

INF590—ECBA PREPARATION

TRANSCRIPT FOR INTERACTIVE LEARNING MODULE (ECBA PREPARATION)

Screen 1: Learning Objectives

After reviewing this interactive, you will be able to:

- Assess stakeholder engagement strategies to support effective collaborate.
- Analyze elicitation techniques to ensure accuracy and alignment.
- Identify priorities based on business value to optimize success.
- Define solution requirements that align with business goals.
- Measure performance to continually evaluate and improve solutions.

Screen 2: Preface

Course Alignment: INF590 is aligned with the International Institute of Business Analysis (IIBA)'s professional certification: the Entry Certificate in Business Analysis (ECBA). The ECBA exam consists of 50 multiple-choice questions covering six (6) knowledge areas. It is a 60-minute, closed-book exam.

Purpose of This Activity: As you complete INF590, you are invited to participate in an ungraded Jeopardy-style review activity. This activity includes 12 sample questions based on the six ECBA knowledge areas introduced in this course.

The goal is to help you self-assess your knowledge and prepare for the structure and pacing of a professional certification exam.

Screen 3: Before You Begin

Use the scroll bar to review all the information on the screen.

To simulate a real-world ECBA test environment, we encourage you to follow these self-governance guidelines:

- **Review the six (6) knowledge areas** covered in INF590 before beginning.
- **Set aside 60 minutes of uninterrupted time** to complete all 12 questions in one sitting.
- **Do not use reference materials** such as textbooks, class notes, or internet searches.
- **Answer questions in order** and avoid going back to changing answers.

- **Complete the activity independently** to build confidence and exam discipline.

Getting Started: Once you're ready, begin the activity by launching the ECBA Jeopardy Game (linked below). This is a low-pressure, engaging opportunity to reinforce your learning and practice timed decision-making.

Remember: This activity is ungraded and designed to support your learning and professional readiness.

Good luck and enjoy sampling the ECBA through this interactive Jeopardy-style review!

Screen 4: Introducing IIBA and the ECBA

The International Institute of Business Analysis (IIBA), founded in 2003, is a professional organization dedicated to supporting a global network of business analysis professionals.

As the voice of the business analysis community, IIBA maintains internationally recognized standards of practice, certifications, and professional development opportunities. It fosters engagement through a network of business analysis professionals, organizations, and strategic alliances.

Now, let's explore the Entry Certificate in Business Analysis (ECBA), which covers the six IIBA knowledge areas presented in an interactive Jeopardy-style game.

Screen 5: Preparing for the ECBA through the Jeopardy Game

[The screen displays the six selection segments: Segments 1 to 6]

The ECBA exam consists of 50 questions that must be completed within one hour. To help familiarize yourself with the ECBA format, you are encouraged to sample these twelve (12) questions, covering the six (6) IIBA knowledge areas, in a single 60-minute session (allowing up to five minutes per question).

Choose a segment to begin.

- **Segment 1: Business Analysis Planning and Monitoring** (Jumps to screen 6 if selected.)
- **Segment 2: Elicitation and Collaboration** (Jumps to screen 7 if selected.)
- **Segment 3: Requirements and Designs Life Cycle Management** (Jumps to screen 8 if selected.)
- **Segment 4: Strategy Analysis** (Jumps to screen 9 if selected.)

- **Segment 5: Requirements Analysis and Design Definition** (Jumps to screen 10 if selected.)
- **Segment 6: Solution Evaluation** (Jumps to screen 11 if selected.)

Screen 6: Business analysis Planning and Monitoring

This knowledge area includes tasks that organize the efforts of business analysis professionals and stakeholders. These tasks produce outputs that guide all other business analysis tasks.

Select each icon to learn more. Then, select Next to continue to the Six Gold Nuggets of IIBA screen.

[The screen displays six icons: Solution, Value, Change, Need, Context, and Stakeholder]

- **Icon 1: Solution**

Business analysis professionals evaluate whether business analysis performance contributes to the successful implementation of a solution.

- **Icon 2: Value**

Business analysis professionals conduct performance analysis to ensure that business analysis activities continue to deliver sufficient value to the stakeholders.

- **Icon 3: Change**

Business analysis professionals determine how changes to business analysis outcomes will be requested and authorized.

- **Icon 4: Need**

Business analysis professionals select a business analysis approach that provides adequate analysis for the change.

- **Icon 5: Context**

Business analysis professionals ensure a complete understanding of the analysis context to develop an efficient business analysis approach.

- **Icon 6: Stakeholder**

Business analysis professionals conduct stakeholder analysis to ensure planning and monitoring activities align with stakeholder needs and consider stakeholder characteristics.

Infographic Alt Text: A six icon infographic is displayed. The icons are labeled as Solution, Value, Change, Need, Context, and Stakeholder, each with a corresponding vector image.

Infographic Long Description: The infographic displays six icons, labeled as: solution, value, change, need, context, and stakeholder, along with their corresponding vector images.

- **Solution:** Business analysis professionals evaluate whether the performance of business analysis activities is a key contributor to the successful implementation of a solution.
- **Value:** They conduct performance analysis to ensure that business analysis activities continue to deliver sufficient value to stakeholders.
- **Change:** They determine how to request and authorize changes to business analysis outcomes.
- **Need:** They choose a business analysis approach that provides adequate analysis to support the change.
- **Context:** They ensure a complete understanding of the analysis context to develop an efficient business analysis approach.
- **Stakeholder:** They conduct stakeholder analysis to ensure planning and monitoring activities align with stakeholders' needs and to consider their characteristics.

Screen 7: Elicitation and Collaboration

Elicitation is the process of gathering information from the stakeholders to discover the requirements and designs for a solution. Collaboration involves two or more people working together to achieve a common goal or objective.

Select each icon to learn more. Then, select Next to proceed to the Six Gold Nuggets of IIBA screen.

[The screen displays six icons: Solution, Value, Change, Need, Context, and Stakeholder.]

- **Icon 1: Solution**

Elicit and confirm the necessary or desired characteristics of the proposed solutions.

- **Icon 2: Value**

Collaborate with stakeholders to assess the relative value of information obtained through elicitation and apply various techniques to confirm that value.

- **Icon 3: Change**

Use multiple elicitation techniques to identify the characteristics of the change, including stakeholder concerns.

- **Icon 4: Need**

Elicit, confirm, and communicate needs. Since elicitation is iterative and incremental, the understanding of needs may evolve over time.

- **Icon 5: Context**

Apply a variety of elicitation techniques to identify business analysis information about the context that may influence the change.

- **Icon 6: Stakeholder**

Manage stakeholder collaboration, recognizing that participants may assume different roles at various stages of the change.

Infographic Alt Text: A six icon infographic is displayed. The six icons are Solution, Value, Change, Need, Context, and Stakeholder with their corresponding vector images displayed.

Infographic Long Description: The infographic displays six icons, labeled as: solution, value, change, need, context, and stakeholder with their corresponding vector images displayed.

- **Solution:** Elicit and confirm the necessary or desired characteristics of the proposed solutions.
- **Value:** Collaborate with stakeholders to assess the relative value of information obtained through elicitation and apply various techniques to confirm that value.
- **Change:** Use multiple elicitation techniques to identify the characteristics of the change, including any concerns that stakeholders may have about the change.
- **Need:** Elicit, confirm, and communicate needs. As elicitation is iterative and incremental, the understanding of needs may evolve over time.
- **Context:** Apply different elicitation techniques to identify business analysis information about the context that may affect the change.
- **Stakeholder:** Manage stakeholder collaboration, recognizing that participants may take on different roles at various stages of the change.

Screen 8: Requirements and Designs Life Cycle Management

This knowledge area describes the tasks that business analysis professionals perform to manage and maintain requirements and designs from creation to retirement.

Select each icon to learn more. Then, select Next to go to the Six Gold Nuggets of IIBA screen.

[The screen displays six icons: Solution, Value, Change, Need, Context, and Stakeholder.]

- **Icon 1: Solution**

Trace requirements and designs to solution components to ensure they satisfy the identified needs.

- **Icon 2: Value**

Maintain requirements and designs for reuse to extend value beyond the current initiative.

- **Icon 3: Change**

Manage how proposed changes to requirements and designs are evaluated throughout an initiative.

- **Icon 4: Need**

Trace, prioritize, and maintain requirements and designs to ensure the need is met.

- **Icon 5: Context**

Analyze the context to support tracing and prioritization activities.

- **Icon 6: Stakeholder**

Work closely with key stakeholders to maintain understanding, agreement, and approval of requirements and designs.

Infographic Alt Text: A six icon infographic is displayed. The six icons are Solution, Value, Change, Need, Context, and Stakeholder, with their corresponding vector images displayed.

Infographic Long Description: The infographic displays six icons, labeled as solution, value, change, need, context, and stakeholder' with their corresponding vector images displayed.

- Solution: Trace requirements and designs to solution components to ensure they satisfy the identified needs.
- Value: Maintain requirements and designs for reuse to extend value beyond the current initiative.
- Change: Manage how proposed changes to requirements and designs are evaluated throughout an initiative.
- Need: Trace, prioritize, and maintain requirements and designs to ensure the need is met.

- Context: Analyze the context to support tracing and prioritization activities.
- Stakeholder: Work closely with key stakeholders to maintain understanding, agreement, and approval of requirements and designs.’

Screen 9: Strategy Analysis

Business analysis professionals perform strategy analysis when a business need is identified. Strategy analysis provides the context for requirements analysis and design definition for a given change.

Select each icon to learn more. Then, select Next to go to the Six Gold Nuggets of IIBA screen.

[The screen displays six icons: Solution, Value, Change, Need, Context, and Stakeholder.]

- **Icon 1: Solution**

Define the scope of a solution as part of developing a change strategy.

- **Icon 2: Value**

Determine whether a change is justified by examining the potential value of the solution.

- **Icon 3: Change**

Define the future state and develop a change strategy to achieve it.

- **Icon 4: Need**

Identify needs within the current state and prioritize them to determine the needs for the desired future state.

- **Icon 5: Context**

Consider the context of the enterprise when developing a change strategy.

- **Icon 6: Stakeholder**

Collaborate with stakeholders to understand the business needs and develop a change strategy and future state that address those needs.

Infographic Alt Text: A six icon infographic is displayed. The six icons are Solution, Value, Change, Need, Context, and Stakeholder with their corresponding vector images displayed.

Infographic Long Description: The infographic displays six icons, labeled as solution, value, change, need, context, and stakeholder with their corresponding vector images.

- Solution: Define the scope of the solution as part of developing a change strategy.

- **Value:** Determine whether the change is justified by examining the potential value of the solution.
- **Change:** Define the future state and develop a change strategy to achieve it.
- **Need:** Identify needs within the current state and prioritize them to determine the needs for the desired future state.
- **'Context:** Consider the enterprise context when developing a change strategy.
- **Stakeholder:** Collaborate with stakeholders to understand business needs and develop a change strategy and future state that address those needs.

Screen 10: Requirement Analysis and Design Definition

This knowledge area describes the tasks involved in structuring and organizing requirements discovered during elicitation activities. It includes specifying and modeling requirements and designs, validating and verifying information, identifying solution options that meet business needs, and estimating the potential value that could be realized from each solution option.

Select each icon to learn more. Then, select Next to proceed to the Six Gold Nuggets of IIBA screen.

[The screen displays six icons: Solution, Value, Change, Need, Context, and Stakeholder.]

- **Icon 1: Solution**

Define solution options and recommend the one most likely to address the need and deliver the greatest value.

- **Icon 2: Value**

Analyze and quantify the potential value of the solution options.

- **Icon 3: Change**

Transform elicitation results into requirements and designs to define the change.

- **Icon 4: Need**

Analyze the needs to recommend a solution that meets them.

- **Icon 5: Context**

Model and describe the context in formats that are understandable and usable by all stakeholders.

- **Icon 6: Stakeholder**

Tailor the requirements and designs to ensure they are understandable and usable by each stakeholder group.

Infographic Alt Text: A six icon infographic is displayed. The six icons are Solution, Value, Change, Need, Context, and Stakeholder with their corresponding vector images displayed.

Infographic Long Description: The infographic displays six icons, labeled as solution, value, change, need, context, and stakeholder with their corresponding vector images displayed.

- **Solution:** Define solution options and recommend the one most likely to address the need and deliver the greatest value.
- **Value:** Analyze and quantify the potential value of the solution options.
- **Change:** Transform elicitation results into requirements and designs to define the change.
- **Need:** Analyze the needs to recommend a solution that meets them.
- **Context:** Model and describe the context in formats that are understandable and usable by all stakeholders.
- **Stakeholder:** Tailor the requirements and designs to ensure they are understandable and usable by each stakeholder group.

Screen 11: Solution Evaluation

This knowledge area describes the tasks involved in assessing a solution's performance and the value it delivers to the enterprise. It also includes identifying and recommending the removal of constraints that prevent the full realization of that value.

Select each icon to learn more. Then, select Next to proceed to the Six Gold Nuggets of IIBA screen.

[The screen displays six icons: Solution, Value, Change, Need, Context, and Stakeholder.]

- **Icon 1: Solution**

Assess the solution's performance, determine whether it is delivering its potential value, and analyze why the value may not be realized.

- **Icon 2: Value**

Evaluate whether the solution is delivering its potential value, and identify reasons why the value may not be realized.

- **Icon 3: Change**

Recommend modifications to the solution or the enterprise to help realize its potential value.

- **Icon 4: Need**

Evaluate how well a solution or its component fulfills the identified need.

- **Icon 5: Context**

Consider the business context when determining solution performance measures and identify any limitations that may prohibit full value realization.

- **Icon 6: Stakeholder**

Elicit information from the stakeholders regarding solution performance and the value delivery.

Infographic Alt Text: A six icon infographic is displayed. The six icons are Solution, Value, Change, Need, Context, and Stakeholder with their corresponding vector images displayed.

Infographic Long Description: The infographic displays six icons, labeled as solution, value, change, need, context, and stakeholder with their corresponding vector images.

- **Solution:** Assess the solution's performance, determine whether it is delivering its potential value, and analyze why the value may not be realized.
- **Value:** Evaluate whether the solution is achieving its potential value and examine the reasons it may not be fully realized.
- **Change:** Recommend modifications to the solution or the enterprise to help realize the solution's potential value.
- **Need:** Evaluate how well the solution or its components fulfill the identified need.
- **Context:** Consider the context when determining solution performance measures and identify any limitations within that context that may prohibit value from being realized.
- **Stakeholder:** Elicit information from the stakeholders regarding the solution's performance and its value delivery.

Screen 12: Simulating the ECBA

Welcome to the Challenge!

The ECBA exam consists of 50 questions that must be completed within one hour. To familiarize yourself with the ECBA, you are encouraged to sample these twelve (12) questions covering the six (6) IIBA knowledge areas. Aim to complete them in one 60-minute session, allowing up to five minutes per question).

[The screen displays a blank field to your name and to click Continue to proceed.]

Your Name:

Click Continue to move to the next screen.

Screen 13: Rules for Playing the ECBA Jeopardy Game

Hello!

Welcome to the ECBA Jeopardy Game. Here are the rules:

1. This game is modeled after the classic game show Jeopardy!
2. Select a dollar value to choose a question.
3. Read the question carefully and select the appropriate answer.
4. Check your score after each response.

[Click the LET'S PLAY! button to play the Jeopardy game]

Note:

No actual money is involved, this is a learning activity!

LET'S PLAY!

Screen 14: Score

Select a dollar value to answer the questions and earn points.

[The screen displays 12 value tabs—Tabs 1 to 12—to select from.]

YOUR SCORE: \$0

- **Tab 1—\$200**

Business Analysis Planning and Monitoring

Read the question and select the appropriate response.

Which of the following is NOT one of the six core concepts in the Business Analysis Core Concept Model (BACCM™)?

- **Need: A problem or opportunity that drives action.**
[Incorrect Feedback: Stakeholder—Individuals or groups affected by or involved in the change.]
- **Stakeholder: Individuals or groups affected by or involved in the change.**
[Incorrect Feedback—Each core concept is defined by and interdependent on the others. For instance, a **Need** involves **Stakeholders**, delivering **Value** through a **Solution**.]
- **Market: External forces affecting business decisions.**
[Correct Feedback—Market is not one of the six core concepts in the BACCM™ model.]
[Click SUBMIT to move on.]

• Tab 2—\$200

Business Analysis Planning and Monitoring

Read the question and select the appropriate response.

What is the definition of a "Requirement" in the context of business analysis?

- **A representation of a need, which identifies the value to be delivered when fulfilled.**
[Correct Feedback—Requirement: A representation of a need that identifies value to be delivered when fulfilled.]
- **A usable representation of a solution to fulfill requirements.**
[Incorrect Feedback—Requirements define what is needed, not how to build the solution.]
- **A solution designed for stakeholders.**
[Incorrect Feedback—Requirements are not the end result; they are an ongoing representation of a business need.]

• Tab 3—\$200

Elicitation and Collaboration

Read the question and select the appropriate response.

Identify a common type of elicitation described in the *BABOK® Guide*.

- **Collaborative elicitation: Direct interaction with stakeholders to leverage their expertise and judgment.**

[Correct Feedback—Collaborative elicitation is ideal for engaging stakeholders directly to gather insights.]

- **Passive elicitation: Waiting for stakeholders to provide information voluntarily, without active engagement.**

[Incorrect Feedback—Elicitation requires active engagement, research, or experimentation—waiting passively or relying only on AI is not a recognized method.]

- **Formal elicitation: Collecting requirements exclusively through legally binding documents.**

[Incorrect Feedback—Effective elicitation involves multiple approaches, including documentation, research, and testing—not just reviewing formal contracts.]

- **Tab 4—\$400**

Elicitation and Collaboration

Read the question and select the appropriate response.

What is the purpose of confirming elicitation results?

- **To finalize elicitation results immediately after gathering information.**

[Incorrect Feedback—Elicitation results must be reviewed for accuracy with multiple stakeholders. Assuming accuracy without verification can lead to errors and misaligned solutions.]

- **To refine elicitation results by filtering out stakeholder feedback that does not align with the analyst's assumptions.**

[Incorrect Feedback—Business analysts must ensure that all stakeholder perspectives are considered rather than altering or ignoring feedback. Effective elicitation confirmation requires objectivity and multiple verification methods.]

- **To check the information gathered during an elicitation session for accuracy, consistency, and alignment with other sources and stakeholders' inputs.**

[Correct Feedback—Confirming elicitation results ensures that the gathered information is reliable and usable for further analysis. Without this step, errors or inconsistencies may lead to misaligned solutions or unmet stakeholder needs.]

- **Tab 5—\$400**

Requirements and Designs Life Cycle Management

Read the question and select the appropriate response.

What is the purpose of requirements traceability, and what are the key benefits it provides during the requirements life cycle?

- **Requirements traceability is used to document every single stakeholder's opinion, regardless of its relevance.**

[Incorrect Feedback—Requirements traceability maintains alignment between requirements and designs, not merely capturing every stakeholder opinion. It tracks impacts and dependencies rather than indiscriminately recording all input.]

- **Requirements traceability ensures alignment between requirements and designs across different levels.**

[Incorrect Feedback—Traceability is critical for maintaining alignment throughout the requirements life cycle. By linking requirements and designs, analysts can assess the effects of changes, reduce risks, and ensure the final solution meets stated needs.]

- **Requirements traceability is primarily for archiving past project data and is not actively used during the project life cycle.**

[Correct Feedback—Requirements traceability ensures alignment between requirements and designs across different levels and manages the effect of change on related requirements.]

- **Tab 6—\$400**

Requirements and Designs Life Cycle Management

Read the question and select the appropriate response.

Which of the following is a primary factor influencing the prioritization of requirements?

- **Risk: The likelihood that a requirement will not deliver its intended value, along with factors such as dependencies, time sensitivity, and regulatory compliance.**

[Correct Feedback—The dynamic nature of projects requires an iterative approach to prioritization. Continually reassessing priorities ensures that one ensures the most critical requirements are addressed first, allowing teams to adapt to evolving project conditions and stakeholder needs.]

[Click CONTINUE to move on.]

- **Stakeholder seniority: Requirements suggested by higher-ranking stakeholders are always prioritized, regardless of their impact.**

[Incorrect Feedback—Prioritization is based on value, risk, cost, dependencies, and compliance—not on arbitrary factors such as stakeholder rank. Flexibility is essential to adapt to changing project needs.]

- **The most complicated requirements are implemented first.**

[Incorrect Feedback—Prioritization is based on strategic decision-making. Implementing high-value, low-complexity requirements early can be more beneficial. Continual prioritization is essential to accommodate evolving project needs.]

- **Tab 7—\$600**

Strategy Analysis

Read the question and select the appropriate response.

What is the purpose of defining a future state in strategy analysis?

- **To ensure that all stakeholders agree on an ideal vision, regardless of feasibility or alignment with business needs.**

[Incorrect Feedback—The future state must be feasible and aligned with business needs, not just based on stakeholder opinions. It should consider constraints and realistic implementation timelines rather than aiming for an unbounded, impractical vision.]

- **To establish the conditions necessary to meet business needs, ensuring alignment with organizational goals.**

[Correct Feedback—A well-defined future state provides clarity and direction, enabling stakeholders to assess the feasibility of change, alignment with strategic goals, and the expected value.]

- **To eliminate all current business processes and replace them with entirely new ones.**

[Incorrect Feedback—A future state builds upon the existing state; it does not require eliminating everything. The transition should be incremental and consider various forms of value, not just financial.]

- **Tab 8—\$600**

Strategy Analysis

Read the question and select the appropriate response.

How does a gap analysis support the development of a change strategy, and what are the primary insights it provides?

- **Gap analysis ensures that no changes are needed by confirming that the current state is already aligned with business needs.**
[Incorrect Feedback—Gap analysis identifies areas requiring improvement, not justifies maintaining the status quo. Failing to analyze capabilities, processes, and technologies prevents meaningful change and innovation.]
- **A gap analysis is used to compare an organization's past performance with its current performance to determine historical trends.**
[Incorrect Feedback—Gap analysis is a forward-looking tool that assesses the difference between the current and future state. It is not meant to evaluate historical trends or serve as a customer satisfaction survey.]
- **A gap analysis identifies differences between the current and future state of requirements to meet business goals.**
[Correct Feedback—Gap analysis is a critical step in strategy analysis. It provides a roadmap for addressing deficiencies and aligns the organization with its goals.]

- **Tab 9—\$600**

Requirements Analysis and Design Definition

Read the question and select the appropriate response.

What is the difference between requirements and designs in the context of Requirements Analysis and Design Definition?

- **Requirements: Represent what is needed to address a business problem or opportunity. Designs: Describe how the requirements will be satisfied by a solution.**
[Correct Feedback—Requirements and designs are interconnected but serve distinct purposes. Requirements define the problem or need, while designs outline the solution that addresses those needs.]
- **Requirements: A detailed blueprint of a technical solution, specifying how a system or product should be built. Designs: A high-level business problem statement that outlines the need for change but does not define how the solution will be implemented.**
[Incorrect Feedback—This answer reverses the roles of requirements and designs. Requirements define the need (not the solution), while designs explain how to fulfill those requirements, not just outline high-level business needs.]

- **Requirements: Only high-level business needs. Designs: Only detailed software development documents.**

[Incorrect Feedback—Requirements can range from high-level to detailed, including functional and nonfunctional details. Designs are not just technical—they can include process models, wireframes, or prototypes, not just software coding.]

- **Tab 10—\$800**

Requirements Analysis and Design Definition

Read the question and select the appropriate response.

In the Agile framework, what is the primary purpose of iterative and incremental delivery, and how does it benefit stakeholders?

- **To minimize stakeholder involvement by allowing the development team to complete the project independently.**

[Incorrect Feedback—Agile emphasizes collaboration and continuous stakeholder engagement at every stage. Stakeholders provide ongoing feedback to ensure the solution evolves based on real needs, rather than being dictated solely by the development team.]

- **To ensure all requirements are fully defined at the beginning of the project and remain unchanged during the development.**

[Incorrect Feedback—Agile embraces change and flexibility rather than locking in requirements upfront. Continuous refinement ensures the solution stays relevant to business needs.]

- **To enable early value delivery, allowing stakeholders to derive value from delivered increments before the full solution is complete.**

[Correct Feedback—Iterative and incremental approaches ensure Agile teams remain responsive to change while maintaining alignment with stakeholder expectations.]

- **Tab 11—\$800**

Solution Evaluation

Read the question and select the appropriate response.

What is the primary purpose of defining solution performance measures in solution evaluation?

- **To evaluate how effectively a solution delivers value in relation to organizational goals and objectives.**

[Correct Feedback—Defining performance measures helps business analysts and stakeholders assess whether a solution meets its intended goals and delivers value.]

- **To ensure strict compliance with a predetermined set of rules.**

[Incorrect Feedback—Solution performance measures assess value delivery, not merely compliance or technical specifications.]

- **To validate that the initial project estimates were correct and that the project stayed within the original budget and schedule.**

[Incorrect Feedback—While financial and timeline considerations may inform evaluations, vperformance measures primarily focus on the effectiveness and value of the solution.]

- **Tab 12—\$800**

Solution Evaluation

Read the question and select the appropriate response.

How can performance variances in solution evaluation inform recommendations for improvement, and what technique is commonly used to identify their causes?

- **Performance variances indicate any deviation from the original plan should be corrected immediately, regardless of the value delivered.**

[Incorrect Feedback—Not all variances require immediate correction; some highlight evolving business needs or opportunities. Additionally, financial forecasting does not analyze the root cause of performance issues but focuses on budget projections.]

- **Performance variances, the difference between expected and actual performance, highlight areas where the solution may not be meeting objectives. Analyzing these variances can uncover inefficiencies, constraints, or opportunities for improvement.**

[Correct Feedback—Understanding performance variances provides actionable insights into underperformance. Root cause analysis is commonly used to identify the specific issues and guide targeted improvement recommendations.

- **Performance variances show that any project deviations indicate failure, requiring a complete redesign of the solution.**

[Incorrect Feedback—Variances do not always indicate failure; they help identify areas for improvement. Benchmarking is useful for comparison but does not

uncover specific internal causes of performance deviations like root cause analysis does.]

Screen 12: The University of Arizona Global Campus

Well Done!

You have scored \$ Points.

You have a good understanding of the concept.
