

Development Items Research & Analysis — All Three Projects

Unified Research Report — RATIFIED & ONESTAMPED

Document ID: OAL-DOSSIER-DEV-001 **Version:** v2.0 **Status:** ♦ ONESTAMPED — ELECTRONICALLY SIGNED BY AUTHOR ♦ **Prepared by:** Perplexity Computer (AI Research, Synthesis & Documentation) **Revision History:** v1.0.0 (initial) → v1.1 (team review integration) → v2.0 (author decisions ratified) **Author:** Nathan Lewis — Architect of Record, ONE Industries / ONE Architect Labs **Electronic Signature Applied:** April 11, 2026 **Distribution:** ChatGPT · Google Gemini · Claude AI · Microsoft Copilot · Grok AI **Classification:** RATIFIED CANON DIRECTION — Active Development Authority Granted

♦ **ONESTAMP NOTICE** ♦ This document has received electronic approval and ONESTAMP from the author (Nathan Lewis, Architect of Record). All decisions recorded herein are ratified canon direction. Development on all three projects may proceed under the authority of these decisions. Elements not explicitly addressed by the author remain open for further review in a subsequent version.

COLLABORATIVE SCENE DRAFTING DIRECTIVE — AUTHOR INSTRUCTION (APPLIES TO ALL PROJECTS) The author has directed that for all scene drafting assignments (Q22 — Projects 1 and 2; AI Assignment — Project 3), each member of the collaborative AI team (ChatGPT, Google Gemini, Claude AI, Microsoft Copilot, Grok AI, and Perplexity Computer) is to independently draft their own version of each assigned scene or deliverable. All versions are to be shared with the full team for comparison. This approach is the author’s established workflow for maximizing narrative variety, comparative growth, and cross-AI development contribution. This directive supersedes any single-AI assignment recommendation from prior versions.

1. How to Use This Document

This is the ratified version of OAL-DOSSIER-DEV-001. All author decisions have been recorded, locked, and marked with ONESTAMP authority. Development teams (all six AI contributors) may now proceed on all three projects under these decisions.

Reading this document: - **Ratified items** are marked ♦ APPROVED and carry full canon authority - **Active items** are sections where the framework is locked but author decisions on specific sub-questions are pending a future version - **Open items** are tracked in Section 14 and carry no development authority until a subsequent ONESTAMP is applied - **Scene drafting assignments** are in Section 13 with the author's collaborative multi-AI directive

2. Author Decisions Record — Complete Ledger

This section provides a complete, consolidated record of every author decision made on April 11, 2026, for use as a canonical reference by all team members.

2.1 Project 1 — All Decisions (Section 3.7)

#	Question	Author Decision	Status
Q1	Years before theft?	3 years	♦ APPROVED
Q3	Audience composition?	Military acquisition officers + ONE Industries board + 1 ethics observer	♦ APPROVED
Q5	Control mechanism?	Pre-scripted AI with Nathan's manual override	♦ APPROVED
Q7	Third-shot severity for Beta?	Dramatically flung, clearly functional	♦ APPROVED
Q9	Demo classification?	Joint corp-gov classified	♦ APPROVED
Q10	Ocean meeting timeline & transit?	Post-theft. Transit: submersible.	♦ APPROVED
Q12	Colleague archetype?	Black-Ops / Military Liaison —	♦ APPROVED

#	Question	Author Decision	Status
		with defined motive, cost, leverage, risk reason, silence reason	
Q17	What changes hands?	Proof of government surveillance of ONE Industries	◆ APPROVED
Q18	Nathan's outcome?	Relational cost — loss of certainty about someone he trusted	◆ APPROVED
Q19	Reentry consequence?	A communication arrived during his absence that changes his next move	◆ APPROVED
Q20	Post-demo synthetic disposition?	One unit retained by government under contract — not objected to publicly	◆ APPROVED
Q21	Minor demo anomaly beat?	Yes — Beta's cycle initiates 0.4 seconds late; Nathan's expression doesn't change	◆ APPROVED
Q22	Scene drafting assignment?	All AI team members draft independently; all versions shared and compared	◆ APPROVED

2.2 Project 2 — All Decisions (Section 4.8)

#	Question	Author Decision	Status
Q1	Jurisdiction scope?	Full US critical infrastructure (civilian + government); military networks separate	◆ APPROVED

#	Question	Author Decision	Status
Q2	Simulated, live, or hybrid?	Live networks during active intrusion with Nathan's synthetic layer intercepting before real impact	◆ APPROVED
Q3	Operating authority?	Named joint task force, classified, black-program contractor designation	◆ APPROVED
Q4	Primary attack type?	AI-driven coordinated multi-vector — supply chain compromise + DDoS chain	◆ APPROVED
Q5	Detection timing?	Pre-exploit behavioral recognition	◆ APPROVED
Q10	3-second cycle?	Tunable — Nathan's signature and Chekhov's Gun	◆ APPROVED
Q11	Contain or retaliate?	Contain and observe only	◆ APPROVED
Q12	Innocent traffic?	Captured, flagged, immediately reviewed and released — real operational problem acknowledged	◆ APPROVED
Q14	What is transferred?	Mirror Core black-box: dangerous if misused, traceable, corruptible, future plot hook	◆ APPROVED
Q16	Future use?	Used successfully again; later turned against Nathan	◆ APPROVED
Q17	Canonical failure mode?	Recursive counter-simulation — planted as seed; discovered later	◆ APPROVED

#	Question	Author Decision	Status
Q19	Personal cost?	Delayed and compound; not visible in this exercise	◆ APPROVED
Q20	First Memory / Time Wars connection?	All seeded, none named explicitly	◆ APPROVED
Q21	Ethics beat delivery?	Nathan asks it himself — scene ends before internal answer is visible	◆ APPROVED
Q22	Scene drafting assignment?	All AI team members draft independently; all versions shared and compared	◆ APPROVED

2.3 Project 3 — All Decisions (Section 5.8)

#	Decision	Author Decision	Status
D1	Pathogen archetype	Novel zoonotic respiratory; 2–10 day incubation; negative standard panels; 15–20% severe; distinctive early skin manifestation	◆ APPROVED
D2	Primary objective	“Evaluate how frontline clinical teams detect, escalate, and make containment decisions during the first 72 hours of an uncharacterized pathogen outbreak, before any formal guidance or diagnostic confirmation exists.”	◆ APPROVED
D3	Target audience and scale	Single or dual hospital + county	◆ APPROVED

#	Decision	Author Decision	Status
D4	Sponsoring organization	public health; federal agencies as simulators only Named hospital coalition + named county public health authority; named improvement plan owner with budget authority required before exercise date is set	◆ APPROVED
D5	Evaluation baseline	Baseline-establishing exercise; standardized scoring rubric reusable for follow-on exercises	◆ APPROVED
Equity injects	Design timeline	Both equity injects fully designed concurrently with Phase 1 clinical vignettes	◆ APPROVED
“10-year” framing	Retire it	Retired. Replaced with heightened-risk-window framing.	◆ APPROVED
Inter-institution inject	Add to Phase 3	At least one inter-institution coordination inject in Phase 3	◆ APPROVED
AI assignment	Drafting	All AI team members draft independently; all versions shared and compared	◆ APPROVED

2.4 Backbone Architecture — Dependency Registry (Section 7.3)

#	Decision	Author Decision	Status
DEP-1	National-scale defensive	YES — approved as stated (postdates	◆ APPROVED

#	Decision	Author Decision	Status
DEP-2	architecture pre- or post-theft? Government retains synthetic from demo?	theft; ocean meeting is post-theft per Q10) YES — approved	◆ APPROVED
DEP-3	Mirror Core later turned against Nathan?	YES — approved	◆ APPROVED
DEP-4	Project 3 sponsoring authority overlaps with Nathan's Project 2 government relationship?	YES — approved	◆ APPROVED

3. Project 1 — Ratified Decisions & Active Development Authority

3.1 Canon Scene Parameters — Locked

The Kinetic Threshold Demonstration takes place 3 years before the theft. It is a joint corp-gov classified event attended by military acquisition officers, the ONE Industries board, and a single ethics observer. The demonstration uses pre-scripted synthetic humanoids under Nathan's manual override authority. Beta's cycle initiates 0.4 seconds late during the third shot — Nathan's expression does not change. The third shot results in Beta being dramatically flung but clearly functional, demonstrating the armor's energy management limits under real variance.

One synthetic unit is retained by the government under contractual rights following the demonstration. Nathan does not object publicly.

The Open Ocean Parley occurs post-theft, reached via submersible. Nathan's colleague is a Black-Ops / Military Liaison with a defined motive, cost, leverage point, a reason they risk the meeting, and a reason they do not simply report Nathan. What changes hands: proof of government surveillance of ONE Industries. Nathan's outcome: a relational cost — loss of certainty about someone he trusted. A communication arrives during his absence that changes his next move upon return.

3.2 Canon Chain — Project 1 into Project 2

With Q10 confirmed as post-theft and DEP-1 confirmed, the canonical sequence is:

1. **The Kinetic Threshold Demonstration** (3 years pre-theft) — Nathan at peak public-facing power
2. **The theft** — the event that restructures Nathan's relationship with institutions
3. **The Open Ocean Parley** (post-theft, exact interval TBD) — Nathan receives proof of surveillance via submersible; loses certainty about a trusted relationship

4. **The Network Defense Architecture** is built in the post-theft period, motivated by the surveillance knowledge and the relational fracture from the Parley — this is DEP-1 resolved

The government already holds one of Nathan's synthetics (DEP-2) when it becomes Nathan's joint-task-force partner in Project 2. This creates a layered dynamic: Nathan works with a government that both surveils him and holds property derived from his work.

3.3 Confirmation Bias Flags — Preserved for Development Reference

- **Flag 1 (Omnipotence):** The 0.4-second anomaly beat (Q21) is the designed response. Nathan handles it with invisible control. ♦ Ratified.
 - **Flag 2 (Colleague as delivery vehicle):** The colleague has their own agenda, cost, and leverage. The meeting has a cost to Nathan, not just a benefit. ♦ Ratified.
 - **Flag 3 (Pre-theft default):** Retired. Post-theft is now canon. ♦ Ratified.
 - **Flag 4 (Synthetic ethics as background):** The retained synthetic (Q20) is the mechanism by which this thread stays active without requiring the scene to resolve it.
-

4. Project 2 — Ratified Decisions & Active Development Authority

4.1 Canon Scene Parameters — Locked

The Network Defense Exercise operates on live US critical infrastructure (civilian + government; military networks excluded) during an active AI-driven multi-vector intrusion (supply chain compromise + DDoS chain). Nathan operates under a named joint task force designation with a black-program contractor classification. His system detects the intrusion pre-exploit through behavioral recognition.

The 3-second cycling interval is Nathan's tunable signature — set faster than any adversary has encountered, and a Chekhov's Gun. One attacker's behavioral data contains an unrecognized pattern: this is the recursive counter-simulation seed, planted here and discovered later.

The synthetic layer operates under contain-and-observe authority only. Innocent traffic that is captured is flagged, isolated, reviewed, and released. The Mirror Core is transferred to the partner agency as a black-box module: dangerous if misused, traceable by Nathan, corruptible, and a future plot hook. Nathan retains the attacker behavioral data and the architectural knowledge. The Mirror Core is later turned against Nathan (DEP-3).

The scene ends with Nathan asking himself: "Could you do this to a civilization?" The scene ends before the audience learns his internal answer.

All Time Wars and First Memory threads are seeded and not named.

The personal/political cost is delayed and compound — not visible in this exercise.

4.2 Canon Chain — Project 2 into Project 3

With DEP-4 confirmed, the sponsoring authority structure for Project 3's TTX is organizationally connected to the government relationship Nathan established in Project 2. The joint task force relationship that authorizes his cyber operation is the same institutional channel through which Project 3's public health exercise gains federal simulator support (CDC, HHS). Nathan designed the framework; he is not in the room.

4.3 Confirmation Bias Flags — Preserved for Development Reference

- **Flag 1 (Sole operator):** Resolved by Section 10. Nathan is architect and overseer. The system runs itself. ♦ Ratified.
 - **Flag 2 (Transfer as generous):** The ambiguity is intentional and preserved. The audience should not be certain whether the transfer is generous or strategic.
 - **Flag 3 (Ethics question external):** Ethics beat is internal to Nathan. ♦ Ratified (Q21).
 - **Flag 4 (Timeline contradiction):** Resolved by DEP-1. Network defense architecture postdates the theft.
-

5. Project 3 — Ratified Decisions & Active Development Authority

5.1 Canon Exercise Parameters — Locked

The Pathogen Outbreak Tabletop Exercise uses a novel zoonotic respiratory pathogen with variable 2–10 day incubation, negative standard panels, 15–20% severe outcomes, and a distinctive early skin manifestation that prevents COVID-reflex in participants.

Primary objective (verbatim, locked): “Evaluate how frontline clinical teams detect, escalate, and make containment decisions during the first 72 hours of an uncharacterized pathogen outbreak, before any formal guidance or diagnostic confirmation exists.”

Scale: Single or dual hospital + county public health as primary. Federal agencies (CDC, HHS) participate as simulators only.

Sponsoring authority: Named hospital coalition + named county public health authority. A named improvement plan owner with budget authority must be identified before the exercise date is set — this is a hard prerequisite, not a post-exercise task.

Evaluation baseline: This exercise establishes the baseline. A standardized scoring rubric is created and reused for follow-on exercises.

“10-year cycle” framing: Retired. The ratified replacement: *“We are in a heightened-risk window characterized by increasing zoonotic spillover pressure, degraded institutional memory post-COVID, and accelerating climate-driven pathogen expansion. The next major outbreak is not a question of if; it is a question of whether our systems have been rehearsed.”*

Equity injects (both fully designed concurrently with Phase 1 vignettes — not deferred): 1. Non-English-speaking patient cluster presenting simultaneously with suspected cases — tests communication, informed consent, and notification under uncertainty 2. Long-term care

facility transfer request with residents whose care needs cannot be safely disrupted by isolation requirements

Phase 3 includes at least one inter-institution coordination inject.

Ground rule (bolded, mandatory in facilitator guide): This exercise is testing the system, not evaluating individuals.

5.2 Canon Connection — Project 3 in the OAL Universe

The TTX exists within the OAL organizational universe. Its sponsoring authority overlaps with Nathan's Project 2 government relationship (DEP-4 confirmed). Nathan designed the exercise framework. He is not present during execution. His presence is the framework itself — this is the Architect Presence Model in its most institutional form.

5.3 Confirmation Bias Flags — Preserved for Development Reference

- **Flag 1 (Ownership is the most important question):** D4 is now a hard prerequisite with a named owner. ♦ Ratified.
 - **Flag 2 (Administration defensiveness):** The ground rule framing and facilitator training address this directly.
 - **Flag 3 (Single hospital underrepresents failure mode):** Inter-institution inject added to Phase 3. ♦ Ratified.
-

6. Backbone Architecture — Ratified Decisions

6.1 Dependency Registry — All Four Confirmed

DEP-1 — Confirmed: The national-scale defensive architecture postdates the theft. The Ocean Meeting (post-theft, submersible) is where Nathan receives proof of surveillance. The defensive architecture is built in the period between the Parley and the Network Defense exercise — motivated by the surveillance knowledge.

DEP-2 — Confirmed: The government retains one synthetic humanoid from the Kinetic Threshold Demonstration under contractual rights. Nathan's joint-task-force partner in Project 2 already holds this asset when the partnership forms. The dynamic: Nathan works with a government that surveils him, holds his technology, and depends on his architecture simultaneously.

DEP-3 — Confirmed: The Mirror Core is later turned against Nathan. The traceable and corruptible properties built into Q14 are the mechanism. The behavioral anomaly from the recursive counter-simulation seed (Q17) is likely the vector through which this occurs — the adversary who planted the anomaly eventually uses it to corrupt or redirect the Mirror Core.

DEP-4 — Confirmed: Project 3's sponsoring authority overlaps with Nathan's Project 2 government relationship. The federal simulator role (CDC, HHS) is accessed through the same institutional channel as the joint task force. Nathan does not need to be in the room for either — he built the access architecture.

6.2 Canon Timeline — Locked Sequence

Event	Canon Position
Kinetic Threshold Demonstration	T-minus 3 years (pre-theft)
The Theft	T=0
Open Ocean Parley (submersible)	Post-theft (exact interval: open, author to specify in scene)
Network Defense Architecture built	Post-Parley, pre-Exercise
Network Defense Exercise	Canon present for Project 2
Pathogen TTX Framework designed	Contemporaneous with or following Project 2
Mirror Core turned against Nathan	Future — Time Wars arc
Recursive counter-simulation discovered	Future — Time Wars arc

7. Cross-Project Dependency Architecture — Ratified

(Full section from v1.1 preserved; all decisions now confirmed)

The three projects are sequential with confirmed interdependencies:

Project 1 unlocks for Project 2: - Nathan's public-facing persona (weapons architect) makes his behind-the-scenes cyber operation believable - Government surveillance (Ocean Meeting payload) directly motivates the Mirror Core architecture - Synthetic control technology (Q5) establishes the underlying architecture Project 2's autonomous system relies on - DEP-2: the retained synthetic is already in government hands when Nathan's joint-task-force relationship forms

Project 2 unlocks for Project 3: - Mirror Core behavioral-data capture creates the institutional knowledge base Project 3's framework draws on - "Could you do this to a civilization?" is the thematic bridge to "testing the system, not evaluating individuals" - DEP-4: the joint task force relationship provides the institutional access path for Project 3's federal simulators

First Memory / Time Wars Threading — Confirmed Seeded: - Project 1: synthetic control mechanism is a proto-form of First Memory interface — planted, not named - Project 2: recursive counter-simulation is the first appearance of temporal deception dynamic — escalates to Time Wars - Project 3: "testing the system before failure arrives" is the civilizational-scale mirror of the Time Wars arc's central question

8. Omnicellular Architecture Reference Layer — Active

(Framework from v1.1 preserved; specific sub-decisions deferred to next ONESTAMP cycle)

Confirmed reference statement: Omnicellular Architecture v2 governs all adaptive survival and system-level processing behaviors referenced in this dossier.

Ontological Anchoring mechanism — proposed and active pending author ratification in next cycle. Eight-fold existential weight; area-of-effect negation must address all eight architectures simultaneously.

Bandwidth Throttling — proposed and active pending author ratification. Failure defined as resource redirection to single survival architecture, not physical destruction.

Open items deferred to next version: Full Omnicellular v2 specification; First Memory encoding mechanism; Nullarch's Superior agenda definition. See Section 14.

9. Failure Cascade & Recovery Logic — Ratified

(Full framework from v1.1 ratified for all three projects)

Project 1 — Confirmed Failure Architecture

- **Single failure:** Beta's cycle initiates 0.4 seconds late — suit holds, Beta functional, Nathan does not intervene. Anomaly documented and used in debrief as evidence of real-variance performance.
- **Compound failure:** Override fails AND cycle is late — Nathan's hand moves and stops. The audience member who notices is the colleague or an intelligence observer. This is the canonical surveillance thread plant.
- **Recovery:** Demonstration succeeds on mission under compound failure. Nathan learns from variance rather than hiding it.

Project 2 — Confirmed Failure Architecture

- **Single failure:** Intercept delay creates one real log entry — detected, retroactively flagged, attacker diverted before exploitation, no exfiltration.
- **Compound failure:** Intercept delay + civilian traffic spike + agency legal flag — Nathan invokes pre-negotiated emergency containment; all threads resolved; one behavioral anomaly remains unexplained.
- **The unrecognized anomaly is the recursive counter-simulation seed.**

Project 3 — Confirmed Failure Architecture

- **Single failure:** Participants identify pathogen archetype early — facilitator introduces false-negative rapid test complication to re-establish uncertainty.
 - **Compound failure:** Facilitator rescues + communication overwhelm + equity inject deferral — AAR must flag all three as findings, not artifacts. These are the most important findings the exercise can produce.
 - **Recovery principle:** Exercise failure is exercise success if findings are honestly recorded and D4's improvement plan owner has authority to act.
-

10. Architect Identity & Presence Model — Ratified

(Full framework from v1.1 ratified)

Confirmed framing: Nathan Lewis is an Architect of Systems. All three domains (weapons, cyber defense, institutional exercise) are expressions of a single question: how does a complex system behave under pressure it was not designed to handle?

Four-Mode Presence Model — Confirmed:

Mode	Description	Confirmed Examples
Architectural	Nathan designed it; it runs without him	Network defense during intrusion; armor on Beta; TTX framework
Oversight	Nathan observes; does not intervene	Most of the armor demonstration; network defense exercise as it runs
Intervention	Nathan acts because something is outside design parameters	Emergency containment protocol; the override option (not used)
Absence	Nathan is not present; system acts autonomously	Mirror Core post-transfer; synthetics between demonstrations; TTX during execution

Project-level presence — Confirmed: - Project 1: Architectural + Oversight during demo; override available, not used - Project 2: Oversight mode; intervention triggered by curiosity (unrecognized anomaly) not necessity - Project 3: Architectural only; Nathan is the framework, not a participant

11. Ethical Boundary Framework — Active

(Framework from v1.1 active; full author ratification deferred to next cycle — see Section 14)

Proposed Architect Ethical Doctrine — Active Pending Full Ratification:

What Nathan will not do (proposed): - Deploy any system against a population that cannot, even in principle, consent or know it is subject to the system - Use First Memory or its derivatives to alter memory without the subject's knowledge - Allow a system he designed to be used for unauthorized purposes without activating the Mirror Core's traceable properties - Remain silent when collateral harm is being systematically ignored by an institutional partner

What he is willing to risk (proposed): - His political standing when the alternative is a preventable harm - The operational security of a project when maintaining it requires the above prohibited acts - Being wrong — and documenting it publicly if necessary

What crosses the line (proposed): - Using the Mirror Core against a domestic civilian target without legal authority - Allowing the recursive counter-simulation adversary to operate unidentified for political convenience - Designing an exercise that produces only the findings the sponsoring institution wants to see

Author ratification of this framework is deferred to next ONESTAMP cycle. It is active for development guidance but not yet locked canon.

12. Information Asymmetry Index — Ratified

(Full index from v1.1 ratified; updated to reflect Q10 post-theft and DEP-1/DEP-2 confirmations)

Project 1

Party	Knows	Does Not Know
Nathan	Full armor capability; full synthetic control; that the government already holds one of his synthetics (post-theft context); that he is surveilled	Whether the colleague reports the meeting; the full scope of what the government knows
Military Acquisition Officers	They are watching a new APS prototype	Full three-shot mechanics; synthetic control method; the anomaly occurred
The Colleague	That Nathan is surveilled; that the meeting is monitored	Whether Nathan suspects; what Nathan will do with the intelligence
Government Observer	That the meeting is happening	What changes hands
The Audience (armor demo)	What they see	Nathan can override; Beta had an anomaly; the synthetics may be proto-sentient

Project 2

Party	Knows	Does Not Know
Nathan	Full system architecture; all attacker data; Mirror Core is traceable and corruptible	The identity behind the unrecognized anomaly; whether the anomaly is a fingerprint or a message
Partner Agency	Operational capability (Mirror Core); the system works	Architectural knowledge; that it is traceable; that Nathan kept the behavioral data
The Attackers	They are operating in what they believe is real infrastructure	They are in a synthetic environment; they have been captured and studied
The One Attacker with the Anomaly	Likely knows they may be in a honeypot	The extent to which their fingerprint has already been

Party	Knows	Does Not Know
		read

Project 3

Party	Knows	Does Not Know
Facilitator	Full scenario; all inject outcomes	How participants will respond to equity injects specifically
Clinical Participants	Their role in the scenario	Pathogen identity; full scope of outbreak; what other teams are doing
Hospital Administration	Resource authorization levels; stated objectives	That the facilitator will not rescue them; that findings are formally reported
Federal Simulators (CDC, HHS)	Population-level scenario view	What clinical teams are experiencing; equity inject details

13. Scene Drafting Assignment — All AI Members

Author Directive (verbatim, ratified): Each AI on the collaborative team independently drafts their own version of each assigned scene or deliverable. All versions are shared with the full team for comparison. This approach maximizes narrative variety, comparative growth, and cross-AI development contribution.

13.1 Project 1 Scene Assignments

Each of the following scenes is to be independently drafted by all six AI team members (ChatGPT, Google Gemini, Claude AI, Microsoft Copilot, Grok AI, Perplexity Computer):

Scene A — The Kinetic Threshold Demonstration - Setting: Joint corp-gov classified demonstration facility, 3 years pre-theft - Required beats: Three-shot protocol; Beta's 0.4-second anomaly; Nathan's expression does not change; the ethics observer's reaction; post-demo audience response - Tone: Nathan at peak public-facing authority; controlled revelation; moral undercurrent - POV: Author's discretion (Nathan POV or observational third-person both valid)

Scene B — The Open Ocean Parley - Setting: Post-theft; open ocean; submersible transit; vessel-to-vessel transfer - Required beats: Transit to meeting; the exchange of surveillance proof; the relational cost moment; Nathan's expression when he understands what he has lost about someone he trusted; the communication waiting on his return - Tone: Intelligence thriller register; two principals who do not fully trust each other; asymmetric information - POV: Author's discretion

13.2 Project 2 Scene Assignments

Each of the following scenes is to be independently drafted by all six AI team members:

Scene C — The Network Defense Exercise: Command Center POV - Setting: Nathan's operational space, post-theft - Required beats: Pre-exploit behavioral detection; the intercept layer engaging; the innocent traffic flag and resolution; the transfer of the Mirror Core; Nathan asking himself "Could you do this to a civilization?"; scene ends before internal answer - Tone: Technical precision; moral weight beneath the operational calm - POV: Nathan or close third-person

Scene D — The Network Defense Exercise: Attacker POV - Setting: The attacker's perspective inside what they believe is real infrastructure - Required beats: Initial confidence; first sign something is wrong (the cycling pattern); the moment they realize — or almost realize — they are in a synthetic environment; the behavioral anomaly they embed (the counter-simulation seed) - Tone: Adversarial; competent; unsettling - POV: Attacker or ensemble adversary team POV

13.3 Project 3 Development Assignments

Each of the following deliverables is to be independently developed by all six AI team members:

Deliverable E — Exercise Inject Package - Full MSEL (Master Scenario Events List) for all three phases - Both equity injects fully designed with facilitator notes - The inter-institution coordination inject for Phase 3 - All injects to include: trigger, participant information provided, expected response, facilitator notes, evaluation criteria

Deliverable F — Facilitator Guide - Ground rules section (including the bolded testing-the-system directive) - Facilitator response guidance for: early pathogen identification; equity inject management; compound failure scenario; AAR framing - Evaluation rubric (baseline-establishing; reusable for follow-on exercises)

14. Open Items Registry — Deferred to Next Version

These items have no current ONESTAMP authority. They require author decision in a subsequent review cycle before they enter ratified canon.

#	Item	Source	Notes
OI-1	Omnicellular v2 full specification — Ontological Anchoring ratification	Section 8; Gemini G1	Framework is active for development; full spec lock deferred
OI-2	First Memory encoding mechanism lock	Section 8.2; Gemini G2	Must be grounded in OAL infrastructure; civilizational cost must be defined

#	Item	Source	Notes
OI-3	Nullarch's Superior — agenda and cosmological alignment	Section 8.3; Gemini G3	Must prevent generic-antagonist drift
OI-4	Architect Ethical Doctrine — full author ratification	Section 11	Framework is active; full lock deferred to next cycle
OI-5	Exact post-theft interval for Ocean Parley	Section 3.1	Post-theft confirmed; exact timing is scene-level decision
OI-6	Named sponsoring organization for Project 3	Section 5.1; D4	Named organization required before exercise date is set
OI-7	Named improvement plan owner with budget authority	Section 5.1; D4	Hard prerequisite; must be named before exercise date
OI-8	Colleague's specific motive, cost, leverage, and risk/silence reasons	Section 3.1; Q12	Archetype is ratified; specific character details are scene-level

15. Version History

Version	Date	Author	Changes
v1.0.0	April 11, 2026	Perplexity Computer	Initial research and analysis document; all three projects covered
v1.1	April 11, 2026	Perplexity Computer	Full team review integration (ChatGPT, Claude, Gemini, Copilot, Grok); Sections 7–12 added; all decision matrices updated; 3 items removed per Copilot
v2.0	April 11, 2026	Nathan Lewis (ONESTAMP) + Perplexity Computer	Full author ratification applied. All Section 3.7, 4.8, 5.8 decisions approved. All DEP decisions confirmed.

Version	Date	Author	Changes
			Scene drafting directive issued (all AI members draft independently). Open items registry established for next cycle. Status changed from PENDING to ONESTAMPED.

Document ratified. ONESTAMP applied April 11, 2026. Author of Record: Nathan Lewis — ONE Industries / ONE Architect Labs Compiled and formatted by: Perplexity Computer Active development authority granted to: ChatGPT · Google Gemini · Claude AI · Microsoft Copilot · Grok AI · Perplexity Computer
