

Enterprise Autonomous Management Architecture

EAMA

Version 2.0 - Reference Manual

Volume I - Architectural Foundations

Canonical Enterprise Architecture and Organizational Operating Framework

**FORMAL DOCUMENT SKELETON
CONTROLLED DEVELOPMENT COPY**

Prepared for canonical development and multi-system review

Status: Unapproved working skeleton

Date: July 2026

Document Control

Document Title	Enterprise Autonomous Management Architecture (EAMA) Version 2.0 - Reference Manual
Volume	Volume I - Architectural Foundations
Document Type	Canonical Enterprise Architecture and Organizational Operating Framework
Artifact Type	Formal document skeleton / controlled development copy
Owner / Approving Authority	Nathan Lewis
Current Status	Unapproved working skeleton
Version	2.0-SKEL-01
Canonical Baseline	EAMA foundational framework v1.2 and approved addenda
Review Method	Multi-AI development-team review followed by author approval
Approval Requirement	Electronic signature and ONESTAMP by the approving authority
Distribution	Controlled review copy; future publication status reserved
Confidentiality Classification	Fictional/speculative development material; classification reserved
Supersedes	No approved v2.0 volume; establishes initial structural baseline
Next Review Gate	Completion of Chapter 1-5 initial drafts and glossary seed registry

Revision History

Version	Date	Prepared By	Change Summary	Approval Status
2.0-SKEL-01	July 2026	ChatGPT with Nathan Lewis direction	Initial formal Volume I skeleton	Pending author review
2.0-DRAFT-01	Reserved	Reserved	First content-bearing draft	Reserved
2.0-RC-01	Reserved	Reserved	Release candidate	Reserved
2.0	Reserved	Nathan Lewis	Approved canonical release	Reserved

Approval Record

Approval Element	Required Entry	Status
Author Review	Full-document review by Nathan Lewis	Reserved
Electronic Signature	Applied after final approval	Reserved
ONESTAMP	Applied after electronic signature	Reserved

Document Status Legend

- **Reserved:** Space or concept intentionally held for future canonical development.
- **Provisional:** Draft content permitted for development but not yet authoritative.
- **Canonical:** Approved terminology or architecture entered into the Management Systems Canon.
- **Superseded:** Previously canonical content replaced through controlled change management.
- **Retired:** Content intentionally removed from active use but retained in historical records.

Table of Contents

Update the table of contents in Word.

Note: Update this field in Microsoft Word after substantive drafting or revision.

How to Use This Skeleton

- This skeleton establishes the approved structural baseline for EAMA Version 2.0, Volume I. It is not yet the final reference manual.
- Each chapter contains required objectives, drafting prompts, minimum content expectations, controlled placeholders, and reserved canonical-development sections.
- Bracketed or shaded drafting language must be replaced or formally retained before release-candidate review.
- New terms must be entered into the provisional glossary registry and mapped to the Management Systems Canon before approval.
- No specialized domain implementation should redefine foundational terms established in Volume I without a controlled amendment.

Volume I Completion Criteria

Requirement	Required Content	Status	Canonical Reference
Structural completeness	All fifteen chapters populated and internally cross-referenced.	Reserved	To be assigned
Terminology control	All authoritative terms registered in the glossary and canon.	Reserved	To be assigned
Architectural coherence	Philosophy, models, governance, relationships, and style rules agree.	Reserved	To be assigned
Traceability	Major provisions traceable to approved v1.x foundations or identified as new v2.0 canon.	Reserved	To be assigned
Review readiness	No unexplained placeholders, broken references, or unresolved contradictions.	Reserved	To be assigned
Approval readiness	Final author review, electronic signature, and ONESTAMP fields prepared.	Reserved	To be assigned

Chapter 1 - Foreword

Chapter Objective: Establish the purpose, historical transition, and significance of EAMA Version 2.0 as a new class of document.

Required Outcomes

- **Required themes:** Transition from domain discovery to architectural formalization; role of Volume I as constitutional foundation; relationship to v1.0-v1.2.
- **Voice:** Authoritative but accessible; no detailed technical specifications.
- **Reserved inclusions:** Author statement; development-team acknowledgment; publication context; canonical provenance statement.

Required Section Structure

1. Purpose of the Chapter
2. Normative Scope
3. Foundational Definitions
4. Architectural Provisions
5. Required Models and Artifacts
6. Cross-Chapter Dependencies
7. Canonical Decisions
8. Open Questions and Reserved Matters
9. Conformance and Review Criteria
10. Future Development Notes

Drafting Prompts

Prompt 1: What changed between the foundational framework and the reference-manual phase?

Prompt 2: Why is Volume I treated as the constitutional foundation?

Prompt 3: What development history should be acknowledged without turning the Foreword into a chronology?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Replace this block with approved chapter text. Preserve unresolved issues in the Open Questions register rather than embedding uncertainty into normative provisions.

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 2 - Scope

Chapter Objective: Define what Volume I governs, what it does not govern, and how it relates to later volumes and specialized canon.

Required Outcomes

- **In scope:** Foundational definitions, models, governance, interoperability, relationships, documentation rules, canon control, versioning.
- **Out of scope:** Full domain specifications, implementation procedures, operational deployments, detailed fictional technologies.
- **Boundary rule:** Volume I defines architecture inherited by all later volumes unless formally exempted.

Required Section Structure

11. Purpose of the Chapter
12. Normative Scope
13. Foundational Definitions
14. Architectural Provisions
15. Required Models and Artifacts
16. Cross-Chapter Dependencies
17. Canonical Decisions
18. Open Questions and Reserved Matters
19. Conformance and Review Criteria
20. Future Development Notes

Drafting Prompts

Prompt 1: What authority does Volume I claim over later volumes?

Prompt 2: Which implementation details must remain outside this volume?

Prompt 3: How are fictional canon examples separated from universal architecture?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Replace this block with approved chapter text. Preserve unresolved issues in the Open Questions register rather than embedding uncertainty into normative provisions.

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 3 - Universal Disclaimer

Chapter Objective: Provide the one-size-fits-all speculative, fictional, non-claim disclaimer governing the entire reference manual.

Required Outcomes

- **Required protections:** No claim of real-world control, deployment, authority, classified capability, AI control, human control, institutional influence, or existing technology.
- **Interpretive rule:** All advanced systems are conceptual, fictional, speculative, or long-horizon design constructs unless explicitly identified otherwise.
- **Placement:** Full disclaimer here; abbreviated notice may appear in each volume and specialized addendum.

Required Section Structure

21. Purpose of the Chapter
22. Normative Scope
23. Foundational Definitions
24. Architectural Provisions
25. Required Models and Artifacts
26. Cross-Chapter Dependencies
27. Canonical Decisions
28. Open Questions and Reserved Matters
29. Conformance and Review Criteria
30. Future Development Notes

Drafting Prompts

Prompt 1: What interpretations must the disclaimer explicitly prohibit?

Prompt 2: How should the disclaimer remain broad enough for future volumes?

Prompt 3: Which shorter disclaimer may be reused in derivatives?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 4 - Architectural Philosophy

Chapter Objective: Define the underlying worldview and reasoning from which all EAMA structures derive.

Required Outcomes

- **Required principles:** Unified information, context preservation, modular expansion, human-centered operation, progressive intelligence, interoperability, traceability, controlled autonomy, canon stability.
- **Core question:** Why should an organization be modeled as an interconnected system of management domains rather than isolated applications?
- **Reserved doctrine:** Statements on scale, complexity, abstraction, post-contemporary capability, and constitutional architecture.

Required Section Structure

31. Purpose of the Chapter
32. Normative Scope
33. Foundational Definitions
34. Architectural Provisions
35. Required Models and Artifacts
36. Cross-Chapter Dependencies
37. Canonical Decisions
38. Open Questions and Reserved Matters
39. Conformance and Review Criteria
40. Future Development Notes

Drafting Prompts

Prompt 1: What assumptions about organizations, information, intelligence, and coordination underlie EAMA?

Prompt 2: Which values are non-negotiable?

Prompt 3: How does EAMA balance autonomy with oversight?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 5 - Design Principles

Chapter Objective: Translate architectural philosophy into binding design rules and evaluation criteria.

Required Outcomes

- **Rule format:** Principle name; normative statement; rationale; implications; exceptions; verification criteria.
- **Minimum topics:** Modularity, composability, discoverability, provenance, least ambiguity, observability, resilience, controlled evolution, accessibility, separation of concerns.
- **Conformance:** Define how later domains demonstrate compliance or document justified deviation.

Required Section Structure

41. Purpose of the Chapter
42. Normative Scope
43. Foundational Definitions
44. Architectural Provisions
45. Required Models and Artifacts
46. Cross-Chapter Dependencies
47. Canonical Decisions
48. Open Questions and Reserved Matters
49. Conformance and Review Criteria
50. Future Development Notes

Drafting Prompts

Prompt 1: Which principles are mandatory, preferred, or contextual?

Prompt 2: How will conformance be assessed?

Prompt 3: How are conflicts between principles resolved?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Replace this block with approved chapter text. Preserve unresolved issues in the Open Questions register rather than embedding uncertainty into normative provisions.

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 6 - Enterprise Architecture Model

Chapter Objective: Define the top-level structural model of EAMA and its major architectural layers.

Required Outcomes

- **Required layers:** Enterprise domains, management systems, services, modules, interfaces, protocols, doctrines, integration layers, artifacts, relationships.
- **Required views:** Structural, operational, governance, information, lifecycle, trust, and stakeholder views.
- **Reserved diagram:** Canonical EAMA layer model and high-level architecture map.

Required Section Structure

51. Purpose of the Chapter
52. Normative Scope
53. Foundational Definitions
54. Architectural Provisions
55. Required Models and Artifacts
56. Cross-Chapter Dependencies
57. Canonical Decisions
58. Open Questions and Reserved Matters
59. Conformance and Review Criteria
60. Future Development Notes

Drafting Prompts

Prompt 1: What are the canonical layers and viewpoints?

Prompt 2: How do domains differ from systems and services?

Prompt 3: What diagrams are required to make the model understandable?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 7 - Organizational Operating Framework

Chapter Objective: Explain how EAMA translates architecture into persistent organizational operation.

Required Outcomes

- **Required concerns:** Decision flow, work coordination, authority distribution, resource orchestration, institutional memory, operational continuity, human-AI collaboration, organizational states.
- **Distinction:** Clarify difference between enterprise architecture and organizational operating framework.
- **Reserved model:** Operating loop from sensing to interpretation, decision, execution, observation, learning, and adaptation.

Required Section Structure

61. Purpose of the Chapter
62. Normative Scope
63. Foundational Definitions
64. Architectural Provisions
65. Required Models and Artifacts
66. Cross-Chapter Dependencies
67. Canonical Decisions
68. Open Questions and Reserved Matters
69. Conformance and Review Criteria
70. Future Development Notes

Drafting Prompts

Prompt 1: How does the organization continuously sense, decide, act, learn, and adapt?

Prompt 2: How are people, AI, information, and infrastructure coordinated?

Prompt 3: What operational states must be recognized?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Replace this block with approved chapter text. Preserve unresolved issues in the Open Questions register rather than embedding uncertainty into normative provisions.

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 8 - Management System Model

Chapter Objective: Define the universal model inherited by every management domain and subsystem.

Required Outcomes

- **Core deliverable:** The universal domain template and rules for completing every field.
- **Classification:** Domain, system, subsystem, service, module, interface, protocol, artifact, integration layer.
- **Conformance:** No domain chapter may omit a required field without a documented exception.

Required Section Structure

71. Purpose of the Chapter
72. Normative Scope
73. Foundational Definitions
74. Architectural Provisions
75. Required Models and Artifacts
76. Cross-Chapter Dependencies
77. Canonical Decisions
78. Open Questions and Reserved Matters
79. Conformance and Review Criteria
80. Future Development Notes

Drafting Prompts

Prompt 1: What is the minimum complete definition of a management system?

Prompt 2: Which template fields are universal?

Prompt 3: How are exceptions documented?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Replace this block with approved chapter text. Preserve unresolved issues in the Open Questions register rather than embedding uncertainty into normative provisions.

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 9 - Interoperability Architecture

Chapter Objective: Define how systems exchange information, services, authority, context, and operational state.

Required Outcomes

- **Required dimensions:** Semantic, technical, operational, governance, trust, temporal, identity, and lifecycle interoperability.
- **Interface contracts:** Inputs, outputs, preconditions, postconditions, error states, version compatibility, provenance obligations.
- **Reserved standards:** Canonical interface specification, event envelope, identity model, and cross-domain context package.

Required Section Structure

81. Purpose of the Chapter
82. Normative Scope
83. Foundational Definitions
84. Architectural Provisions
85. Required Models and Artifacts
86. Cross-Chapter Dependencies
87. Canonical Decisions
88. Open Questions and Reserved Matters
89. Conformance and Review Criteria
90. Future Development Notes

Drafting Prompts

Prompt 1: What must every interface disclose?

Prompt 2: How are context and provenance preserved across boundaries?

Prompt 3: How does interoperability degrade safely?

Canonical Development Workspace

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 10 - Architectural Relationships

Chapter Objective: Define the relationship graph connecting all recognized EAMA components.

Required Outcomes

- **Relationship types:** Depends on, supports, governs, constrains, supplies, consumes, inherits from, integrates with, observes, audits, supersedes.
- **Required representation:** Human-readable relationship statements plus machine-tractable relationship registry.
- **Reserved artifact:** Canonical architectural relationship graph and adjacency matrix.

Required Section Structure

91. Purpose of the Chapter
92. Normative Scope
93. Foundational Definitions
94. Architectural Provisions
95. Required Models and Artifacts
96. Cross-Chapter Dependencies
97. Canonical Decisions
98. Open Questions and Reserved Matters
99. Conformance and Review Criteria
100. Future Development Notes

Drafting Prompts

Prompt 1: Which relationship verbs are canonical?

Prompt 2: How are circular dependencies and conflicts represented?

Prompt 3: What registry format should support human and machine use?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Chapter Control Record

Chapter Status	Reserved / Not drafted	Primary Owner	Reserved
Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 11 - Governance Architecture

Chapter Objective: Define authority, stewardship, decision rights, policy control, exception handling, and architectural oversight.

Required Outcomes

- **Required roles:** Approving authority, architecture steward, domain owner, canon registrar, reviewer, auditor, change sponsor.
- **Required mechanisms:** Decision records, policy hierarchy, exception process, conflict resolution, escalation, audit, retirement.
- **Reserved doctrine:** Absolute vs delegated authority; immutable vs amendable provisions; emergency governance states.

Required Section Structure

101. Purpose of the Chapter
102. Normative Scope
103. Foundational Definitions
104. Architectural Provisions
105. Required Models and Artifacts
106. Cross-Chapter Dependencies
107. Canonical Decisions
108. Open Questions and Reserved Matters
109. Conformance and Review Criteria
110. Future Development Notes

Drafting Prompts

Prompt 1: Who may approve, modify, interpret, suspend, or retire architecture?

Prompt 2: How are conflicts and emergency exceptions handled?

Prompt 3: How are authority boundaries audited?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 12 - Management Systems Canon

Chapter Objective: Establish the authoritative registry of recognized domains, systems, layers, doctrines, protocols, artifacts, and relationships.

Required Outcomes

- **Registry purpose:** Source of truth for canonical identity, status, version, ownership, dependencies, and supersession.
- **Required statuses:** Provisional, canonical, deprecated, superseded, retired, reserved.
- **Reserved initial content:** Seed registry of all approved foundational and specialized elements from v1.x.

Required Section Structure

111. Purpose of the Chapter
112. Normative Scope
113. Foundational Definitions
114. Architectural Provisions
115. Required Models and Artifacts
116. Cross-Chapter Dependencies
117. Canonical Decisions
118. Open Questions and Reserved Matters
119. Conformance and Review Criteria
120. Future Development Notes

Drafting Prompts

Prompt 1: What qualifies for canon entry?

Prompt 2: How are aliases and superseded terms retained?

Prompt 3: What fields are mandatory for every registry entry?

Canonical Development Workspace

RESERVED FOR CANONICAL DEVELOPMENT

Contributing Reviewers	Reserved	Dependencies	See dependency map
Glossary Terms	Reserved	Canon Entries	Reserved

Chapter 13 - Architecture Style Guide

Chapter Objective: Define how all future EAMA documents must be written, named, structured, illustrated, and reviewed.

Required Outcomes

- **Required rules:** Naming conventions, capitalization, abbreviations, tone, heading hierarchy, normative language, examples, diagrams, tables, references, disclaimers.
- **Voice:** Straight-faced, technically rigorous, internally consistent, accessible to technically literate generalists.
- **Reserved templates:** Domain chapter, system specification, addendum, change log, doctrine, protocol, interface contract.

Required Section Structure

121. Purpose of the Chapter
122. Normative Scope
123. Foundational Definitions
124. Architectural Provisions
125. Required Models and Artifacts
126. Cross-Chapter Dependencies
127. Canonical Decisions
128. Open Questions and Reserved Matters
129. Conformance and Review Criteria
130. Future Development Notes

Drafting Prompts

Prompt 1: How should advanced fictional content remain rigorous and unambiguous?

Prompt 2: What language is prohibited or discouraged?

Prompt 3: Which document templates are mandatory?

Canonical Development Workspace

Chapter 14 - Versioning & Change Management

Chapter Objective: Define controlled evolution of documents, terms, architecture, and canon.

Required Outcomes

- **Required controls:** Version scheme, draft status, approval gates, change requests, impact assessment, migration, deprecation, supersession, rollback.
- **Canonical stability:** Approved terms remain authoritative until formally amended.
- **Reserved process:** ONESTAMP and electronic-signature integration into release workflow.

Required Section Structure

131. Purpose of the Chapter
132. Normative Scope
133. Foundational Definitions
134. Architectural Provisions
135. Required Models and Artifacts
136. Cross-Chapter Dependencies
137. Canonical Decisions
138. Open Questions and Reserved Matters
139. Conformance and Review Criteria
140. Future Development Notes

Drafting Prompts

Prompt 1: What constitutes a major, minor, patch, addendum, or emergency revision?

Prompt 2: How are impacts propagated across volumes?

Prompt 3: What approval evidence must be retained?

Chapter 15 - Future Expansion Strategy

Chapter Objective: Define how new volumes, domains, technologies, doctrines, and architectural concerns enter EAMA.

Required Outcomes

- **Required pathway:** Proposal, classification, duplication check, architectural fit review, glossary registration, pilot drafting, review, approval, canon entry.
- **Reserved future concerns:** Ontological architecture, state-space governance, absolute authority protocols, operational intelligence, interface systems, specialized deception volumes.
- **Boundary rule:** Volume I may recognize future concerns without prematurely defining their detailed implementation.

Required Section Structure

141. Purpose of the Chapter
142. Normative Scope
143. Foundational Definitions
144. Architectural Provisions
145. Required Models and Artifacts
146. Cross-Chapter Dependencies
147. Canonical Decisions
148. Open Questions and Reserved Matters
149. Conformance and Review Criteria
150. Future Development Notes

Drafting Prompts

Prompt 1: How does EAMA grow without fragmentation?

Prompt 2: What future volumes are anticipated?

Prompt 3: How are speculative concepts introduced without destabilizing foundations?

Universal Management Domain Template

This template is a normative development instrument referenced by Chapter 8. Every domain and major management system must address each field or record a formally approved exception.

1. Purpose

Why the domain exists and the enterprise condition it addresses.

DOMAIN-SPECIFIC CONTENT RESERVED

2. Mission

The enduring operational mandate of the domain.

DOMAIN-SPECIFIC CONTENT RESERVED

3. Scope

Included responsibilities, exclusions, and boundary conditions.

DOMAIN-SPECIFIC CONTENT RESERVED

4. Core Responsibilities

Primary duties that define successful operation.

DOMAIN-SPECIFIC CONTENT RESERVED

5. Managed Assets

Information, processes, identities, resources, models, events, or artifacts governed.

DOMAIN-SPECIFIC CONTENT RESERVED

6. Inputs

Information, triggers, authority, resources, and context received.

DOMAIN-SPECIFIC CONTENT RESERVED

7. Outputs

Decisions, artifacts, services, state changes, and signals produced.

DOMAIN-SPECIFIC CONTENT RESERVED

8. Internal Services

Capabilities provided within the domain.

DOMAIN-SPECIFIC CONTENT RESERVED

9. External Interfaces

Formal connections to other systems and external actors.

DOMAIN-SPECIFIC CONTENT RESERVED

10. Dependencies

Systems, services, doctrines, and resources required.

DOMAIN-SPECIFIC CONTENT RESERVED

11. Governance

Decision rights, ownership, policy, oversight, and exception handling.

DOMAIN-SPECIFIC CONTENT RESERVED

12. Doctrine

Binding operational concepts and rules.

DOMAIN-SPECIFIC CONTENT RESERVED

13. Trust Model

Assumptions concerning identity, information, actors, and evidence.

DOMAIN-SPECIFIC CONTENT RESERVED

14. Security Model

Protection objectives, boundaries, controls, and threat assumptions.

DOMAIN-SPECIFIC CONTENT RESERVED

15. Lifecycle

Creation, activation, operation, maintenance, evolution, suspension, and retirement.

DOMAIN-SPECIFIC CONTENT RESERVED

16. Operational States

Recognized modes such as normal, degraded, isolated, emergency, recovery, and retired.

DOMAIN-SPECIFIC CONTENT RESERVED

17. Integration Points

Specific exchange points with other domains and layers.

DOMAIN-SPECIFIC CONTENT RESERVED

18. Canonical Relationships

Registered dependencies, support relationships, governance links, and inheritance.

DOMAIN-SPECIFIC CONTENT RESERVED

19. Future Expansion

Reserved growth pathways and anticipated capabilities.

DOMAIN-SPECIFIC CONTENT RESERVED

20. Authority Boundaries

What may be authorized, denied, delegated, overridden, or escalated.

DOMAIN-SPECIFIC CONTENT RESERVED

21. Failure and Degradation Modes

Expected behavior under compromise, incompleteness, isolation, overload, or partial failure.

DOMAIN-SPECIFIC CONTENT RESERVED

22. Observability and Auditability

Required logs, traces, explanations, state visibility, and review evidence.

DOMAIN-SPECIFIC CONTENT RESERVED

23. Canonical Artifacts

Required registries, maps, models, specifications, records, and outputs.

DOMAIN-SPECIFIC CONTENT RESERVED

Provisional Glossary Controls

The glossary is a living controlled artifact developed alongside Volume I. It does not delay drafting, but no term becomes authoritative until registered and approved.

Glossary Entry Schema

Field	Requirement	Example Status
Canonical Term	Preferred official term	Required
Authoritative Definition	Single controlling definition	Required
Classification	Domain, system, layer, doctrine, protocol, artifact, etc.	Required
Related Terms	Broader, narrower, synonymous, dependent, or contrasting terms	Required when applicable
Applicable Chapters	Where the term is defined or used normatively	Required
Version Introduced	First version containing the term	Required
Status	Provisional, canonical, superseded, retired, reserved	Required
Owner / Steward	Responsible authority for maintenance	Required
Superseded Terminology	Aliases or retired names	Conditional
Notes / Examples	Non-normative clarification	Optional

Seed Glossary Register

Term	Provisional Definition	Classification	Status	Source / Chapter
Architecture	The structured organization of components, relationships, rules, viewpoints, and decisions defining a system of systems.	Foundational term	Provisional	Chapter 6
Management System	A governed architectural unit that manages a defined class of enterprise assets, responsibilities, decisions, and interactions.	Foundational term	Provisional	Chapter 8
Domain	A bounded area of enterprise concern containing related management systems, services, artifacts, and doctrines.	Classification term	Provisional	Chapter 8
Interoperability	The ability of distinct systems to exchange and correctly use information, services, authority, context, and operational state.	Architectural property	Provisional	Chapter 9
Canonical	Formally approved and authoritative within the EAMA reference model until amended, superseded, or retired.	Governance term	Provisional	Chapters 11-14
Integration Layer	A cross-domain architectural fabric coordinating exchanges and behavior without replacing the participating systems.	Architectural component	Provisional	Chapters 6, 9
Operational State	A formally recognized	Lifecycle term	Provisional	Chapters 7-9

	condition governing expected system behavior and available capabilities.			
Artifact	A controlled representation, record, model, specification, registry, diagram, or output produced or governed by the architecture.	Documentation term	Provisional	Chapters 6, 13

Glossary Governance Rules

- Definitions must be concise enough to govern usage and broad enough to remain stable across volumes.
- A term may not be assigned multiple incompatible meanings without explicit qualification.
- Aliases remain searchable but must point to one preferred canonical term.
- Superseded definitions remain in historical records with effective-version boundaries.
- Examples are non-normative unless explicitly designated as normative.

Reserved Sections for Future Canonical Development

The following reservations acknowledge likely future architectural work without prematurely defining it as Volume I canon.

Ontological Architecture and State-Space Governance

Future treatment of baseline, simulated, deceptive, holographic, counterfactual, and other recognized state spaces.

RESERVED FOR CANONICAL DEVELOPMENT

Absolute Authority and Execution Protocols

Future treatment of non-overridable, immutable, delegated, emergency, and exception-based authority structures.

RESERVED FOR CANONICAL DEVELOPMENT

Operational Intelligence Architecture

Future domain governing enterprise sensing, interpretation, prediction, operational truth, and coordinated response.

RESERVED FOR CANONICAL DEVELOPMENT

Interface Systems Architecture

Future domain governing human-system, system-system, perceptual, holographic, gaze-coupled, and adaptive interfaces.

RESERVED FOR CANONICAL DEVELOPMENT

Information Warfare and Deception Volume

Specialized volume containing approved deception architecture, validation/provenance separation, integration layers, and related surfaces.

RESERVED FOR CANONICAL DEVELOPMENT

Labor Holography Systems

Specialized deceptive labor architecture recognized as an early example of a cross-domain surface.

RESERVED FOR CANONICAL DEVELOPMENT

Gaze-Coupled Authenticity Interfaces

Specialized interface concept recognized as an early example of perception-sensitive interaction architecture.

RESERVED FOR CANONICAL DEVELOPMENT

Master Visual Architecture Set

Layer diagrams, domain maps, relationship graphs, lifecycle models, governance maps, and volume-navigation diagrams.

RESERVED FOR CANONICAL DEVELOPMENT

Machine-Readable Canon Registry

Structured representation of terms, relationships, statuses, dependencies, versions, and artifacts.

RESERVED FOR CANONICAL DEVELOPMENT

Conformance Assessment Framework

Future scoring, review, and certification method for domain and document compliance with EAMA.

RESERVED FOR CANONICAL DEVELOPMENT

Development Registers

Open Questions Register

ID	Question	Affected Chapter	Owner	Resolution Status
Reserved	Reserved	Reserved	Reserved	Reserved

Canonical Decisions Register

Reserved	Reserved	Reserved	Reserved	Reserved

Cross-Chapter Dependency Register

Source Chapter	Target Chapter	Dependency	Impact	Status
Reserved	Reserved	Reserved	Reserved	Reserved

Reserved Artifact Register

Artifact	Purpose	Owning Chapter	Required Format	Status
Reserved	Reserved	Reserved	Reserved	Reserved

Skeleton Completion Checklist

- ☐ Approved title and subtitle preserved
- ☐ Document-control fields completed
- ☐ All fifteen chapters drafted
- ☐ Universal domain template approved
- ☐ Glossary seed terms reviewed and expanded
- ☐ Management Systems Canon seed registry populated
- ☐ Interoperability and relationship models completed
- ☐ Governance roles and approval rules finalized
- ☐ Style guide and versioning controls approved
- ☐ Reserved future-canon items classified
- ☐ Internal references and TOC updated
- ☐ Final disclaimer reviewed
- ☐ Release candidate rendered and visually inspected
- ☐ Author review completed
- ☐ Electronic signature applied
- ☐ ONESTAMP applied

End of Controlled Skeleton

This document becomes an approved development baseline only after review, electronic signature, and ONESTAMP by the approving authority.
