

PROJECT DEVELOPMENT LOG · REVIEW INSTRUMENT

DIVINE RESEARCH BRIEF

Review of Unified AI Responses, Design Bible, and OAL Framework

Divinity · Potence · Physiology · Aura · Bestowment · Creator-Class · Divine Flower

Status: RESEARCH BRIEF. Not new cosmology. Existing project constraints are labeled CANON. Comparative findings are labeled RESEARCH. Unlocked mechanics are labeled CANDIDATE. Overreaches from prior AI passes are labeled CATEGORY ERROR.

Prepared after review of the 90-page unified response packet, DIVINITY DESIGN BIBLE, and Divine Architecture Framework (OAL).

1. What This Document Is

The packet you supplied is not one finished system. It is three kinds of work stacked together: a correct research assignment, portable comparative findings, and premature project application.

This brief does four jobs:

- Review the source packet and say what each document got right or wrong.
- Adopt the standing research assignment (ChatGPT sections I–XI) as the official brief.
- Separate CANON, RESEARCH, CANDIDATE, and CATEGORY ERROR so later design does not treat hypotheses as recovered law.
- Give the collaboration team a portable toolkit plus a locked list of open canon decisions.

Labeling rule (use on every future log entry)

Label	Meaning	May lock into canon?
CANON	Already established in the development log	Already locked
RESEARCH	Historical, theological, or media finding	No — analog only
CANDIDATE	Proposed mechanic not yet ratified	Only after a formal decision
CATEGORY ERROR	Research mixed with unauthorized project design	Must not be treated as canon

2. Source Review

2.1 Unified Responses packet (90 pages)

The packet repeats itself (the ChatGPT block appears twice; the Grok bible is pasted in). Treat it as a dossier, not as linear canon. The usable spine is: ChatGPT's re-engineered prompt (I–XI), ChatGPT's execution, a later methodological correction, and excerpts of other model output.

What ChatGPT got right

- Divinity is an ontological classification, not a power level. Power can follow divinity; power does not prove divinity.
- Do not collapse: divinity = power; aura = divinity; immortality = godhood; bestowment = apotheosis; Creator status = deity status; created-by-a-god = divine.
- Mesopotamian melammu: transferable radiance on gods, kings, temples, objects, and monsters. Aura can be bestowed or withdrawn without the bearer becoming a god. RESEARCH.
- Independent transfer channels (potence, ability, knowledge, access, authority, jurisdiction, protection, immortality, physiology, aura, essence, office, domain, divinity-itself, creative authority) must not be bundled.
- Apotheosis is a multi-stage process whose order can vary. Aura before ontology is possible. Authority without godhood is possible.
- Inheritance splits three ways: biological, ontological, authority. They need not travel together.
- Immortality stack: agelessness ≠ deathlessness ≠ indestructibility ≠ ontological persistence.
- Dependency depth D0–D7 is a usable registry field.
- Divine Physiology and Creator Manifestation Architecture should be separate documents.
- Aura layers (signature, potence, authority, domain, presence, environment, protection, operative) plus suppression states, including Absent-by-nature.
- God of War lesson: pantheons can coexist without identical physiology or death-rules. Deity can participate in world-state, not just theme-attack.
- Flower constraint honored: created for the Gardens / Four Flowers, not a direct bestowment from THE ONE or THE MINUS ONE. CANON constraint.
- Flower functions listed as CANDIDATES A–I, with infrastructure Stabilizer as the most architecture-worthy option.
- ONE vs MINUS ONE as establish-versus-negate is labeled a candidate grammar, not recovered law. Correct discipline.

What the later correction in the packet got right

A subsequent pass in the same packet identifies a real category error in both ChatGPT's more speculative paragraphs and the Grok bible:

- The research task is to learn portable concepts so you can later design project structures.
- The research task is not to decide how THE ONE, THE MINUS ONE, the two Universes, or the Divine Flower presently work.
- Assigning "ONE = surplus/emanation" and "MINUS ONE = deficit/inversion" as operating systems is a new cosmological axiom, not a research finding.
- Standing rule to adopt: CONCEPT RESEARCH BEFORE PROJECT APPLICATION.

That correction is accepted. This brief obeys it.

2.2 DIVINITY DESIGN BIBLE (Grok, prior pass)

Keep as a toolkit. Do not treat Parts 7–8 as locked cosmology.

Keep (portable)

- Divinity as a bundle of axes (ontology, origin, scope, world-relation, dependence, death-mode, transfer).
- Theological operating systems as analogs: henotheism, panentheism, emanation, demiurgy, belief-economy.
- Physiology types A–H as design templates, not as assignments to named project entities.
- Aura grades 0–5 as a presence scale.
- Transfer protocols P1–P8 as a menu of mechanisms.
- Creator checklist: from what, by what act, remaining how.
- Media contrast: Olympian caste + energy tank vs Norse fate-bound organism vs Gaiman belief-metabolism.

Category errors (do not lock)

- Declaring THE ONE UNIVERSE “surplus / participation / emanation” and THE MINUS ONE UNIVERSE “deficit / inversion / subtraction” as if research had decided that.
- Treating the Divine Flower as an organ of THE ONE or as opposed nectar hardware for the two Universes. That fights recovered Garden canon.
- Writing simulation laws for MINUS Creators (ban on P1, etc.) as if they were already project physics.

Reclassification: Parts 7–8 of the bible are CANDIDATE grammars only. They may be used in a later design assignment. They are not current canon.

2.3 Divine Architecture Framework (OAL)

Short, disciplined, and compatible with this brief.

- Source-type typology: innate/ontological, earned/ascended, belief-sustained, bestowed, Creator-class-as-author-of-typology. RESEARCH / useful.
- Creator-class is not “the strongest innate god.” It sits outside the typology as the thing that authors the typology. RESEARCH-derived design principle.
- Physiology models: Substrate, Domain-Body, Non-Corporeal/Projected. Aligns with ChatGPT’s physiology vs manifestation split.
- Aura components: radius, recognition, environmental bleed, domain signature, suppressibility. Compatible with ChatGPT layers.
- Bestowment = act (generally revocable, carries signature). Endowment = constitutive state (generally not revocable without unmaking). Compatible with ChatGPT’s event → state rule.
- Section 6 correctly flagged ONE vs MINUS ONE dimensions as REPORTED, not resolved. That is the right status.
- Open OAL question to keep: does bestowment grant new authority, or only reveal/activate authority the recipient already latently held? This must be reconciled with the existing Authority Principle before any conferral mechanic is locked.

3. Standing Research Assignment

Adopt ChatGPT's re-engineered prompt as the official assignment text. Compressed here. Use the full I–XI list when commissioning another model.

Objective

Understand the mechanics by which an entity can be divine; become divine; be created divine; possess ancestry without complete godhood; ascend; receive authority without becoming a deity; receive power without receiving physiology; possess a divine body; manifest radiance; bestow attributes; endow a person, object, location, species, realm, or reality; create subordinate gods; create independent gods; create Creator-class entities; or produce entities that outrun ordinary godhood language.

Hard non-equations

- divinity ≠ power
- divine aura ≠ divinity
- immortality ≠ godhood
- bestowment ≠ apotheosis
- Creator status ≠ deity status
- created by a divine entity ≠ automatically divine

Source classes to keep separate

Historical religious concepts; theological or philosophical concepts; mythology; fictional adaptations of mythology; modern fictional inventions; analytical inference; proposed project mechanics. Do not present fictional adaptations as authentic historical mythology.

Required deliverable set (for any full execution)

Executive summary; research findings; taxonomy of godhood; physiology taxonomy; aura architecture; bestowment/endowment architecture; apotheosis pathways; Creator-class design framework; comparative mythology; God of War case study; American Gods case study; ONE UNIVERSE candidate architecture (labeled CANDIDATE); MINUS ONE UNIVERSE candidate architecture (labeled CANDIDATE); Divine Flower design questions; contradictions; recommendations for future canon decisions; glossary; sourced list.

4. Recovered Project Constraints (CANON)

Only items with support in the supplied packet as already-established development material are listed here. Nothing else is promoted.

Constraint	Status
THE ONE is a Beyond Omniversal Ultimate Entity associated with creation / order / unity.	CANON (as stated in packet)
THE MINUS ONE is its complementary necessary counterpart associated with negation / chaos / void — not a simple good/evil pair.	CANON (as stated in packet)
“Multiverse” is subordinate terminology for these structures, not a synonym for the total architecture.	CANON (project policy in packet)
Architecture includes THE ONE, THE MINUS ONE, THE ONE UNIVERSE, THE MINUS ONE UNIVERSE, Omniversal Gardens, Divine Flower, Divine Potence, Creator-level entities.	CANON scope
Four Flowers belong to the Gardens architecture.	CANON
The Divine Flower and the other Garden flowers were created for the Gardens, not as direct bestowments from THE ONE or THE MINUS ONE.	CANON — do not overwrite
Divine Flower is associated with a restricted Gardens divine / Elysian area and described as possessing a divine glow.	CANON (descriptive)
THE ONE UNIVERSE and THE MINUS ONE UNIVERSE must not be presumed to use identical divine machinery.	CANON requirement
OAL: Invocation is an ontological act. Authority is framed as recognized, not merely granted. Reconcile conferral mechanics with this before locking bestowment-of-authority.	CANON-adjacent (OAL)

Explicitly not canon: surplus-versus-deficit as locked physics; Flower as body-organ of THE ONE; Flower nectar as apotheosis potion; any claim that THE ONE “gave the Flower divine power.”

5. Portable Research Toolkit

This section is RESEARCH and CANDIDATE menu. It does not assign any item to THE ONE, THE MINUS ONE, or the Flower.

5.1 What divinity can be

Investigate independently: ontological state; species; substance; mode of existence; authority class; source-relationship; cosmic office; transcendence; reality-level; participation in an essence; intrinsic / acquired / inherited / bestowed / relational-to-worship property. Usually it is a bundle, not one of these.

Creator-class attributes that actually discriminate from “very strong god”: aseity, necessity vs contingency, causal independence, whether reality is inside the entity, whether it authors laws rather than occupying a domain, whether it can originate other Creators. Omnipotence, omniscience, and immortality can describe high gods without describing Creators.

5.2 Taxonomy of how godhood happens

- Native — divine from inception.
- Primordial — predates or coincides with cosmic order; may be being, place, substance, and concept at once.
- Inherited — descent, partial thresholds, hybridization. Not necessarily genetics.
- Apotheosized — non-god becomes divine. Not the same as receiving power.
- Invested — appointed to a divine office. Office, holder, or both may be divine.
- Emanated — proceeds from a source; independence is a separate variable.
- Avataric / incarnated / aspected — one source, multiple local faces.
- Artificially created — made by craft, rite, or engine.
- Worship-generated / belief-dependent — Gaiman egregore.
- Parasitic or appropriated — stolen office, stolen radiance, stolen name.
- Dead, fallen, or forgotten — ontology may persist after cult, office, or body fails.
- Creator / demiurge / architect / beyond-godhood — do not collapse these four.

5.3 Source-type typology (OAL, keep)

Type	Power source	Implication
Innate / ontological	The entity is the domain	Killing is replacement or transformation, not deletion of the principle
Earned / ascended	Threshold crossed	Vulnerability often sits at the mortal/divine seam
Belief-sustained	Worship / attention	Divinity is an economy; starvation is possible
Bestowed	Granted top-down	Revocable; carries granter signature
Creator-class	Authors the ruleset others occupy	Not a bigger Olympian by default

5.4 Physiology — questions, not assignments

For any divine body model, specify: aging, disease, injury, regeneration thresholds (wound / organ / head / disintegration / soul / concept / erasure), reproduction, heredity, hybridization, consumption, sleep, senses, transformation, possession, soul-body relation, realm-link, law-link, distributed existence.

Menu of models: biological-divine species; immortal-but-destructible; conditional immortality; regenerating; divine-matter; energy; spiritual; conceptual; metaphysical; avatar-of-external-consciousness; multiple simultaneous bodies; core-dependent; realm-linked; law-linked; no conventional physiology (Creator manifestation only).

OAL three-model shortcut: Substrate (mortal frame + divine layer; seam is a weak point); Domain-Body (health tracks domain health); Non-Corporeal / Projected (killable mask, not killable source).

Immortality stack (lock as vocabulary)

- Agelessness — does not age.
- Deathlessness — ordinary death does not apply.
- Indestructibility — body or form cannot be broken by listed means.
- Ontological persistence — the identity continues if body, cult, name, or world-state is destroyed.

God of War RESEARCH: franchise gods are typically protected from ordinary natural death, not absolutely unkillable. Greek deaths can wreck world-systems (deity ↔ domain ↔ world-state). Norse membership does not imply Olympian tissue.

5.5 Aura architecture

RESEARCH principle from melammu: aura is evidence of divine interaction, not proof of divine identity. Kings, temples, weapons, and monsters can carry splendor.

Layers

- 1 Signature — what is this? Hard to counterfeit among peers.
- 2 Potence — how much / what kind of power. Need not reveal identity.
- 3 Authority — what is it allowed to do. A messenger may outrank a stronger being.
- 4 Domain — which principle (death, war, order, negation...).
- 5 Presence field — observer reaction: awe, terror, calm, compulsion, overload, submission.
- 6 Environmental field — local world-state changes.
- 7 Protective — rejects hostile influence.
- 8 Operative — the aura itself acts.

Suppression states

- Unrestricted / Attenuated / Masked / Disguised / Sealed / Absent-by-nature.

Absent-by-nature is the Creator-grade narrative device: the strongest presence in the room registers as nothing because lower-order detectors have no category for it. CANDIDATE, not assigned.

Also specify: range, residue, theft, imitation, contamination, amplification, interference, cross-system perceptibility.

Grade scale 0–5 from the Grok bible (Latent → Numen → Veiled → Full presence → Unveiled flare → Creator weather) can sit on top of the eight layers as intensity, not as a replacement.

5.6 Bestowment and endowment

Bestowment — the transaction / event.

Endowment — the resulting persistent property, capability, office, resource, or condition.

Therefore: Bestowment event → Endowment state. The event does not automatically confer divinity.

Nearby terms to keep unbundled: blessing, empowerment, investiture, consecration, anointing, infusion, inheritance, awakening, ascension, apotheosis, incarnation, emanation, delegation, authorization, covenant, pact, possession, transformation, ontological rewriting.

Independent channels (do not gift as a kit)

Potence; ability; knowledge; access; authority; jurisdiction; protection; immortality (specify which of the four immortality properties); physiology; aura; essence; office; domain; worship-rights; creative authority; the ontological property of divinity itself.

Reversibility

- Generally revocable: office, access, authority-grant, aura-loan, potence-charge.
- Generally hard to revoke without unmaking: constitutive endowment, inherited ontology, authored nature.
- OAL question still open: grant versus recognition of latent authority.

Apotheosis pathway (variable order)

Candidate → Qualification → Trigger → Ontological transition → Stabilization → Authority recognition → Aura emergence → Physiological integration → Divine state. Any step can be skipped, reordered, or refused. Someone may wear aura without ontology. Someone may hold office without becoming a god.

Protocol menu from the bible (CANDIDATE names only)

P1 Participation / theosis. P2 Office investiture. P3 Substance gift. P4 Charge transfer. P5 Belief crystallization. P6 Ordeal-unlock. P7 Inversion / extraction. P8 Seed / bloom. Use as a catalog when a later design pass needs named pipes. Do not pre-assign P1 to THE ONE or P7 to THE MINUS ONE.

5.7 Creator-class process

Do not start with a power list. Answer origin before abilities.

- What is it? Originated or created? Necessary or contingent? Does it require a cause?
- Is it inside reality, or is reality inside / subordinate to it?
- Does it have a body? Is that body the entity or a mask? Can it exist without the mask?
- Does it create matter, spacetime, natural law, metaphysical law, souls, gods, other Creators?
- Can it grant independent creative authority? Revoke creations? Can creations become independent?
- Can it alter its own ontology? What, if anything, threatens continuity?

Distinguish: high-powered deity; supreme deity; creator god; reality architect; Creator-class entity. A Creator that possesses creative authority inherently is not the same metaphysical object as a god to whom that authority was granted.

5.8 Comparative media (analog only)

Olympian / God of War Greek

Caste plus energy plus office. World-state can be bolted to the god's life. True-form radiance can kill. Charge can be drained. Patricide cycle, not scheduled cosmology-end. RESEARCH analog.

Norse / God of War Norse

Aging, maintenance fruit, fate-bound, scheduled end. Power often paid by ordeal. Aesir and Vanir are not one physiology. RESEARCH analog.

American Gods

Belief as metabolism. Migration changes form. New passions spawn new gods. Land outlasts gods. Gives Dependent divinity as a real godhood type, which is still not aseity. RESEARCH analog.

Architectural lesson, not template: different cultural systems can coexist in one setting with different death-rules. That supports the project requirement that the two Universes need not share machinery. It does not tell you what that machinery is.

6. Candidate Grammars for the Two Universes

Everything in this section is CANDIDATE. It is recorded because the packet already contains a strong pair of hypotheses. It is not ratified.

6.1 Affirmative vs subtractive ontology

ONE-style candidate: a missing property is established. Recipient lacks $X \rightarrow$ bestowment $\rightarrow X$ exists as part of recipient. Pipeline: Source $\rightarrow$ Bestowment $\rightarrow$ Integration $\rightarrow$ Stabilization $\rightarrow$ Endowment. Mechanisms: origination, affirmation, integration, stabilization, authorization, propagation.

MINUS ONE-style candidate: a limiting condition is nullified. Mortality = TRUE is not overwritten by Immortality = TRUE; Mortality is set NULL. Outcomes can look similar and are not equivalent. The recipient was not given immortality; the condition that made death inevitable was removed.

Negative bestowment examples (CANDIDATE language)

- Remove mortality rather than grant immortality.
- Remove localization rather than grant teleportation.
- Remove temporal restriction rather than grant time travel.
- Remove physical limitation rather than grant strength.
- Remove singularity rather than grant duplication.
- Remove causal restriction rather than grant reality manipulation.
- Remove ontological dependency rather than grant independence.

This is the cleanest way to obey the packet's warning: similar end states do not require similar mechanisms, and THE MINUS ONE must not be "THE ONE with black effects."

6.2 Side-by-side candidate table

Question	ONE candidate	MINUS ONE candidate
Primary operation	Establish	Negate
Transformation	Add property	Remove constraint
Creation	Origination	Structured absence / negation
Immortality	Endow continued life	Remove mortality
Divinity	Establish divine nature	Remove non-divine limitation
Aura	Generate presence	Generate absence / negative presence
Authority	Grant permission	Remove prohibition
Protection	Add resistance	Remove vulnerability
Apotheosis	Construct divine state	Eliminate conditions preventing it

MINUS ONE aura candidate: observers detect the entity through missing information — sensors return null, prophecy skips the location, divination discontinuities, causality hard to trace, peers perceive a hole. Not a standard shadow glow.

6.3 Four dimensions still unresolved (from OAL §6)

- Directionality — additive vs subtractive.
- Signature polarity — does a MINUS conferral carry inverted or absent signature?
- Auditability — does MINUS ONE have an Invocation-style audit layer, or is unauditability the point?
- Physiology default — Substrate vs Non-Corporeal as a universe signature rather than a personal choice?

7. Divine Flower — Questions, Not Functions

CANON reminder: the Flower is a Garden / Four Flowers object created for the Gardens. Do not write that THE ONE gave it divine power.

The correct design question is: what was built into the Flower at creation?

Questions that must be answered before function is locked

- Why is it called Divine?
- Does it contain divinity, produce divinity, or only recognize divinity?
- Does it affect existing gods?
- Can it confer physiology, aura, authority, or ontology — and which channels, separately?
- Can it initiate apotheosis, or only catalyze a process that may fail?
- Does effect differ by recipient class?
- Finite or inexhaustible potency? Hereditary? Reversible?
- Can it affect Creator-level beings?
- Does function differ by reality or simulation instance?

Candidate functions (A-I) — not selected

ID	Candidate	What it would mean
A	Recognition	Detects divinity; grants nothing
B	Amplification	Strengthens properties already present; mortals gain little
C	Compatibility induction	Makes the recipient safe for divine forces; not apotheosis
D	Aura endowment	Confers radiance without godhood (melammu analog)
E	Physiological endowment	Changes body architecture; still ≠ godhood
F	Apotheosis catalyst	Starts a process; does not supply divinity
G	Divinity seed	Installs latent architecture that may develop
H	Authority recognition	Authenticates an existing office
I	Stabilizer / infrastructure	Lets divine entities manifest safely inside the Gardens

Recommendation, not canon: Candidate I (Stabilizer) plus C (Compatibility) give the Flower a role worthy of the Gardens without turning it into an eat-this-and-become-a-god device. A, D, and H are compatible add-ons. F and G should stay locked behind a later explicit decision because they collapse too many channels.

Do not use the prior bible's "root = Source / Void, opposed nectar" model as current description. That was project application ahead of research, and it collides with Garden-creation canon.

8. Contradictions and Open Decisions

Contradictions found in the packet

- Flower as Garden infrastructure (CANON) vs Flower as organ of THE ONE / opposed-universe nectar engine (Grok bible, CATEGORY ERROR).
- ONE/MINUS mechanics as hypotheses to investigate (ChatGPT prompt IX) vs ONE/MINUS mechanics as already-assigned algebras (Grok bible Part 7).
- Authority as recognized, not granted (OAL) vs authority as a bestowable channel (ChatGPT channel list). These can coexist if recognition and grant are different pipes. They cannot coexist if one document pretends they are the same act.
- Packet says do not invent final Flower function; same packet then lists nine functions. Status is CANDIDATE list, not menu-already-chosen.

Decisions that must be ratified before Creator-entity design

- Which immortality properties apply at which tier.
- Whether conferral of authority is a grant, a recognition, or both with different signatures.
- Whether THE ONE and THE MINUS ONE are even to be classified with ordinary godhood words.
- Whether the two Universes use the affirmative/subtractive grammar, a different pair, or mixed local laws inside each Universe.
- Whether aura-absent-by-nature is permitted for Ultimates.
- Flower function set (recommend starting with I + C; forbid silent promotion of F/G).
- Can a Creator photocopy Creator-status? Default RESEARCH advice: no, or Creators become a species.
- Registry fields to adopt now: source-type, dependency depth D0-D7, immortality stack, aura layers present, conferral channels held, revocability.

9. Recommendations

- Adopt this brief as the research-phase control document.
- Keep the Design Bible as Appendix toolkit (types, grades, protocols). Stamp Parts 7–8 CANDIDATE.
- Keep the OAL Framework as the Creator-build checklist plus the grant-vs-recognition question.
- Commission the next work as one of the following, not as another general essay: (1) divinity registry schema; (2) conferral-channel specification with revocability matrix; (3) Flower decision memo choosing among A–I; (4) ONE / MINUS ONE grammar ratification using the candidate table; (5) a single Creator-class entity run through ChatGPT's 20 questions without inventing Universe physics.
- Any future model output that assigns properties to THE ONE, THE MINUS ONE, or the Flower must label them CANDIDATE unless citing a ratified log entry.

Recommended Divine Potence vocabulary (CANDIDATE terms)

- DIVINE POTENCE — capacity associated with the divine, not identical to being divine.
- DIVINE NATURE — ontological classification.
- DIVINE AUTHORITY — legitimate right to an act or jurisdiction.
- DIVINE PHYSIOLOGY — body or form architecture.
- CREATOR MANIFESTATION — interface body that is not the entity.
- BESTOWMENT / ENDOWMENT — event / resulting state.
- APOTHEOSIS — ontological transition into divine status.
- NEGATIVE BESTOWMENT — capability produced by removing a constraint.

10. Glossary (working)

- Aseity — existence not dependent on another cause. Creator discriminator.
- Melammu — Mesopotamian transferable divine splendor. Aura analog that can sit on non-gods.
- Theosis — participation in divine energies without becoming the essence.
- Apotheosis — elevation into divine status.
- Demiurge — craftsman of given materials or templates; not automatically the Absolute.
- Egregore / belief-god — divinity metabolized from attention.
- Numen — claimed presence of a place or office, weaker than full epiphany.
- Enargeia — full, unmistakable presence.
- Dependency depth — D0 necessary through D7 temporary; registry field.
- Four Flowers / Omniversal Gardens — project structures; Flower is Garden-made.

11. Source List

This brief is a review instrument. Primary inputs:

- Unified Responses for Divine Research (user compilation of model outputs, including ChatGPT I–XI and execution).
- DIVINITY DESIGN BIBLE (prior Grok pass) — toolkit retained; Parts 7–8 demoted to CANDIDATE.
- Divine Architecture Framework (OAL working reference).
- Comparative analogs cited inside those documents: classical theism (aseity, simplicity); Plotinian emanation; Palamite essence/energies; Homeric/Hellenistic epiphany and Semele; Iamblichus on graded apparitions; Mesopotamian melammu; Norse mortality, Idunn, wyrd, Ragnarök; God of War Greek/Norse split; Gaiman, American Gods.

Full academic citation pass belongs in a later research-findings volume, not in this control brief.

End of research brief. Next authorized step is a numbered decision memo, not another general divinity essay.
