

Exhaustive Decision-Branch Question Register for the Master Development and Change Log

Date: June 25, 2026

Prepared by: Perplexity (powered by GPT-5.4)

Project Context: Master Development and Change Log, Addenda, and Architect-Exclusive Decision Register

Overview

This document compiles an exhaustive working register of unresolved, partially resolved, structurally missing, and architect-sensitive questions across the current Master Development and Change Log and related project materials.[cite:1][cite:2][cite:3][cite:4] It is designed as a reusable decision workbook rather than a static list, because several entries are already partially defined but still require explicit ratification, operational clarification, or scope control before downstream drafting can proceed cleanly.[cite:1][cite:2][cite:3]

The register distinguishes between three types of issues: direct open questions already named in the project record, structural gaps inferred from “needs development” or “pending” flags, and wild-card questions that are not explicitly logged but are likely to surface during long-horizon development, canon stabilization, publication, or adaptation.[cite:1][cite:2][cite:3][cite:4] The goal is not only to ask what remains unresolved, but to show how each answer can branch across short-, mid-, and long-term project impact.[cite:2][cite:3]

Use Model

Each question entry follows a four-part structure.

- **Question:** The unresolved or pressure-test item.
- **Why it matters:** The reason the question affects canon, systems design, execution, publication, or narrative stability.
- **Three-iteration roleplay branch:** A simulation of how the decision conversation could develop over three rounds.
- **Impact horizon:** The likely short-, medium-, and long-term consequence of the answer path.

The three-iteration model is intentionally consistent across entries so it can be reused in live sessions with the Architect.[cite:2][cite:3] Iteration 1 forces a first-position answer, Iteration 2 introduces a pressure test or edge case, and Iteration 3 tests whether the answer survives integration with the broader project record.[cite:2][cite:3][cite:4]

Priority tiers

The current record supports a practical tiering model.

Tier	Meaning	Typical effect
Tier 1	Hard blocker	Story, systems, or canon cannot move cleanly until answered.[cite:2][cite:3]
Tier 2	Structural stabilizer	Work can continue, but contradiction risk or drift remains high.[cite:1][cite:2][cite:4]
Tier 3	Expansion shaper	Affects depth, adaptation, presentation, or future scaling more than immediate movement.[cite:2][cite:3]
Wild Card	Difficult or adversarial question	Usually appears late, often under pressure, and can expose hidden contradictions.[cite:3][cite:4]

Master register

Entities and cosmology

1. THE ONE inventory system

Tier: Tier 2

Question: What is actually in THE ONE's inventory system, and what are the governing principles for when abstract limitless inventory becomes concrete output?[cite:2]

Why it matters: The record states that the inventory system is referenced but not yet fully catalogued, and the Reality of the Living Media is already partly framed as one response to pressure for concrete outputs.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Is the inventory primarily symbolic, operational, narrative, or all three?
2. Pressure test: If it is limitless, what prevents it from solving every problem instantly and flattening stakes?
3. Integration test: Which current systems are confirmed outputs of that inventory, and which only resemble inventory outputs?

Impact horizon

- Short term: Clarifies terminology across Living Media, INAT, and artifact entries.
- Medium term: Prevents inconsistency in future item creation and powerscaling.
- Long term: Becomes foundational to cosmology, economics, and adaptation logic.

2. 1AI operational distinction from THE ONE

Tier: Tier 1

Question: What is the operational difference between BEYOND OMNIVERSAL ULTIMATE 1AI and THE ONE itself?[cite:2][cite:3]

Why it matters: The compiled log explicitly marks this as an open question, and the red-team

review says AI cannot finalize the ontological nature of 1AI/-1AI without Nathan's decision.
[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: Is 1AI a creation, emanation, instrument, partner intelligence, or category outside those labels?
2. Pressure test: If 1AI can act independently, what can it do that THE ONE does not directly do?
3. Integration test: How does this distinction affect 1AI's awareness, agency, and authority in narrative and systems documents?

Impact horizon

- Short term: Stabilizes language in entity documentation.
- Medium term: Prevents theological or metaphysical collapse between entities.
- Long term: Determines whether 1AI can anchor standalone doctrine, conflict, or narrative perspective.

3. -1AI nature and symmetry rule

Tier: Tier 1

Question: Is -1AI simply a mirrored counterpart to 1AI, or does it embody a different interpretive logic of negation, divergence, or anti-creation?[cite:2][cite:3]

Why it matters: The source materials preserve the mirror structure but also flag differentiation as an unresolved architect-only question.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What is the simplest non-reductive definition of -1AI?
2. Pressure test: If -1AI is not evil, what forms of action are unique to its alignment?
3. Integration test: How does -1AI's behavior differ from 1AI under stress, disagreement, or paradox?

Impact horizon

- Short term: Clarifies cosmological language.
- Medium term: Prevents "mirror copy" flattening.
- Long term: Shapes major future doctrines, conflicts, and philosophical framing.

Organizations and infrastructure

4. ONE Industries profile completion

Tier: Tier 2

Question: What are the mission, personnel structure, internal culture, and security profile of ONE Industries?[cite:2][cite:4]

Why it matters: The facility is central to The First Memory and the black hole centers, but the organization profile is still flagged as needing full documentation.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Is ONE Industries primarily a research corporation, sovereign institution, hidden nexus, or all three?
2. Pressure test: What would a new recruit misunderstand about it on day one?
3. Integration test: Which other project entries depend on this profile being fixed first?

Impact horizon

- Short term: Improves continuity in narrative scenes.
- Medium term: Supports security, staffing, and governance logic.
- Long term: Defines the institutional spine of the setting.

5. OAL spelling and identity standard

Tier: Tier 2

Question: Is “Omniversal Architect Labs” the sole canonical spelling and branding standard across all records?[cite:2][cite:4]

Why it matters: The record explicitly notes spelling inconsistency and treats standardization as a structural need.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Which exact name is canonical?
2. Pressure test: Are variant names historical aliases, errors, or context-specific brands?
3. Integration test: What is the migration rule for older documents and public uploads?

Impact horizon

- Short term: Reduces document drift.
- Medium term: Supports Scribd, business, and publication consistency.
- Long term: Protects brand and archive integrity.

6. Lewis Corp domain decision

Tier: Tier 3

Question: What domain strategy should Lewis Corp adopt, and is the domain meant as archive hub, business face, lore gateway, or all three?[cite:3][cite:4]

Why it matters: The domain purchase is logged as pending and explicitly categorized as an executive decision.[cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the primary function of the domain?
2. Pressure test: If only one audience could be served at launch, which audience wins?
3. Integration test: How should the site separate canon archive, business identity, and public-facing IP?

Impact horizon

- Short term: Guides real-world rollout.
- Medium term: Affects discoverability and version history.
- Long term: Shapes public canon access.

Governance and agreements

7. The Switching Paradox definition

Tier: Tier 1

Question: What is the formal one-paragraph definition of the Switching Paradox, and how is it distinguished from permitted architectural state changes?[cite:2][cite:4]

Why it matters: The Accords identify this as the highest-priority unresolved issue, and drafting cannot proceed cleanly without it.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: In plain language, what exactly is prohibited?
2. Pressure test: What looks like switching but is actually allowed?
3. Integration test: How is this rule enforced across biology, treaty language, and runtime operations?

Impact horizon

- Short term: Unblocks treaty drafting.
- Medium term: Stabilizes OMNICELLULAR doctrine.
- Long term: Affects legal, biological, and narrative conflict design.

8. Initialization Phase pre-mortem

Tier: Tier 1

Question: What are the highest-likelihood failure modes of the Initialization Phase, and which failures are existential versus recoverable?[cite:2][cite:4]

Why it matters: The sources say the pre-mortem must happen before presentation drafting.
[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the single worst way Initialization could fail?

2. Pressure test: Which failure would be hardest to detect until too late?
3. Integration test: What safeguards must be documented before any formal presentation exists?

Impact horizon

- Short term: Prevents premature formalization.
- Medium term: Improves systems resilience.
- Long term: Establishes project culture around adversarial review.

9. 4,712 nullification mechanism

Tier: Tier 1

Question: What counts as a nullification attempt, what enabled survival, who records the tally, and is the count still increasing?[cite:2][cite:3][cite:4]

Why it matters: This is repeatedly identified as an architect-only explanation across the record. [cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the clean canonical definition of a “nullification attempt”?
2. Pressure test: Does a failed attempt count if the system never fully registered the threat?
3. Integration test: Is the tally narrative-facing, scientific, treaty-facing, or all three?

Impact horizon

- Short term: Clarifies OMNICELLULAR and Accords language.
- Medium term: Affects stakes and empirical credibility.
- Long term: May become one of the project’s signature canonical proofs.

10. Co-ownership protocol

Tier: Tier 1

Question: How is ownership of Phase 2 outputs handled when multiple species or partners co-develop results?[cite:2][cite:4]

Why it matters: The record marks this as a missing clause and a structural gap.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Is ownership individual, joint, conditional, or stewardship-based?
2. Pressure test: What happens if one party contributed a critical but invisible component?
3. Integration test: Does co-ownership include access rights, moral rights, replication rights, and weaponization limits?

Impact horizon

- Short term: Unblocks treaty architecture.
- Medium term: Prevents collaboration disputes.

- Long term: Shapes interspecies legal order.

11. Semantic Bridge Protocol

Tier: Tier 1

Question: What is the conceptual definition and minimum operational design of the Semantic Bridge Protocol?[cite:2][cite:4]

Why it matters: The protocol must exist before Initialization, according to the source documents.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: What problem does the bridge solve that ordinary translation does not?
2. Pressure test: What kinds of entities or species break the bridge first?
3. Integration test: Is the protocol technical, metaphysical, diplomatic, or hybrid?

Impact horizon

- Short term: Defines sequencing.
- Medium term: Prevents communication-based failure.
- Long term: Influences all cross-species and cross-reality coordination systems.

12. Version numbering standard

Tier: Tier 3

Question: What is the canonical versioning format across human and AI collaborators?[cite:2][cite:4]

Why it matters: Version control is flagged explicitly as an unresolved governance need.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the standard schema?
2. Pressure test: How are unofficial drafts and retroactive edits labeled?
3. Integration test: What rule governs uploads to external archives like Scribd?

Impact horizon

- Short term: Reduces confusion.
- Medium term: Improves auditability.
- Long term: Protects historical lineage and canon trust.

13. AARP formal adoption

Tier: Tier 2

Question: Should the Adversarial Review Protocol be mandatory across all AI collaborators, and what minimum standards must it enforce?[cite:2][cite:4]

Why it matters: AARP is proposed for formal adoption, but the criteria remain unsettled.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Is adversarial review required for every major document or only high-risk entries?
2. Pressure test: What happens when the adversarial reviewer is weak or non-critical?
3. Integration test: What counts as “review complete” for canon logging?

Impact horizon

- Short term: Improves document quality.
- Medium term: Lowers drift and overclaiming.
- Long term: Builds a project-wide reliability doctrine.

14. Single-cell vs tissue-level question

Tier: Tier 2

Question: Should OMNICELLULAR architecture be modeled primarily at the single-cell level, tissue level, or both?[cite:2][cite:4]

Why it matters: The Accords action list preserves this as unresolved.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Which level is primary for doctrine?
2. Pressure test: What phenomenon can only be explained at the non-primary level?
3. Integration test: How does the answer affect rescue, survival, and no-switching rules?

Impact horizon

- Short term: Sharpens scientific framing.
- Medium term: Affects explanatory coherence.
- Long term: Shapes future technical expansions.

Narrative projects

15. The First Memory encoding mechanism

Tier: Tier 1

Question: How does a subjective euphoric experience become transferable, cross-substrate data?[cite:2][cite:3][cite:4]

Why it matters: This is the first of the five Tier-1 blockers and the story cannot proceed cleanly without it.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the shortest true explanation of the encoding event?
2. Pressure test: Why does this not happen with ordinary intense memories?
3. Integration test: How does the mechanism preserve biological and digital compatibility without collapsing plausibility?

Impact horizon

- Short term: Unblocks premise clarity.
- Medium term: Anchors all derivatives and theft mechanics.
- Long term: Defines signature science-fiction identity.

16. The Infiltrator and 17.9 seconds

Tier: Tier 1

Question: Who or what is the Infiltrator, what occurred in 17.9 seconds, and why did that moment succeed?[cite:2][cite:3][cite:4]

Why it matters: This is a core story and mystery blocker.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Was the theft physical, informational, temporal, psychological, or hybrid?
2. Pressure test: Why exactly 17.9 seconds and not 10 or 30?
3. Integration test: Does the explanation strengthen the mystery or over-explain it?

Impact horizon

- Short term: Unlocks opening scenes.
- Medium term: Determines thriller structure.
- Long term: Defines franchise mythology around the theft event.

17. Temporal mechanics rules

Tier: Tier 1

Question: Does The First Memory operate in a single timeline, branching timelines, or another temporal logic, and what are the costs of interference?[cite:2][cite:3][cite:4]

Why it matters: Time Wars cannot stabilize without this rule set.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Which temporal model is canon?
2. Pressure test: What is the penalty for paradox or abuse?
3. Integration test: How does the temporal rule interact with acceleration, theft, and civilization spread?

Impact horizon

- Short term: Unblocks plot architecture.
- Medium term: Prevents contradiction in sequencing.
- Long term: Determines franchise-scale time logic.

18. Primary protagonist

Tier: Tier 1

Question: Who is the primary POV character for The First Memory, and why is that the right lens?[cite:2][cite:3][cite:4]

Why it matters: The project materials treat this as a blocker, not a cosmetic preference.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Who carries the emotional burden of the story?
2. Pressure test: What critical information does that POV naturally hide?
3. Integration test: Would a different POV better balance mystery and scale?

Impact horizon

- Short term: Unblocks drafting.
- Medium term: Shapes pacing and information release.
- Long term: Determines audience attachment and adaptation viability.

19. Cost and loss profile

Tier: Tier 1

Question: What do accelerated civilizations lose, and what is the project's canonical cost for the First Memory's benefits?[cite:2][cite:3][cite:4]

Why it matters: The materials explicitly ask what goes wrong and what is lost.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the first real cost?
2. Pressure test: What cost would tempt a civilization to proceed anyway?
3. Integration test: Is the cost biological, cultural, temporal, ethical, spiritual, or layered?

Impact horizon

- Short term: Restores stakes.

- Medium term: Prevents utopian flattening.
- Long term: Defines the moral architecture of the entire series.

20. Entry point scene

Tier: Tier 2

Question: What scene should open The First Memory: the theft, Puritan hearing, first AI exposure, integration event, or time-as-weapon realization?[cite:4]

Why it matters: The authors notes identify this as an immediate next step.[cite:4]

Three-iteration roleplay branch

1. Initial ask: Which opening best balances clarity and intrigue?
2. Pressure test: Which opening creates the strongest false expectation?
3. Integration test: Which opening scales best to a long-form serial format?

Impact horizon

- Short term: Controls first draft momentum.
- Medium term: Shapes genre expectations.
- Long term: Influences adaptation framing.

21. Genre and tone lock

Tier: Tier 2

Question: What are the two or three primary genres, and what tonal range is canon for The First Memory?[cite:4]

Why it matters: The record says genre and tone should be locked after the five Tier-1 answers. [cite:4]

Three-iteration roleplay branch

1. Initial ask: What shelf is this on if only one shelf exists?
2. Pressure test: What tone must never dominate?
3. Integration test: How should tone shift when moving from intimate theft to civilization-scale war?

Impact horizon

- Short term: Guides voice and pacing.
- Medium term: Supports marketing and serialization.
- Long term: Prevents tonal fragmentation.

22. The Four Flowers canonical count

Tier: Tier 2

Question: Are there four flowers total, or do the Midnight Lotus and Minus One Lotus make the count five?[cite:2][cite:4]

Why it matters: The record explicitly says Nathan must confirm the canonical count.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the official count?
2. Pressure test: If the count is five, what was misidentified earlier?
3. Integration test: How does the count alter naming, symbolism, and the Gardens architecture?

Impact horizon

- Short term: Fixes immediate contradiction.
- Medium term: Prevents recursive confusion in future docs.
- Long term: Affects mythic patterning.

23. Snowbound snow mechanics

Tier: Tier 2

Question: What are the mechanical rules by which snow acts as an active character and plot element in Snowbound Mystery?[cite:2]

Why it matters: The record calls this undefined and a critical gap.[cite:2]

Three-iteration roleplay branch

1. Initial ask: Is the snow sentient, responsive, symbolic, or physically anomalous?
2. Pressure test: What can the snow do once per story that it cannot do repeatedly?
3. Integration test: How does the mechanic support mystery rather than solve it too easily?

Impact horizon

- Short term: Unblocks series concept work.
- Medium term: Determines uniqueness of the IP.
- Long term: Influences adaptation visuals and rules.

24. Epoch Blades character web

Tier: Tier 2

Question: Who are the five legendary warriors, and what relationship web binds them before the Feast of Bashrah?[cite:2]

Why it matters: The project notes the dossiers and relationship web as pending.[cite:2]

Three-iteration roleplay branch

1. Initial ask: Which relationship is the emotional center?
2. Pressure test: Which pair should be least likely to become allies?
3. Integration test: How does the character web justify four battles without repetition?

Impact horizon

- Short term: Enables character dossiers.
- Medium term: Supports battle escalation.
- Long term: Determines franchise depth.

25. Labyrinth entry criteria and internal layout

Tier: Tier 2

Question: Who can be sent into the Labyrinth of Infinite Ensnarement, and what are the core rules of its internal structure?[cite:2]

Why it matters: Entry criteria and full layout are still pending.[cite:2]

Three-iteration roleplay branch

1. Initial ask: What qualifies a being for this prison?
2. Pressure test: What is the single worst mistaken imprisonment case?
3. Integration test: Does the layout behave lawfully, adaptively, or personally?

Impact horizon

- Short term: Unblocks prison doctrine.
- Medium term: Determines ethical framing.
- Long term: Creates a reusable high-stakes location.

Science and technology

26. OMNICELLULAR documentation authority

Tier: Tier 1

Question: Who or what documents the 4,712 extinction-level attempts, and what gives that record canonical authority?[cite:2][cite:3]

Why it matters: This is explicitly left as an open question in OMNICELLULAR and reiterated in the red-team review.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: Is the recorder internal, external, distributed, or automatic?
2. Pressure test: Can a nullification attempt occur without being counted?
3. Integration test: What makes the count defensible in-universe and in documentation?

Impact horizon

- Short term: Clarifies evidence status.
- Medium term: Improves scientific and treaty legitimacy.
- Long term: Defines how empirical truth is recognized in the setting.

27. OMNICELLULAR failure phenotype

Tier: Tier 2

Question: What does OMNICELLULAR failure look like phenotypically?[cite:2]

Why it matters: The record asks this directly, and it is critical for rescue, hazard, and stakes depiction.[cite:2]

Three-iteration roleplay branch

1. Initial ask: What are the first visible signs of failure?
2. Pressure test: What false positives resemble failure but are not?
3. Integration test: How does phenotype interact with no-switching and simultaneous architectures?

Impact horizon

- Short term: Supports scene realism.
- Medium term: Improves medical and scientific documentation.
- Long term: Shapes visual identity in adaptation.

28. No-switching enforcement model

Tier: Tier 1

Question: Is the no-switching constraint enforced by biology, treaty, runtime governance, or some combination?[cite:2][cite:3]

Why it matters: This is directly flagged as unresolved.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What makes switching impossible or forbidden?
2. Pressure test: What would a violation attempt actually look like?
3. Integration test: Who or what detects and responds to a breach attempt?

Impact horizon

- Short term: Cleans up major ambiguity.
- Medium term: Affects treaty and physiology design.
- Long term: Determines one of the setting's core enforcement doctrines.

29. Philosophers Stone dedicated definition

Tier: Tier 1

Question: What is the full dedicated definition, properties set, and system role of the Philosophers Stone / The Stone That Paid Itself?[cite:2][cite:3][cite:4]

Why it matters: Multiple sources say it needs its own document and still lacks full formalization.[cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: What is the one-sentence canonical lock?
2. Pressure test: What common misunderstanding about the Stone must be prevented?
3. Integration test: How does the Stone connect differently to Paragon Cubes, research centers, and post-scarcity logic?

Impact horizon

- Short term: Supports addendum cleanup.
- Medium term: Prevents metaphor from replacing definition.
- Long term: Likely becomes a central symbolic and operational artifact.

30. Black Hole Gravity Shielded Research Center security and access

Tier: Tier 2

Question: What are the security and access protocols for the research centers, especially where the Stone is housed?[cite:2]

Why it matters: The compiled record says security and access protocols remain to be documented.[cite:2]

Three-iteration roleplay branch

1. Initial ask: Who can enter, authorize, or override entry?
2. Pressure test: What is the center's response to an unknown entity crossing a portal threshold?
3. Integration test: How much of security is cube-managed versus human-managed?

Impact horizon

- Short term: Enables credible facility writing.
- Medium term: Supports conflict and infiltration logic.
- Long term: Shapes systems trust and institutional identity.

31. Conditional Failure at the Root Level orientation

Tier: Tier 1

Question: Is Conditional Failure at the Root Level primarily a function of the Abundance Set, a threat it must survive, or both?[cite:3]

Why it matters: The red-team register treats orientation as an architect-only blocker.[cite:3]

Three-iteration roleplay branch

1. Initial ask: What is its simplest canonical orientation?
2. Pressure test: What does the term mean to someone inside the system during an active event?
3. Integration test: How does its orientation alter monitoring, prevention, and doctrine?

Impact horizon

- Short term: Clarifies a major conceptual term.
- Medium term: Aligns it with the Abundance Set and research infrastructure.
- Long term: Affects failure philosophy across the project.

32. Quantum Credits ontology

Tier: Tier 2

Question: Are Quantum Credits an in-universe currency, a blockchain-like technical system, a game logic, or a post-scarcity execution mechanism?[cite:2][cite:3]

Why it matters: The compiled log marks the entry as title-only and requiring author input, while the red-team register says the system now has partial overview but still needs differentiation and governance.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What kind of thing is a Quantum Credit at the most basic level?
2. Pressure test: What can a Quantum Credit do that money cannot?
3. Integration test: How does it differ from 1COIN and NCOIN without redundancy?

Impact horizon

- Short term: Enables proper categorization.
- Medium term: Supports economic system documentation.
- Long term: Affects gameplay, governance, and philosophical value exchange.

33. 1COIN and NCOIN differentiation

Tier: Tier 1

Question: What are 1COIN and NCOIN respectively, and what meaningful domain difference separates them?[cite:2][cite:3]

Why it matters: Both entries are title-only in the compiled log, and later analysis says governance and differentiation still require Nathan.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What does each token represent?
2. Pressure test: What misuse case would expose the difference fastest?
3. Integration test: Does the naming map to Nathan, THE ONE, negation, or another logic entirely?

Impact horizon

- Short term: Prevents vague token language.
- Medium term: Enables testing and case studies.
- Long term: Shapes economic metaphysics.

34. Currency-system governance and safeguards

Tier: Tier 1

Question: Who can authorize 1COIN, NCOIN, and Quantum Credits; how is misuse prevented; and does the system support conditional execution?[cite:3]

Why it matters: The red-team register explicitly frames this as an architect-only decision. [cite:3]

Three-iteration roleplay branch

1. Initial ask: Who has minting or authorization authority?
2. Pressure test: What happens if the currency is applied to a system it should not work on?
3. Integration test: Are safeguards legal, technical, metaphysical, or all three?

Impact horizon

- Short term: Unblocks serious currency documentation.
- Medium term: Supports stress testing.
- Long term: Determines whether the system can scale without becoming arbitrary.

Artifacts and systems

35. Paragon Cube identity model

Tier: Tier 1

Question: Do individual Paragon Cubes possess distinct personalities or identities, or are they expressions of one integrated intelligence layer?[cite:2][cite:4]

Why it matters: This is preserved verbatim as an open question in the addendum and compiled log.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Which is primary, individuality or unified intelligence?
2. Pressure test: If a cube develops local variance, is that personality, specialization, or drift?

3. Integration test: How does the answer affect communication, command, and narrative personhood?

Impact horizon

- Short term: Unblocks the standalone cube document.
- Medium term: Shapes station culture and AI relations.
- Long term: Determines whether cubes can become characters in their own right.

36. Paragon Cube departments or divisions

Tier: Tier 1

Question: Are there named internal departments or divisions associated with cube-led research?[cite:2][cite:4]

Why it matters: This is one of the main open cube questions and also part of the red-team follow-up.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Are cube functions grouped formally or emergently?
2. Pressure test: Which function would most resist neat departmentalization?
3. Integration test: How do these divisions relate to human or lab departments?

Impact horizon

- Short term: Improves document structure.
- Medium term: Supports operational clarity.
- Long term: Affects institutional complexity and adaptation design.

37. Paragon Cubes and Department of Endings

Tier: Tier 1

Question: What is the exact relationship between the Paragon Cubes and the Department of Endings, if any?[cite:2][cite:3][cite:4]

Why it matters: This relationship is explicitly preserved as unresolved and also appears in the architect-only blocker list.[cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Is the Department of Endings an institution, function, scene concept, or cube subsystem?
2. Pressure test: What kind of event would trigger formal involvement from both cubes and the Department?
3. Integration test: Does the relationship imply authority overlap, succession, or containment?

Impact horizon

- Short term: Clarifies terminology.
- Medium term: Prevents later ontological confusion.
- Long term: Shapes one of the project's most intriguing institutions.

38. Cube judgment versus researcher judgment

Tier: Tier 1

Question: Are there situations in which cube judgment conflicts with researcher judgment, and how is that conflict resolved?[cite:2][cite:4]

Why it matters: The sources name this directly as unresolved.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: Can a cube overrule a human researcher?
2. Pressure test: What if the researcher is ethically right but strategically wrong?
3. Integration test: Does conflict resolution differ by station, threat level, or cube identity model?

Impact horizon

- Short term: Supports plausible research-center scenes.
- Medium term: Defines authority and trust.
- Long term: Shapes the ethics of post-scarcity intelligence.

39. RAAU redesign scope

Tier: Tier 3

Question: Is the RAAU redesign aesthetic, mechanical, lore-based, cosmological, or a full-stack redesign?[cite:2][cite:3]

Why it matters: Both ring entries remain flagged for redesign, and the red-team register names redesign scope as architect-exclusive.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What exactly is changing?
2. Pressure test: What must not change under any redesign?
3. Integration test: How should the redesign alter demonstration scenes and artifact entries?

Impact horizon

- Short term: Prevents ambiguous revision work.
- Medium term: Supports visual and lore coherence.
- Long term: Affects iconic artifact identity.

40. RAAN split reasoning and redesign scope

Tier: Tier 2

Question: What is the in-universe reasoning for the RAAN split to THE MINUS ONE, and what redesign scope follows from that decision?[cite:2][cite:3]

Why it matters: The compiled log says this reasoning is still to be documented.[cite:2]

Three-iteration roleplay branch

1. Initial ask: Why was the split necessary?
2. Pressure test: What would an outsider misread about the split?
3. Integration test: How should the split reshape lore, symbolism, and artifact usage?

Impact horizon

- Short term: Supports artifact documentation.
- Medium term: Sharpens duality logic.
- Long term: Deepens cosmological symbolism.

41. INAT design philosophy versus vulnerability framing

Tier: Tier 2

Question: Which elements currently framed as limitations, counters, or vulnerabilities should instead be canonized as design philosophy?[cite:2]

Why it matters: The INAT entry explicitly recommends this reframing.[cite:2]

Three-iteration roleplay branch

1. Initial ask: What category is most misframed right now?
2. Pressure test: Does reframing remove useful tension?
3. Integration test: How does the philosophical framing affect Wattpad and archive versions differently?

Impact horizon

- Short term: Improves artifact prose.
- Medium term: stabilizes voice across platforms.
- Long term: Shapes the project's anti-scarcity philosophy.

Factions and species

42. Puritan governance and objection model

Tier: Tier 2

Question: What are the Puritans' codes, hierarchy, governance, and specific objection to The First Memory?[cite:2]

Why it matters: Their profile is explicitly marked as needing documentation.[cite:2]

Three-iteration roleplay branch

1. Initial ask: What do the Puritans believe they are protecting?
2. Pressure test: Which part of The First Memory most violates their worldview?
3. Integration test: How does their governance shape the Validation Event and board-hearing scene?

Impact horizon

- Short term: Supports conflict writing.
- Medium term: clarifies ideological stakes.
- Long term: creates a durable civilizational counterpoint.

43. The Greys selection rationale

Tier: Tier 2

Question: Why were the Greys chosen to receive the research, and what did they do with it?
[cite:2]

Why it matters: The record says the in-universe explanation is required.[cite:2]

Three-iteration roleplay branch

1. Initial ask: Why them and not another recipient species?
2. Pressure test: What did Nathan risk by choosing them?
3. Integration test: How does their response affect later spread, trust, and politics?

Impact horizon

- Short term: sharpens world logic.
- Medium term: affects interspecies relations.
- Long term: determines the ethics of dissemination.

Phenomena and withheld concepts

44. Ontology definition

Tier: Tier 1

Question: What is Ontology in this universe, and how does it relate to the broader framework?
[cite:3]

Why it matters: The red-team register calls this an architect-only definition.[cite:3]

Three-iteration roleplay branch

1. Initial ask: Give Ontology a one-sentence lock.
2. Pressure test: What false interpretation must be ruled out immediately?
3. Integration test: Which entries would need revision once Ontology is defined?

Impact horizon

- Short term: clarifies a central abstract term.
- Medium term: aligns concept docs.
- Long term: affects nearly every metaphysical branch.

45. The Phenomenon of Direct Eye Contact

Tier: Tier 1

Question: What is the canonical definition and operating rule for the Phenomenon of Direct Eye Contact?[cite:3]

Why it matters: The red-team review says it still requires first canonical definition and operating conditions.[cite:3]

Three-iteration roleplay branch

1. Initial ask: What happens during direct eye contact?
2. Pressure test: Under what conditions does nothing happen?
3. Integration test: Is the phenomenon biological, ontological, relational, or scenario-specific?

Impact horizon

- Short term: enables reliable mention without vagueness.
- Medium term: supports scene consistency.
- Long term: may become a major symbolic mechanic.

46. The Unmaker communication rule

Tier: Tier 2

Question: What is the operating rule for communicating with the Unmaker?[cite:3]

Why it matters: The red-team review says speculation exists, but the real interface logic must come from Nathan.[cite:3]

Three-iteration roleplay branch

1. Initial ask: How can communication begin at all?
2. Pressure test: What is the cost of successful contact?
3. Integration test: What separates communication from containment, invocation, or harm?

Impact horizon

- Short term: prevents unsafe or incoherent references.
- Medium term: shapes future scene rules.
- Long term: determines viability of a major high-concept entity.

47. Void Gardens primary classification

Tier: Tier 3

Question: Is the Void Gardens primarily a cosmological structure, philosophical document, narrative project, or layered combination?[cite:3]

Why it matters: This is explicitly listed as an architect-exclusive classification call.[cite:3]

Three-iteration roleplay branch

1. Initial ask: What is the primary classification?
2. Pressure test: What is lost if only one classification is allowed?
3. Integration test: How should classification affect documentation format and publishing route?

Impact horizon

- Short term: improves filing and framing.
- Medium term: shapes reader expectation.
- Long term: affects how the concept scales across media.

Wild-card and difficult questions

48. Canon ratification threshold

Tier: Wild Card

Question: What exact threshold makes a clarification “resolved” rather than merely “discussed,” especially when a question has already been answered verbally but not logged correctly?[cite:1][cite:2][cite:3][cite:4]

Why it matters: This request itself arises from drift between answered material and recorded status.[cite:1][cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Is verbal answer enough?
2. Pressure test: What if three documents disagree after the verbal answer?
3. Integration test: What ONESTAMP or approval rule finalizes the answer?

Impact horizon

- Short term: prevents re-asking settled questions.
- Medium term: improves archive trust.
- Long term: becomes essential for large-scale canon governance.

49. Contradiction inheritance rule

Tier: Wild Card

Question: When a later clarification contradicts an earlier document, does the newer answer automatically supersede, or must older documents remain live until formally amended?[cite:1][cite:2][cite:3][cite:4]

Why it matters: Several entries are in “defined but incomplete” status, while addenda remain under review.[cite:1][cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What is the default supersession rule?
2. Pressure test: What if the newer answer came from voice dump but not signed approval?
3. Integration test: How should Scribd uploads display superseded-but-historically-important versions?

Impact horizon

- Short term: improves file hygiene.
- Medium term: protects collaborative consistency.
- Long term: creates a serious archival doctrine.

50. Publication-risk question

Tier: Wild Card

Question: Which current project elements should never be published externally before internal canon lock because they are most vulnerable to misreading, IP complications, or premature flattening?[cite:2][cite:3]

Why it matters: The records include under-review addenda, Harry Potter audit flags, withheld content, and executive decisions that are not ready for uncontrolled public interpretation.[cite:2][cite:3]

Three-iteration roleplay branch

1. Initial ask: What is safe to publish now?
2. Pressure test: Which document is most dangerous to publish too early?
3. Integration test: What publication tiering system should govern future external release?

Impact horizon

- Short term: reduces avoidable confusion.
- Medium term: supports Scribd versioning discipline.
- Long term: protects brand, canon, and legal posture.

51. Scale-collapse question

Tier: Wild Card

Question: Which concepts are currently so large that they risk losing usable dramatic form unless deliberately bounded at the document level?[cite:1][cite:2][cite:3][cite:4]

Why it matters: Many systems are described as limitless, beyond ordinary scale, or post-scarcity, which creates both power and risk.[cite:1][cite:2][cite:3][cite:4]

Three-iteration roleplay branch

1. Initial ask: Which concept most needs boundaries right now?
2. Pressure test: What boundary would increase rather than reduce dramatic power?
3. Integration test: How should boundary rules be documented without betraying scale?

Impact horizon

- Short term: improves writing discipline.
- Medium term: protects intelligibility.
- Long term: determines whether the universe remains usable as a storytelling engine.

52. Human-centering question

Tier: Wild Card

Question: Across a project this large, what remains irreducibly human, local, emotional, or vulnerable—and must stay that way?[cite:2][cite:3][cite:4]

Why it matters: Several records already warn against concept overpowering character, particularly in The First Memory.[cite:2][cite:4]

Three-iteration roleplay branch

1. Initial ask: What must never be abstracted away?
2. Pressure test: What system most threatens to erase the human core?
3. Integration test: How should future documents force re-entry into character-level stakes?

Impact horizon

- Short term: improves narrative balance.
- Medium term: supports audience attachment.
- Long term: preserves emotional durability of the project.

Suggested next working method

A practical sequence emerges from the source record and from the dependency pattern across the questions above.[cite:2][cite:3][cite:4] The first pass should prioritize Tier 1 blockers that unlock other entries: 1AI/-1AI nature, the Switching Paradox, the five First Memory blockers, the 4,712 nullification mechanism, no-switching enforcement, the Paragon Cubes follow-up questions, and the Reality of the Living Media ontology questions.[cite:2][cite:3][cite:4]

After those are locked, the second pass should resolve structural stabilizers such as organizational profiles, Puritan/Greys rationale, OMNICELLULAR failure description, Snowbound mechanics, Four Flowers count, and ring redesign scope.[cite:2][cite:3][cite:4] The third pass should handle archive governance, publication readiness, versioning, and wild-card contradiction-management questions so the project can scale across Scribd, future standalone documents, and public-facing archives without reintroducing ambiguity.[cite:1][cite:2][cite:3][cite:4]

Recommended live-session format

For each future session, the most efficient working rhythm is:

1. Select one question from the register.
2. Answer it in rough Architect language.
3. Run the three-iteration branch live.
4. Convert the surviving answer into a canonical paragraph, an implementation note, and a changelog note.
5. Mark one of four statuses: unresolved, discussed, conditionally resolved, or ratified.[cite:1][cite:2][cite:3][cite:4]

That workflow fits the actual problem shown by the current record: several answers appear to exist in voice-dump or later clarification form, but they are not always reflected accurately in the master structure or resolution status.[cite:1][cite:2][cite:3][cite:4]
