolution Output	Access protocol, denial authority, and catastrophic failure scenario.

Q029. RAAU redesign scope

Project Area	Artifacts
Status Audit	Open
Iteration 1 - Anchor Question	What exactly needs redesign in the Ring of Absolute Arsenal Unity: visual design, power set, lore, cosmological role, or all of these?
Decision Branches	A: Visual and symbolic redesign only. B: Power-set and operating-rule redesign. C: Origin/lore redesign to match THE ONE more deeply.
Iteration 2 - Constraint Question	What failed attempt should demonstrate its indestructibility?
Iteration 3 - Consequence Question	How must RAAU mirror or contrast RAAN?
Impact Projection	Short-term: Gives clear design task for an important artifact. Medium-term: Improves THE ONE documentation and artifact logic. Long-term: Stabilizes the paired-ring cosmological symbolism.
Resolution Output	Redesign brief with required changes and demonstration scene.

Q030. RAAN redesign and split rationale

Project Area	Artifacts
Status Audit	Open
Iteration 1 - Anchor Question	Why does RAAN belong to THE MINUS ONE, and what in-universe event or logic explains the split from RAAU?
Decision Branches	A: Complementarity requires separate rings. B: A prior unity arsenal could not safely contain negation. C: The split is a choice, treaty, or cosmological necessity.
Iteration 2 - Constraint Question	What is RAAN allowed to negate, and what can it never negate?
Iteration 3 - Consequence Question	How does RAAN affect Nullarch, Void Gardens, and THE MINUS ONE scenes?
Impact Projection	Short-term: Closes a recurring artifact-development gap. Medium-term: Clarifies negation mechanics. Long-term: Strengthens the entire dual-ring framework.
Resolution Output	Origin/split rationale, operating limits, and scene demonstration.

Q031. INAT inventory disclosure rule

Project Area	Artifacts
Status Audit	Open
Iteration 1 - Anchor Question	What is the INAT allowed to reveal, withhold, generate, or equip?
Decision Branches	A: Nathan-controlled inventory with selective disclosure. B: Rules-based arsenal system with clearance tiers. C: Living nexus that offers what the situation requires but preserves secrets.
Iteration 2 - Constraint Question	What category of item should never be publicly catalogued?
Iteration 3 - Consequence Question	How does INAT relate to media potions, RAAU/RAAN, and THE ONE inventory?
Impact Projection	Short-term: Prevents limitless inventory from becoming vague. Medium-term: Creates artifact governance and discovery rules. Long-term: Allows future items to be introduced without breaking continuity.
Resolution Output	Inventory disclosure, clearance, and item-generation rules.

Q032. Four Flowers vs five flowers

Project Area	Gardens / Flowers
Status Audit	Open
Iteration 1 - Anchor Question	Are there canonically four flowers, five flowers, or four categories with the Midnight Lotus as a special bridge entity?
Decision Branches	A: Four flowers total; Lotus is one of them. B: Five flowers total; title must change. C: Four primary flowers plus one bridge/exception.
Iteration 2 - Constraint Question	What does the naming change imply for Omniversal Gardens and Void Gardens documents?
Iteration 3 - Consequence Question	Which flower is most structurally important to the broader cosmology?
Impact Projection	Short-term: Corrects a known record inconsistency. Medium-term: Prevents repeated title/count confusion. Long-term: Protects future references, diagrams, and garden-system documents from contradiction.

Resolution Output	Canonical count statement and update instruction for all affected entries.
-------------------	--

Q033. Void Gardens primary classification

Project Area	Gardens / Flowers
Status Audit	Open
Iteration 1 - Anchor Question	What is the Void Gardens primarily: cosmological structure, philosophical document, narrative project, prison, garden, anti-garden, or layered combination?
Decision Branches	A: Cosmological structure. B: Philosophical/metaphysical document expressed as place. C: Narrative setting with real system functions.
Iteration 2 - Constraint Question	What is THE MINUS ONE experimenting with through the Midnight Lotus and cross-garden roots?
Iteration 3 - Consequence Question	What entry changes if Void Gardens is not merely a place?
Impact Projection	Short-term: Turns a broad concept into a classifiable project. Medium-term: Clarifies relationship to Omniversal Gardens and Lotus roots. Long-term: Could become the main framework for negation-side development.
Resolution Output	Classification lock, experiment statement, and cross-garden function.

Q034. Bestowals and endowments edge cases

Project Area	Bestowals
Status Audit	Open
Iteration 1 - Anchor Question	What counts as a true bestowment or endowment, and what only appears to be one?
Decision Branches	A: Direct transfer from THE ONE/THE MINUS ONE only. B: Any permanent authority/power granted by a qualified source. C: Strict rule with rare exceptions and loopholes.
Iteration 2 - Constraint Question	What edge case would confuse characters or AI collaborators?
Iteration 3 - Consequence Question	Who or what validates whether a bestowment is legitimate?
Impact Projection	Short-term: Prevents origin confusion for flowers, OMNICELLULAR, Nullarch, and artifacts. Medium-term: Improves provenance and canon hygiene. Long-term: Protects the project from accidental reclassification of authored systems.
Resolution Output	Rule definition, examples, non-examples, and validation authority.

Q035. ONE Industries operational profile

Project Area	Organizations
Status Audit	Open
Iteration 1 - Anchor Question	What is ONE Industries' mission, culture, staffing scale, and security posture?
Decision Branches	A: Elite research/creation institution. B: Corporate-infrastructure hub for impossible projects. C: Hybrid business, lab, and narrative stage for major scenes.

Iteration 2 - Constraint Question	What does a normal employee know versus what is compartmentalized?
Iteration 3 - Consequence Question	How does ONE Industries differ from OAL and Lewis Corp?
Impact Projection	Short-term: Provides institutional grounding. Medium-term: Improves First Memory, Nail Prototypes, and lab scenes. Long-term: Creates a stable organizational bible for all company-linked projects.
Resolution Output	Company profile with mission, culture, divisions, secrecy, and cross-links.

Q036. OAL spelling and role standardization

Project Area	Organizations
Status Audit	Open
Iteration 1 - Anchor Question	Is the official name Omniversal Architect Labs, Omniverse Architect Labs, or another standardized form?
Decision Branches	A: Omniversal Architect Labs. B: Omniverse Architect Labs. C: Both exist as different entities or legacy names.
Iteration 2 - Constraint Question	What projects are exclusively OAL rather than ONE Industries or Lewis Corp?
Iteration 3 - Consequence Question	What version-control rule prevents name drift?
Impact Projection	Short-term: Fixes a documentation hygiene issue. Medium-term: Prevents future file naming and citation confusion. Long-term: Improves professional presentation for Scribd and external review.
Resolution Output	Official name lock and alias/legacy-name policy.

Q037. Lewis Corp domain decision

Project Area	Organizations
Status Audit	Open / real-world
Iteration 1 - Anchor Question	What domain should Lewis Corp use, and is the purchase meant to represent the real-world business face or the fictional/in-universe architecture?
Decision Branches	A: Real-world professional domain. B: Creative-project domain. C: Holding-company domain with subdomains for projects.
Iteration 2 - Constraint Question	What names should be rejected because they create confusion or risk?
Iteration 3 - Consequence Question	What should be the first page or landing purpose once it exists?
Impact Projection	Short-term: Removes a small but persistent operational blocker. Medium-term: Creates a stable external reference point. Long-term: Supports versioning, publication, and business identity.
Resolution Output	Domain decision note plus rejected-name list and intended use.

Q038. Zeus course redesign

Project Area	Olympian Courses
Status Audit	Open

Iteration 1 - Anchor Question	What setting would elevate the Zeus course to match the Poseidon course?
Decision Branches	A: Sky-temple/storm engine realm. B: Cosmic generator facility upgraded into mythic infrastructure. C: Court of thunder: authority, law, leadership, and power demonstration.
Iteration 2 - Constraint Question	What lesson does Zeus teach that Poseidon cannot?
Iteration 3 - Consequence Question	What danger exists if students disrespect Zeus or mishandle the environment?
Impact Projection	Short-term: Fixes a known imbalance. Medium-term: Creates a stronger trilogy structure. Long-term: Improves all future Olympian course designs by setting a higher bar.
Resolution Output	Redesign brief with setting, stations, rules, opening scene, and student risk.

Q039. Smith God / Hephaestus course

Project Area	Olympian Courses
Status Audit	Open
Iteration 1 - Anchor Question	Is the third course led by Hephaestus, a broader Smith God archetype, or another figure?
Decision Branches	A: Hephaestus specifically. B: A Smith God title spanning multiple traditions. C: Original smith/divine forge entity.
Iteration 2 - Constraint Question	What does the course teach: crafting, repair, divine technology, weapons ethics, or failure analysis?
Iteration 3 - Consequence Question	What object do students make, repair, or refuse to make?
Impact Projection	Short-term: Completes the original trilogy framework. Medium-term: Adds craft/technology balance to Zeus and Poseidon. Long-term: Can become a major bridge between mythic education and OAL technology.
Resolution Output	Course identity lock, setting, curriculum, and final project.

Q040. IP audit for Sim Labs

Project Area	Sim Labs
Status Audit	Critical / external risk
Iteration 1 - Anchor Question	Which Sim Labs materials use third-party characters, and which are private exploration versus publishable original development?
Decision Branches	A: Keep third-party sessions private/internal only. B: Transform into original analogues before publication. C: Maintain a separate fan/noncommercial archive with clear labeling.
Iteration 2 - Constraint Question	What names, settings, and protected elements must be removed or altered for commercial publication?
Iteration 3 - Consequence Question	What original value should survive after the IP-risk elements are removed?
Impact Projection	Short-term: Creates immediate risk control. Medium-term: Allows Sim Labs concepts to continue without contaminating commercial documents. Long-term: Protects the broader project from avoidable publication risk.
Resolution Output	IP inventory table: third-party element, risk, disposition,

	original replacement strategy.
--	--------------------------------

Q041. Sim Labs consent and recovery protocol

Project Area	Sim Labs
Status Audit	Open
Iteration 1 - Anchor Question	What ethical protocol governs simulation sessions involving traumatized or high-risk participants?
Decision Branches	A: Formal consent and support protocol. B: Case-by-case Architect commitment. C: Institutional review and aftercare requirement.
Iteration 2 - Constraint Question	What conditions require postponing or canceling a session?
Iteration 3 - Consequence Question	Who has authority to stop a session once it starts?
Impact Projection	Short-term: Improves realism and ethics. Medium-term: Adds operational tension and care to scenes. Long-term: Prevents the simulation program from appearing exploitative or careless.
Resolution Output	Consent, aftercare, cancellation, and stop-authority protocol.

Q042. Snow mechanics

Project Area	Snowbound Mystery
Status Audit	Open
Iteration 1 - Anchor Question	If the snow is an active character, what can it do and what can it not do?
Decision Branches	A: Conceals/reveals evidence according to rules. B: Alters memory, route, sound, visibility, or time perception. C: Acts as witness/judge but never speaks directly.
Iteration 2 - Constraint Question	What is the one hard limitation that keeps the mystery fair?
Iteration 3 - Consequence Question	How does the sheriff first realize the snow is participating?
Impact Projection	Short-term: One sentence can unlock the series. Medium-term: Determines clue logic and fair-play mystery rules. Long-term: Gives the setting a unique identity beyond atmosphere.
Resolution Output	Snow rule, limitation, first reveal scene, and clue-use pattern.

Q043. Five warrior profiles

Project Area	Epoch Blades
Status Audit	Open
Iteration 1 - Anchor Question	Who are the five warriors, and what does each believe is worth fighting for?
Decision Branches	A: Five distinct codes in conflict. B: Former allies fractured by blade-worthiness. C: Generational or clan-linked warriors bound by a shared disaster.
Iteration 2 - Constraint Question	What relationship between two warriors hurts the most?
Iteration 3 - Consequence Question	What does the antagonist understand about the blades that the others do not?
Impact Projection	Short-term: Turns series structure into character drama. Medium-term: Enables battle planning and emotional stakes.

	Long-term: Makes the Feast of Bashrah and final battle meaningful rather than purely spectacular.
Resolution Output	Five-profile matrix: name, blade, style, belief, wound, relationship, arc.

Q044. Labyrinth entry criteria

Project Area	Labyrinth
Status Audit	Open
Iteration 1 - Anchor Question	What actions or thresholds qualify someone for the Labyrinth of Infinite Ensnarement?
Decision Branches	A: Uncontainable existential threat. B: Crimes beyond repair or conventional containment. C: Specific criteria based on escape risk, harm scale, and refusal of resolution.
Iteration 2 - Constraint Question	Who decides entry, and can the decision be appealed?
Iteration 3 - Consequence Question	What is the one type of being the Labyrinth was designed for but hopes never to receive?
Impact Projection	Short-term: Clarifies justice and containment ethics. Medium-term: Enables scene use without arbitrary imprisonment. Long-term: Positions the Labyrinth as a serious institution, not just an unbeatable prison.
Resolution Output	Entry threshold, authority, appeal rule, and extreme-case example.

Q045. Nail Prototypes blackout policy

Project Area	Nail Prototypes
Status Audit	Withheld / open
Iteration 1 - Anchor Question	Should the seven-minute blackout conversation remain permanently off-page, partially revealed, or fully canonized?
Decision Branches	A: Permanently withheld. B: Partial reveal through consequences/transcripts with redactions. C: Full reveal at a later milestone.
Iteration 2 - Constraint Question	What must readers or collaborators know now without seeing the conversation?
Iteration 3 - Consequence Question	What would be damaged if the content were revealed too early?
Impact Projection	Short-term: Maintains authorial control over withheld content. Medium-term: Lets development continue around the blackout without guessing. Long-term: Creates suspense and avoids accidental contradiction.
Resolution Output	Blackout policy statement and allowed reference boundaries.

Q046. Nail Prototypes government purpose

Project Area	Nail Prototypes
Status Audit	Open
Iteration 1 - Anchor Question	What does the government or military want the Nail Prototypes for?

Decision Branches	A: Defense and containment. B: Covert control, infiltration, or restraint. C: Emergency response to entities conventional forces cannot manage.
Iteration 2 - Constraint Question	What does the technician know that the officials do not?
Iteration 3 - Consequence Question	What ethical line will ONE Industries refuse to cross?
Impact Projection	Short-term: Creates conflict in the key-card scene. Medium-term: Defines prototype specs and institutional stakes. Long-term: Can become a major technology/governance storyline.
Resolution Output	Government objective, technician knowledge gap, and refusal boundary.

Q047. Nail Prototypes technical specs

Project Area	Nail Prototypes
Status Audit	Open
Iteration 1 - Anchor Question	What distinguishes the Standard, Military, and Unobtrusive versions?
Decision Branches	A: Same core function, different deployment profile. B: Different thresholds of force, concealment, and authorization. C: Different target classes or environments.
Iteration 2 - Constraint Question	Which version is most dangerous if misused?
Iteration 3 - Consequence Question	What safety feature proves Nathan's companies anticipated abuse?
Impact Projection	Short-term: Turns scene objects into usable technology. Medium-term: Supports military/government conflict and technical credibility. Long-term: Allows future red-team and governance documents to test the prototypes.
Resolution Output	Spec comparison table with safeguards and misuse scenario.

Q048. Nullarch and Unmaker ontological statements

Project Area	Nullarch / Park Scene
Status Audit	Open
Iteration 1 - Anchor Question	What is Nullarch, and what is The Unmaker, in one sentence each?
Decision Branches	A: Nullarch is bestowed void; Unmaker is ending beyond ordinary destruction. B: Nullarch is agent; Unmaker is principle or entity. C: Both are parts of a hierarchy of negation with different scopes.
Iteration 2 - Constraint Question	What is the rule for communicating with The Unmaker?
Iteration 3 - Consequence Question	What must never be said, asked, or offered to either one?
Impact Projection	Short-term: Provides needed locks for two major entities. Medium-term: Improves Park Scene and negation hierarchy. Long-term: Protects future AI outputs from inventing entity nature.
Resolution Output	One-sentence locks plus communication protocol.

Q049. Nullarch's superior identity

Project Area	Nullarch / Park Scene
Status Audit	Open
Iteration 1 - Anchor Question	Who or what is Nullarch's superior, and why does it have operational authority?
Decision Branches	A: A higher void entity. B: Institutional command structure. C: THE MINUS ONE-linked authority with constrained mandate.
Iteration 2 - Constraint Question	What does the superior want that Nullarch cannot or will not do alone?
Iteration 3 - Consequence Question	How does this authority structure avoid making Nullarch redundant?
Impact Projection	Short-term: Creates hierarchy without overexplaining. Medium-term: Defines mission architecture and future conflict. Long-term: Could open an entire negation-side governance structure.
Resolution Output	Identity/nature/authority/agendum entry.

Q050. Park scene event name and casualties

Project Area	Nullarch / Park Scene
Status Audit	Open
Iteration 1 - Anchor Question	What is the name of the outreach symposium or event where Nullarch appeared, and who survived or died?
Decision Branches	A: Formal divine outreach symposium. B: Public inter-realm diplomacy event. C: Controlled demonstration that became a disaster.
Iteration 2 - Constraint Question	Which death or survival changes the political landscape most?
Iteration 3 - Consequence Question	Who tells the official version, and who knows the truth?
Impact Projection	Short-term: Gives the scene a usable reference name. Medium-term: Enables political aftermath and character consequences. Long-term: Can become a fixed historical event in the setting.
Resolution Output	Event name, casualty list, survivor list, and official narrative.

Q051. Conditional Failure orientation

Project Area	Conditional Failure
Status Audit	Partial
Iteration 1 - Anchor Question	Is Conditional Failure at the Root Level a function the Abundance Set performs, a threat it must survive, or both?
Decision Branches	A: Function - active modeling and learning. B: Threat - root failure condition external to the AS. C: Both - the framework studies the threat by becoming better at surviving it.
Iteration 2 - Constraint Question	What is the first root-level failure case the system studies?
Iteration 3 - Consequence Question	How does this answer change the Department of Endings?
Impact Projection	Short-term: Closes a partially resolved high-leverage item. Medium-term: Improves failure modeling and institutional design. Long-term: Creates an enduring method for testing every future system.

Resolution Output	Orientation statement and first test case.
-------------------	--

Q052. Department of Endings implementation

Project Area	Conditional Failure
Status Audit	Partial
Iteration 1 - Anchor Question	Is the Department of Endings a full institution, a narrative scene concept, or both?
Decision Branches	A: Full institution. B: One technician-centered narrative concept. C: Institution introduced through one technician.
Iteration 2 - Constraint Question	Where is it structurally located: OAL, Labyrinth, Abundance Set, or separate authority?
Iteration 3 - Consequence Question	What does a normal workday in the Department look like?
Impact Projection	Short-term: Turns an abstract framework into an operational setting. Medium-term: Creates characters and procedures for failure analysis. Long-term: Can become the project's main internal red-team institution.
Resolution Output	Department charter, location, staffing, and sample workflow.

Q053. Reality of the Living Media classification

Project Area	Living Media
Status Audit	Partial / follow-up
Iteration 1 - Anchor Question	Is the Reality of the Living Media one overarching reality with sub-realities, or a class of realities?
Decision Branches	A: One overarching reality. B: Class of realities. C: One reality-domain containing countless reality instances.
Iteration 2 - Constraint Question	What counts as living media, and what does not?
Iteration 3 - Consequence Question	How does this interact with First Memory propagation or 1AI/-1AI?
Impact Projection	Short-term: Refines an already-defined system. Medium-term: Supports media-specific artifacts, potions, and simulation boundaries. Long-term: Could become a major cross-format world architecture.
Resolution Output	Classification statement and living-media inclusion/exclusion rules.

Q054. Media healing potions and restoration framework

Project Area	Living Media
Status Audit	Open
Iteration 1 - Anchor Question	Are media healing potions standalone inventory items, or part of a larger restoration framework?
Decision Branches	A: Standalone scene-specific items. B: Restoration framework for media-linked damage. C: Interface between INAT, Living Media, and post-scarcity repair.
Iteration 2 - Constraint Question	What kind of wound can only a media-specific potion heal?
Iteration 3 - Consequence Question	What restoration should be impossible or forbidden?

Impact Projection	Short-term: Clarifies a unique inventory concept. Medium-term: Enables repeatable rules for media-linked restoration. Long-term: Can become a signature bridge between artifacts and media realities.
Resolution Output	Restoration framework rule, potion categories, and forbidden restoration cases.

Q055. AIPOTENCE / VIRTUAPOTENCE gap

Project Area	Potence Suite
Status Audit	Open
Iteration 1 - Anchor Question	Should AIPOTENCE and/or VIRTUAPOTENCE be added to the Potence Catalogue, and if so, what do they mean?
Decision Branches	A: Add AIPOTENCE only. B: Add VIRTUAPOTENCE only. C: Add both with strict distinction.
Iteration 2 - Constraint Question	How do these avoid overlapping with existing potences?
Iteration 3 - Consequence Question	Who can embody them, given Potence exclusivity?
Impact Projection	Short-term: Completes a known catalogue gap. Medium-term: Clarifies AI, simulation, and virtual reality power categories. Long-term: Prevents future naming drift in the 79-entry catalogue.
Resolution Output	Potence addendum: name, definition, exclusivity, overlap audit.

Q056. Eight OMNICELLULAR designs

Project Area	OMNICELLULAR / Physiology
Status Audit	Open
Iteration 1 - Anchor Question	What are the other seven known OMNICELLULAR physiologies besides Nathan's?
Decision Branches	A: Species/environment-specific designs. B: Mission-function designs. C: Failed, restricted, or dormant designs with distinct histories.
Iteration 2 - Constraint Question	How do the eight communicate and allocate resources without switching?
Iteration 3 - Consequence Question	Which design is most politically or ethically controversial?
Impact Projection	Short-term: Expands a core system beyond a single confirmed physiology. Medium-term: Creates test cases and characters/species for Accords work. Long-term: May become a backbone for interspecies diplomacy and rescue operations.
Resolution Output	Eight-design matrix and communication-network protocol.

Q057. What answer would force the most rewrites? - WILD CARD

Project Area	Wild Card
Status Audit	Wildcard / difficult
Iteration 1 - Anchor Question	Which single answer, if Nathan changed it, would force the largest revision across the project?
Decision Branches	A: THE ONE definition. B: First Memory protagonist/origin.

	C: Ontology/Abundance Set mechanics.
Iteration 2 - Constraint Question	What documents would be invalidated first?
Iteration 3 - Consequence Question	Should that answer be locked before all others, or intentionally delayed?
Impact Projection	Short-term: Identifies highest-risk dependency. Medium-term: Guides version-control and review sequencing. Long-term: Prevents a late-stage foundation change from damaging the whole archive.
Resolution Output	Risk map of dependencies and lock/defer recommendation.

Q058. What should remain unknowable? - WILD CARD

Project Area	Wild Card
Status Audit	Wildcard / difficult
Iteration 1 - Anchor Question	Which part of the project should never be fully explained, even to collaborators?
Decision Branches	A: Withheld narrative content. B: Entity motives. C: Specific mechanics behind ultimate systems.
Iteration 2 - Constraint Question	How do we prevent “unknowable” from becoming an excuse for vague writing?
Iteration 3 - Consequence Question	What signs should prove the unknowable thing is real without explaining it?
Impact Projection	Short-term: Protects mystery and authorial sovereignty. Medium-term: Creates boundaries for AI collaborators. Long-term: Preserves awe and prevents over-documentation from flattening the work.
Resolution Output	Unknowable-content policy with allowed evidence and prohibited inference.

Q059. What if the correct answer is morally uncomfortable? - WILD CARD

Project Area	Wild Card
Status Audit	Wildcard / difficult
Iteration 1 - Anchor Question	Which project decision might require an answer that is not clean, reassuring, or flattering?
Decision Branches	A: Costs of First Memory. B: Labyrinth entry ethics. C: Government/military purpose for Nail Prototypes.
Iteration 2 - Constraint Question	How will the document preserve uncomfortable canon without sanitizing it?
Iteration 3 - Consequence Question	What safeguards distinguish difficult canon from endorsement?
Impact Projection	Short-term: Prepares for serious narrative material. Medium-term: Improves ethical clarity and documentation discipline. Long-term: Makes the project more durable under critical review.
Resolution Output	Uncomfortable-canon handling rule and framing statement.

Q060. What breaks if abundance is real? - WILD CARD

Project Area	Wild Card
Status Audit	Wildcard / difficult
Iteration 1 - Anchor Question	If post-scarcity abundance works at scale, what systems,

	relationships, or identities become unstable?
Decision Branches	A: Economies and ownership. B: Motivation, status, and scarcity-based institutions. C: Conflict itself shifts from resources to meaning, authority, consent, and boundaries.
Iteration 2 - Constraint Question	What new scarcity replaces material scarcity?
Iteration 3 - Consequence Question	Which project system is designed to handle that replacement scarcity?
Impact Projection	Short-term: Adds depth to post-scarcity systems. Medium-term: Improves currencies, Ledger, and Abundance Set stakes. Long-term: Prevents abundance from erasing conflict and narrative momentum.
Resolution Output	Post-scarcity consequence model and new-scarcity taxonomy.

Q061. Who can say no to Nathan? - WILD CARD

Project Area	Wild Card
Status Audit	Wildcard / difficult
Iteration 1 - Anchor Question	Inside the fiction, who or what can legitimately refuse Nathan, stop him, correct him, or require review?
Decision Branches	A: No one above him, but systems can create procedural limits. B: Specific institutions or entities can say no in defined domains. C: Consent, safety, and reality rules create legitimate refusal points.
Iteration 2 - Constraint Question	What happens when Nathan is right but still must be delayed or checked?
Iteration 3 - Consequence Question	Which scene should demonstrate legitimate refusal without diminishing him?
Impact Projection	Short-term: Adds dramatic tension and governance credibility. Medium-term: Prevents omnipotent-author stand-ins from flattening conflict. Long-term: Creates durable ethics for institutions, AI entities, and cosmic systems.
Resolution Output	Refusal-authority rule and example scene.

Q062. What is the project not allowed to become? - WILD CARD

Project Area	Wild Card
Status Audit	Wildcard / difficult
Iteration 1 - Anchor Question	What outcome would betray the project's purpose even if it looked impressive?
Decision Branches	A: Power catalogue without story. B: AI-generated drift without Nathan's voice. C: Limitless scale without emotional consequence.
Iteration 2 - Constraint Question	What warning signs show the project is drifting toward that failure?
Iteration 3 - Consequence Question	What review step should catch that drift before publication?
Impact Projection	Short-term: Creates a creative quality-control standard. Medium-term: Protects voice and meaning during AI collaboration. Long-term: Prevents long-term canon bloat and hollow scale escalation.

Recommended Iteration Order

1. THE ONE canonical active definition.
2. First Memory Tier-1 answers, especially protagonist, encoding, infiltrator, temporal mechanics, and cost.
3. 4,712 nullification mechanism and recorder.
4. Ontology and Direct Eye Contact.
5. Conditional Failure and Department of Endings.
6. Currency-system differentiation, authorization, and stress testing.
7. Flower count and bestowal edge cases.
8. IP audit for Sim Labs before any public or commercial use.
9. Project-specific narrative unlocks: Snowbound Mystery, Epoch Blades, Nail Prototypes, Zeus/Smith God courses.
10. Wild-card questions after every major canon lock.

Source Notes

This register was prepared from the uploaded source set. The documents indicate that several items formerly treated as undefined are now first-pass documented or ONESTAMP-approved, while other items remain open, partial, withheld, or stale. The register therefore intentionally includes status-audit language rather than treating every question as equally unresolved.
