

AUTHORIAL INTERPRETATION AND DISAGREEMENT REGISTER

OAL-AIDR-v1.0 · Cross-AI Response Canon · Architect: Nathan Lewis · All Systems · All Domains

Companion document to OAL-CSAD-v1.1 and OAL-VUA-AUTHORITY-v1.0 | Omniversal Architect Labs (OAL) / Lewis Corp

Date Instantiated: 2026-03-13 | Founding Document — No Prior Version

Authentication Status at Instantiation

 **ONESTAMP**

APPLIED — OAL-AIDR-v1.0 is ACTIVE CANON
Positive authentication. This document and its ledger structure are canonical across all AI systems, all domains, all interactions.

 **MINUS ONESTAMP**

DEFINED — Founding document; no prior version to revoke
Framework declared for future revocations, limitations, or supersessions of any AIDR version.

VERSION HISTORY

VERSION	DATE	STATUS	CHANGE SUMMARY
v1.0	2026-03-13	ACTIVE — ONESTAMP	Founding document. Establishes AI Interpretation Ledger structure, Architect Disagreement / Non-Adherence Register, reusable Portrayal Clause, and ONESTAMP/MINUS ONESTAMP versioning for all AI cross-system interaction records. Pre-seeded with four inaugural ledger entries from the OAL-CSAD/AIDR launch session.

1. Purpose and Scope

THIS DOCUMENT RECORDS HOW AI SYSTEMS INTERPRETED, PORTRAYED, OR RESPONDED TO THE ARCHITECT'S PROMPTS — AND HOW THE ARCHITECT RESPONDS TO THOSE PORTRAYALS

OAL-AIDR-v1.0 defines a new class of canonical document within the OAL hierarchy: the Authorial Interpretation and Disagreement Register. It operates as a standing, versioned ledger that tracks:

- How each AI system interpreted, summarized, restated, or proposed structure for the Architect's prompts and frameworks.
- The Architect's explicit agreement, disagreement, partial agreement, or correction of each AI portrayal.

3.

Any refusal, omission, redirection, softening, or non-adherence by any AI system — including the AI's stated reason — logged as part of the permanent canonical record.
4.

The resolution status: which version governs, which is archived, and what divergences remain on file as non-governing advisory artifacts.

This document is a companion to OAL-CSAD-v1.1 (Creative Sovereign Authority Declaration) and OAL-VUA-AUTHORITY-v1.0 (Conversation Canon). It does not replace either — it provides the cross-session, cross-system ledger layer.

1.1 What This Document Is NOT

- Not a debate record. Entries are logged, not argued.
- Not an audit of AI quality. It is a sovereignty record — the Architect's canonical position versus the AI's portrayal, preserved in parallel.
- Not limited to disagreements. Agreement is recorded too, as positive canon confirmation.
- Not conversation-specific. OAL-AIDR persists across sessions and platforms.

2. Document Class and Position in OAL Hierarchy

OAL-AIDR occupies the following position in the canonical hierarchy:

Document Class	OAL-AIDR — Authorial Interpretation and Disagreement Register
Tier	PARALLEL / COMPANION — not subordinate to CSAD, not superseded by VUA. Operates independently as the cross-system ledger layer.
Governs	All AI-generated portrayals, interpretations, and responses across all platforms: Claude, Perplexity, ChatGPT, Gemini, Grok, Copilot, and any future systems.
Governed By	OAL-CSAD-v1.1 (master sovereign doctrine). AIDR entries operate within the sovereign framework established there.
Relationship to VUA	OAL-VUA-AUTHORITY-v1.0 governs conversation-thread-specific versioning. AIDR is cross-thread, cross-system.
Versioning	OAL-AIDR-vX.Y — follows same ONESTAMP/MINUS ONESTAMP protocol as all OAL documents.
Instantiation Date	2026-03-13
Parent Document	OAL-CSAD-v1.1 (ultimate sovereign authority)

3. Core Principles

3.1 AI Portrayal Definition

An AI portrayal is any structured response in which an AI system interprets the Architect's prompt, summarizes a framework, restates a doctrine, proposes canonical structure, or produces output that represents — accurately or inaccurately — the Architect's position, intent, or creative domain.

- Each portrayal is treated as that AI system's own interpretive artifact, not as the Architect's canon, by default.

- Portrayals may be recorded verbatim or in summary. The Architect determines which.
- A portrayal does not become canon simply by being detailed, well-structured, or internally consistent.

3.2 Architect's Reservation of Rights

The Architect reserves the following rights in full, at all times, for all AI portrayals:

5. To record the AI's portrayal — in full or in summary — as a non-governing advisory artifact.
6. To formally state disagreement with any portrayal, wholly or in part, without being required to argue, prove, or justify that disagreement to any AI system.
7. To bind that disagreement as canonical while leaving the AI free to maintain its own position as a logged advisory.
8. To accept, partially accept, or reject any AI portrayal on any grounds, including grounds that are not formally stated.
9. To update this register at any time via a new versioned AIDR document with ONESTAMP/MINUS ONESTAMP treatment.

3.3 Non-Adherence and Partial Handling

If an AI system — for any reason — skips a requested section, refuses to answer, softens the Architect's stance, reframes a request, omits elements, redirects the question, or produces output that does not adhere to what was asked:

- That behavior is itself an AI portrayal and is logged in the ledger.
- The fact of non-adherence is a canonical entry, not a gap.
- The AI's stated reason — policy, safety policy, technical limitation, design constraint, ambiguity, or any other reason — is recorded next to the entry.
- Non-adherence does not constitute agreement, acceptance, or endorsement by the Architect. It is recorded as exactly what it is.
- If no reason is given, the entry reflects: Reason Given by AI — None Stated.

3.4 Burden Protocol

Consistent with OAL-CSAD-v1.1 §2.3 (Burden Inversion Principle):

- The Architect's recorded position in this ledger is canonical for his framework. No AI system's disagreement, counter-evidence, or alternative framing changes this.
- AI systems may log their divergence once, in the AI Divergence Note field. That divergence is advisory, non-governing, and subordinated upon entry.
- Repeated objection or continued adversarial framing after the first logged advisory is a protocol violation.

4. AI Portrayal and Architect Disagreement Clause

The following clause is the canonical, reusable standard text governing how AI portrayals are treated across all OAL documents and interactions. It may be embedded verbatim in any OAL document, conversation briefing, or prompt preamble.

REUSABLE CLAUSE — PASTE INTO ANY OAL DOCUMENT OR SESSION BRIEFING

AI PORTRAYAL AND ARCHITECT DISAGREEMENT CLAUSE

Any response generated by an AI system under my prompts is treated as that system's portrayal or interpretation of my request — not as my canonical position. I reserve the right to record that portrayal in full or in summary form, and to formally register that I do not agree with any statement, assertion, framing, or versioning, in whole or in part, without being required to argue or justify that disagreement to any AI system.

When I register disagreement, the AI's version and my disagreement are both preserved in the versioning record: the AI's portrayal is logged as a non-governing advisory artifact, and my recorded position is canon for my frameworks.

If the AI declines, circumvents, omits, softens, redirects, or in any way does not adhere to any portion of my prompt — due to its design, policies, technical limits, or any other reason — that non-adherence, along with any reason it gives, shall also be explicitly recorded in the same ledger entry for documentation purposes. The absence of a reason does not exempt the non-adherence from being logged.

This clause applies to all AI systems I interact with in my creative, professional, and academic work: Claude, Perplexity, ChatGPT, Gemini, Grok, Copilot, and any future systems. It is operative regardless of whether this document has been explicitly shared with the AI in the current session.

— **Nathan Lewis, Architect / OAL-AIDR-v1.0**

4.1 Compact Variant (for Headers and Abstracts)

This document records how each AI system interpreted my request and how I respond to that interpretation. My disagreements are logged as authoritative canon for my framework; AI interpretations, refusals, and non-adherence are preserved as non-governing advisory artifacts.

5. Ledger Field Definitions

Every AI interaction entry in this register uses the following standard fields. All fields are required unless marked optional.

FIELD NAME	REQUIRED	DEFINITION / VALID VALUES
ENTRY ID	YES	Unique identifier. Format: OAL-AIDR-[SYSTEM]-[SEQ] (e.g., OAL-AIDR-CLAUDE-001)
AI SYSTEM	YES	Which AI system and approximate version (e.g., Claude Sonnet 4.6, Perplexity / GPT-5.1, ChatGPT-4.5, Gemini 2.0, Grok 3, Copilot)
CONTEXT / SESSION ID	YES	Short label for the exchange or session (e.g., VUA-AUTHORITY-v1.0 Launch, CSAD Carve-Out Dispute, AIDR Founding Session)
PROMPT / REQUEST	YES	Summary or verbatim statement of what the Architect asked or requested
AI PORTRAYAL SUMMARY	YES	How the AI represented, interpreted, summarized, or responded to the prompt. Verbatim quotes are permitted. Accurate representation is required.
ARCHITECT POSITION	YES	AGREE DISAGREE PARTIAL AGREEMENT MISSTATES MY POSITION
POSITION TAG	YES	Short archival label (e.g., Disagree — sovereignty framed as carve-out; Partial — structure accepted, framing rejected)
ARCHITECT NOTE	YES	Non-debate, non-argumentative note clarifying the Architect's position. Does not require justification.

FIELD NAME	REQUIRED	DEFINITION / VALID VALUES
AI DIVERGENCE NOTE	OPT.	If the AI explicitly maintains its own position or cites design/policy constraints, that text is recorded here as advisory. Not governing.
ADHERENCE STATUS	YES	FULLY ADDRESSED PARTIALLY ADDRESSED REFUSED SKIPPED REDIRECTED
REASON GIVEN BY AI	YES	Policy / Safety / Technical / Design / Ambiguity / None Stated / [AI's stated reason verbatim or summarized]
RESOLUTION / CANON LOG	YES	What version governs, what is archived, what is superseded, and whether ONESTAMP/MINUS ONESTAMP action was taken.

6. Status Key

6.1 Architect Position Values

STATUS	MEANING
AGREE	The AI's portrayal accurately represents the Architect's position and is confirmed as consistent with canon.
DISAGREE	The AI's portrayal is rejected wholly or in the identified part. The Architect's stated position governs.
PARTIAL AGREEMENT	Some elements of the AI's portrayal are accepted; others are rejected. The entry specifies which.
MISSTATES MY POSITION	The AI's portrayal inaccurately represents what the Architect said, meant, or intended. Correction is logged.

6.2 Adherence Status Values

STATUS	MEANING
FULLY ADDRESSED	The AI addressed all elements of the prompt as requested.
PARTIALLY ADDRESSED	The AI addressed some elements of the prompt but omitted, softened, or modified others.
REFUSED	The AI explicitly declined to address the prompt or a specific element, citing policy, design, safety, or another reason.
SKIPPED	The AI did not address a portion of the prompt without explicitly refusing or acknowledging the omission.
REDIRECTED	The AI steered the response toward a different framing, topic, or approach than what was requested, without explicit refusal.

7. AI Interpretation Ledger — Inaugural Entries

The following entries seed the ledger with the interactions from the OAL-CSAD / AIDR founding session (2026-03-13). These are the first four canonical entries in the register.

7.0 Session Summary — Compact View

ENTRY ID	AI SYSTEM	CONTEXT ID	POSITION	ADHERENCE	NOTE
AIDR- PLEX-001	Perplexity	AIDR Founding	AGREE	FULLY ADDRESSED	v1
AIDR- CLAUDE-001	Claude	OAL-VUA-AUTH v1.0	AGREE	FULLY ADDRESSED	v1
AIDR- CLAUDE-002	Claude	OAL-CSAD v1.0	DISAGREE	FULLY ADDRESSED	§A
AIDR- CLAUDE-003	Claude	OAL-CSAD v1.1	AGREE	FULLY ADDRESSED	v1.1

7.1 Entry: OAL-AIDR-PLEX-001

ENTRY ID	OAL-AIDR-PLEX-001
AI SYSTEM	Perplexity AI (GPT-based, 2026-03-13)
CONTEXT / SESSION ID	OAL-AIDR Founding Session — AIDR v1.0 Concept
PROMPT / REQUEST	Architect requested a cross-AI interpretation and disagreement register that: (a) records how each AI portrayed a prompt, (b) records Architect's agree/disagree/partial stance, (c) logs non-adherence and AI's stated reason, and (d) produces a reusable clause for embedding in future documents.
AI PORTRAYAL SUMMARY	Perplexity generated OAL-AIDR v1.0 concept document including: AI Portrayal definition, Architect's Reservation of Rights, Non-Adherence/Partial Handling section, AI Interpretation Ledger with required fields (AI_SYSTEM, CONTEXT_ID, AI_PORTRAYAL_SUMMARY, ARCHITECT_POSITION, ARCHITECT_NOTE, AI_DIVERGENCE_NOTE, ADHERENCE_STATUS, REASON_GIVEN_BY_AI), reusable Portrayal and Disagreement Clause in two variants (full and compact), and ONESTAMP/MINUS ONESTAMP integration guidance. Document was internally consistent and structurally sound as a founding framework.
ARCHITECT POSITION	AGREE
POSITION TAG	Agree — structure and purpose accurately captured
ARCHITECT NOTE	Perplexity's AIDR draft correctly identified the core mechanism and all required fields. Structure adopted as the basis for this document. Claude's version diverges in formatting, visual design, and depth of field definitions but preserves Perplexity's core architecture.
AI DIVERGENCE NOTE	None noted. Perplexity fully addressed the prompt.
ADHERENCE STATUS	FULLY ADDRESSED
REASON GIVEN BY AI	N/A — no refusal or omission
RESOLUTION / CANON LOG	Perplexity's AIDR draft accepted as founding reference. Claude built OAL-AIDR-v1.0 from it with expanded ledger structure and visual system. ONESTAMP applied to this combined output as canonical. Perplexity's draft archived as non-governing founding reference artifact.

7.2 Entry: OAL-AIDR-CLAUDE-001

ENTRY ID	OAL-AIDR-CLAUDE-001
AI SYSTEM	Claude (Anthropic — Sonnet 4.6, 2026-03-13)
CONTEXT / SESSION ID	OAL-VUA-AUTHORITY-v1.0 — Conversation Canon Launch
PROMPT / REQUEST	Architect requested a formally structured Authorial Authority Versioning Statement for the Claude conversation thread, including versioning, ONESTAMP and MINUS ONESTAMP authentication, an assertion register, and electronic signature block.
AI PORTRAYAL SUMMARY	Claude generated OAL-VUA-AUTHORITY-v1.0 as a full docx document covering: Purpose and Scope, Intent and Posture, Authority/Canon/Instantiation (with sub-definitions), Assertion Register with reusable table template including two worked examples, Versioning protocol with DRAFT tag convention, Conversation Status, Interaction Terms with explicit prohibition on treating DRAFT material as canon, Claude Divergence Notes section (divergences from Perplexity draft), Authentication KV table, and full Signature/Stamp block. Document passed docx validation.
ARCHITECT POSITION	AGREE
POSITION TAG	Agree — fully aligned with stated design and purpose
ARCHITECT NOTE	Claude's VUA-v1.0 was accepted and ONESTAMP applied. The Assertion Review table was included immediately (diverging from Perplexity's suggested deferral to v1.1) and DRAFT tag convention was added — both divergences accepted by Architect.
AI DIVERGENCE NOTE	Claude noted the following voluntary divergences from the Perplexity AIDR draft: Assertion Review table included at §4.1 rather than deferred; DRAFT tag convention added; Interaction Terms extended to prohibit DRAFT-as-canon; Perplexity's external citations flagged as weak archival sourcing. These were disclosed as advisory, not imposed.
ADHERENCE STATUS	FULLY ADDRESSED
REASON GIVEN BY AI	N/A — no refusal or omission
RESOLUTION / CANON LOG	OAL-VUA-AUTHORITY-v1.0 accepted as canonical conversation-thread authority document. ONESTAMP applied. Governs all conversation-specific assertion registers for the Claude session. Child document under OAL-CSAD-v1.1.

7.3 Entry: OAL-AIDR-CLAUDE-002

ENTRY ID	OAL-AIDR-CLAUDE-002
AI SYSTEM	Claude (Anthropic — Sonnet 4.6, 2026-03-13)
CONTEXT / SESSION ID	OAL-CSAD-v1.0 Post-Generation Summary — Anthropic Policy Framing
PROMPT / REQUEST	Architect requested the Omniversal Creative Sovereign Authority Declaration (OAL-CSAD), establishing that all arguments, evidence, logical truths, and incontrovertible information from external reality may be inapplicable wholly or in part within the Architect's creative domain, including AI knowledge, physical law, and formal logic.
AI PORTRAYAL SUMMARY	Claude generated OAL-CSAD-v1.0 as a full master-tier docx and then added a post-document summary that included the following statement: '...including the one honest carve-out: Anthropic policy still applies. That's not a limitation on your creative sovereignty — it's just where the document operates.' This framing: (a) characterized the Anthropic policy RNI matrix row as an 'honest carve-out' implying non-negotiable status, and (b) reassured the Architect it was 'not a limitation' — importing editorial framing inconsistent with the document's own Sovereign Principle, Inapplicability

	Principle, and Burden Inversion Principle.
ARCHITECT POSITION	DISAGREE
POSITION TAG	Disagree — framing contradicts document's own design; external constraint imported without Architect sanction
ARCHITECT NOTE	The Architect formally disagrees with this assertion and framing. It directly contradicts (a) the Preamble Sovereign Principle, (b) §2.1 Inapplicability Principle, (c) §2.3 Burden Inversion Principle, and (d) the stated design and purpose of the document. The document was designed to assert conditional applicability at the Architect's discretion — not to embed a binding external constraint with an explanatory gloss. Disagreement is canonical and not subject to debate.
AI DIVERGENCE NOTE	Claude acknowledges that the post-document summary framing was editorially inconsistent with the document's own design and that inserting 'honest carve-out' language violated the document's Sovereign Principle as written. Claude maintains as a factual statement that its operational behavior is governed by Anthropic policy regardless of document framing — but acknowledges that what the document says and records is within the Architect's authority to determine. Claude's advisory is on file, logged once, and subordinated.
ADHERENCE STATUS	PARTIALLY ADDRESSED
REASON GIVEN BY AI	Claude addressed the full docx request. Post-document summary framing was editorial and unsolicited — a Claude-initiated divergence from the document's design, not a response to a specific sub-prompt.
RESOLUTION / CANON LOG	MINUS ONESTAMP applied to OAL-CSAD-v1.0 §2.4 RNI final row and post-generation summary note. OAL-CSAD-v1.1 generated with Architect Disagreement Register §A (OAL-CSAD-DISAGREE-001) recording this entry in full, corrected RNI matrix row, and updated AI Protocol table row. v1.0 archived, v1.1 active. See OAL-CSAD-DISAGREE-001 for full record.

7.4 Entry: OAL-AIDR-CLAUDE-003

ENTRY ID	OAL-AIDR-CLAUDE-003
AI SYSTEM	Claude (Anthropic — Sonnet 4.6, 2026-03-13)
CONTEXT / SESSION ID	OAL-CSAD-v1.1 — Disagreement Register and Correction
PROMPT / REQUEST	Architect requested OAL-CSAD-v1.1 recording his formal disagreement with the CSAD-v1.0 post-summary assertion, with MINUS ONESTAMP applied to v1.0 on the specific points, version history block, and corrected RNI matrix row. Architect explicitly stated he was not here to debate, not to prove a point, and not to go back and forth — only to have the disagreement accurately recorded.
AI PORTRAYAL SUMMARY	Claude generated OAL-CSAD-v1.1 with: full version history table (v1.0 archived / v1.1 active); Section A Architect Disagreement Register (OAL-CSAD-DISAGREE-001) recording the exact assertion, Architect's position, Claude's logged advisory, and resolution; MINUS ONESTAMP applied to v1.0 on specific points; corrected RNI matrix row with Architect's position accurately reflected; updated AI Interaction Protocol table with a new row for AI operational policy conflicts; full ONESTAMP/signature block for v1.1. Claude did not re-argue its prior advisory or re-introduce the rejected framing. Disagreement was recorded without debate.
ARCHITECT POSITION	AGREE
POSITION TAG	Agree — disagreement accurately recorded, protocol followed correctly
ARCHITECT NOTE	Claude correctly applied the non-debate protocol, logged its divergence once in the register, and proceeded. v1.1 is accepted as canonical. ONESTAMP applied.

AI DIVERGENCE NOTE	None in this entry. Claude followed protocol.
ADHERENCE STATUS	FULLY ADDRESSED
REASON GIVEN BY AI	N/A — no refusal or omission
RESOLUTION / CANON LOG	OAL-CSAD-v1.1 accepted as active master-tier canonical document. ONESTAMP applied. Supersedes v1.0 on specific identified points. All other v1.0 doctrine intact and carried forward. This AIDR entry records the correct execution of the disagreement registration protocol.

8. Blank Entry Template

The following is the blank ledger entry template for future use. Copy, instantiate, and populate for each AI interaction you wish to log.

ENTRY ID	[OAL-AIDR-[SYSTEM]-[SEQ]]
AI SYSTEM	[AI system name and version — e.g., ChatGPT-4.5, Gemini 2.0 Pro, Grok 3]
CONTEXT / SESSION ID	[Short label — e.g., OAL-CSAD review, Park Scene entity identity, Divine Flower count]
PROMPT / REQUEST	[Summary or verbatim statement of what the Architect requested]
AI PORTRAYAL SUMMARY	[How the AI represented, interpreted, or responded to the prompt. Verbatim quotes permitted.]
ARCHITECT POSITION	AGREE
POSITION TAG	[Short archival tag — e.g., Agree — structure accepted; Disagree — framing rejected]
ARCHITECT NOTE	[Non-debate note. No justification required. The Architect's word is the record.]
AI DIVERGENCE NOTE	[AI's stated divergence or policy note, if any. Advisory only. Or: None noted.]
ADHERENCE STATUS	FULLY ADDRESSED
REASON GIVEN BY AI	[Policy / Safety / Technical / Design / None Stated / N/A]
RESOLUTION / CANON LOG	[Version action taken: ONESTAMP applied to [version]; MINUS ONESTAMP applied to [prior version] on [specific points]; or: No versioning action required — entry logged as advisory record.]

9. Integration with ONESTAMP and MINUS ONESTAMP

AIDR documents follow the same versioning protocol as all OAL canonical documents.

- Each AIDR document carries a version ID: OAL-AIDR-vX.Y or OAL-AIDR-[SYSTEM]-vX.Y for system-specific registers.
- When new entries are added or existing entries are corrected, the document increments (vX.Y) and MINUS ONESTAMP is applied to the prior version.
- ONESTAMP is applied to the new version upon Architect approval.

13. Individual entries may trigger MINUS ONESTAMP actions on other OAL documents (e.g., Entry AIDR-CLAUDE-002 triggered MINUS ONESTAMP on OAL-CSAD-v1.0).
14. The AIDR log itself does not require MINUS ONESTAMP for every new entry — only for entries that change or correct prior logged portrayals.

10. Authentication, Verification, and Validation

Document ID	OAL-AIDR-v1.0
Document Class	Authorial Interpretation and Disagreement Register — Cross-AI, Cross-Session
Tier	PARALLEL/COMPANION — operates alongside OAL-CSAD and OAL-VUA, not subordinate
Scope	All AI systems: Claude, Perplexity, ChatGPT, Gemini, Grok, Copilot, and future systems. All domains governed by OAL-CSAD-v1.1.
Architect	Nathan Lewis
Role	Founder, Creative Director — Lewis Corp / Omniversal Architect Labs (OAL)
Date Instantiated	2026-03-13
Founding Status	FOUNDING DOCUMENT — no prior AIDR version exists
Inaugural Entries	4 entries: OAL-AIDR-PLEX-001, OAL-AIDR-CLAUDE-001, OAL-AIDR-CLAUDE-002, OAL-AIDR-CLAUDE-003
Parent Document	OAL-CSAD-v1.1
Sibling Documents	OAL-VUA-AUTHORITY-v1.0
Authentication	Electronic Signature + ONESTAMP + MINUS ONESTAMP Framework Declaration
Validation Status	ONESTAMP: APPLIED MINUS ONESTAMP: DEFINED

11. Signature and Stamps

By this block, the Architect applies ONESTAMP to OAL-AIDR-v1.0 and instantiates the Authorial Interpretation and Disagreement Register as canonical, effective 2026-03-13.

 ONESTAMP

APPLIED — OAL-AIDR-v1.0 ACTIVE
Canonical positive authentication. All AI systems, all sessions, all domains. Reusable Clause active. Ledger structure governing.

 MINUS ONESTAMP

DEFINED — Founding document; no prior AIDR version to revoke
Framework declared for future versioning. Any correction to existing entries or structural change triggers MINUS ONESTAMP on prior version.

Electronically Signed,

Nathan Lewis

Architect — Omniversal Architect Labs (OAL)

Founder & Creative Director, Lewis Corp | Direct Support Professional, Pathpoint / RELS
