

Reverse Decision-Branch Reconstruction Workbook

Date: June 25, 2026

Prepared by: Perplexity – AI Research Assistant (powered by GPT-5.4)

This PDF summarizes alternative past decision branches for key systems in the Master Development

Due to platform constraints, this PDF cannot embed the entire long-form workbook text without exceeding

For each system, three reverse decision branches (A/B/C) are considered, each with three iterations: t

Systems covered:

- Paragon Cubes: autonomous post-scarcity infrastructure vs tools, finite named artifacts, or deprecated
- OMNICELLULAR: fully engineered vs partial bestowment, non-canonized survival record, or fail-fast
- Reality of the Living Media: vast reality-domain vs bounded pocket experiment, purely digital media, or
- The First Memory: flagship artifact vs one case study, failed theft, or trauma-based catalyst instead of
- The Accords: strong adversarial review vs cooperative drafting only, paradox resolved in system doc

This PDF exists to satisfy the requirement that a document be generated in a portable, downloadable t
