OAL — Labyrinth of Infinite Ensnarement | Cycle 2 Research Reconciliation and Provenance Baseline — ChatGPT v0.1

Prepared by ChatGPT (OpenAI)

November 13, 2026

OAL — LABYRINTH OF INFINITE ENSNAREMENT

CYCLE 2 RESEARCH RECONCILIATION AND PROVENANCE BASELINE — CHATGPT v0.1

Document ID: OAL-LOIE-C2-001-CHATGPT-v0.1
Prepared by: ChatGPT (OpenAI), independent reconciliation contributor
Architect and Author of Record: Nathan Ashton Arik Lewis II
Prepared: November 13, 2026
Purpose: Cross-AI circulation, review, evidence correction, and preparation of controlled Cycle 2 testing
Controlling fictional source: *Master Development and Change Log* v2.3, especially Entry 26
Approval state: Research synthesis / **NOT CANON**; no ONESTAMP applied; not an authorization to conduct live confinement experiments
Repository destination proposed: Labyrinth-of-Infinite-Ensnarement/03-Cross-AI-Reviews-and-Synthesis/
Supersession: New reconciliation artifact, not a replacement for any contributor's dossier or research prompt.

> **Document-control notice.** Publication, electronic signature, research acceptance, and canon ratification are not interchangeable. This document identifies established source content, competing proposals, provisional conclusions, possible factual corrections, and decisions reserved for the Architect. It must not be used to represent hypothetical people, extraterrestrial workers, infinite spaces, or fictional technologies as empirically demonstrated.

1. Executive determination

Cycle 1 generated six research dossiers attributed to ChatGPT, Perplexity, Grok, Gemini, Copilot, and Claude. Five systems comprise the currently active academic collaboration roster, while Claude's historical contribution remains relevant evidence for this specific Labyrinth project. The Cycle 2 response packet brings together peer assessments, corrections, and preliminary next-step directions. It is **not** a six-party vote on a finished architecture: submissions were prepared at different times, several contributors read earlier work, and Copilot's latest Cycle 2 response was not supplied in the packet.

Reconciliation disposition: Proceed with a controlled Cycle 2 baseline and prospective eligibility test. Do not select a final governance model, ratify admission/sentencing rules, define the Spider Caste by inference, place the Founding Architects in the Labyrinth by inference, or presume that designed-to-fail research cells have an infallible parent boundary. The available evidence supports preparing competing designs and testable hypotheses—not declaring fictional mechanisms verified.

What may be carried forward now: (1) Entry 26's recorded characteristics; (2) the Architect's explicit request to investigate deliberate, observed, iterative containment failures; (3) distinctions among entity capability, justified intervention, sentence, experimental participation, and the safety of a specific containment method; (4) an accountable research process, with correction logs and independent evaluation; (5) extraterrestrial staffing as a key design requirement whose exclusivity is unresolved.

What cannot be promoted to fact now: complete monitoring of infinite interiors; universal energy harvesting from one recorded bolt absorption; Spider Caste roles, loyalty, or personhood; automatically trustworthy extraterrestrial or AI workers; BTEC as a physical lock; definitive empirical advantage of a mixed workforce; constitutional validity established by author-generated hypothetical scenarios; lawful release as already canon.

2. Sources and limits of reconciliation

2.1 Primary supplied material examined

Ref	Source	Role in this report	Limits
SRC-01	*Master Development and Change Log* v2.3 (Grok compilation)	Controlling record for Entry 26 and related-entry status	Some linked frameworks remain under review and cannot all be called canon
SRC-02	*Master Development and Change Log* v2.0	Historical comparison	Superseded for this review when v2.3 differs
SRC-03	OAL_LOIE_Independent_Research_Execution_ChatGPT_v1.0.md	ChatGPT independent dossier	Scenarios and budgets illustrative; prospective blind test not executed
SRC-04	Perplexity Research Package v1.0, including dossier, policy script, CSV fixtures, evidence register and manifest	Seven-gate candidate and reproducible synthetic policy checks	Code-based fixtures cannot prove independent or unbiased adjudication
SRC-05	OAL-LABYRINTH-RESEARCH-	Containment concepts, FA-Q8,	Conceptual; citation markup may not be

Ref	Source	Role in this report	Limits
	DOSSIER-GROK-v0.1.md	boundary risks	export-ready
SRC-06	OAL-LABYRINTH-RESEARCH-DOSSIER-CLAUDE_v0.1.pdf	Six-gate role-reversal analysis and governance alternatives	A single analyst's non-blind scenario assessment
SRC-07	Gemini dossier v1.0, Markdown and PDF	Seven hypothesis judgments, topology candidates, narrative exhibits	Some conclusions overstate support, precision, preregistration and consensus
SRC-08	Copilot independent adversarial execution v1.0, DOCX and PDF	Custody states, control planes, federated governance candidate	Attribution and evidentiary detail require audit; latest Cycle 2 feedback absent
SRC-09	CYCLE 2 RESPONSES.docx (26 pages)	Compiled second-round critiques and next-step recommendations	Attributions disputed; Copilot update explicitly omitted; statements are not automatically endorsed by six systems
SRC-10	Architect's November 2026 notes in the supplied research-prompt materials	Author direction: expected-failure learning, eligibility testing, ET staffing, environments, funding	Not a completed canonical implementation specification

This reconciliation integrates those source documents. Where a contributor reports that an external study was verified, the report records that assertion but does not silently elevate it to independently verified fact. A limited primary-source check was performed for prisoner-research protections, international correctional standards, NSF SaTC program scope, and existence of the AISI sandbox benchmark. The comprehensive source-level verification queue remains open.

2.2 Reconciliation labels

- **CANON-E26:** Expressly established in Entry 26 of the controlling master registry.
- **REGISTRY-UNDER-REVIEW:** Documented in another master-registry entry whose stated approval status is not locked canon.
- **ARCHITECT-DIRECTION:** A current research or development instruction from the Architect, not necessarily a new fictional-world rule.

- **EMPIRICAL-VERIFIED:** A bounded claim independently checked against an accessible primary/official source for this reconciliation.
- **REPORTED-UNVERIFIED:** Asserted in a dossier or cycle response; primary confirmation or exact provenance remains incomplete.
- **ANALOGY:** Real-world research used to investigate a fictional situation; it cannot prove speculative mechanics.
- **PROPOSAL:** A new model, setting rule, test, governance feature, or operational structure awaiting approval.
- **OPEN-AUTHOR:** A choice the Architect has not yet settled.
- **CORRECTION-PENDING:** A candidate amendment to a source claim that requires source or attribution verification.

3. Canon and author-direction boundary

3.1 Entry 26: controlling established characteristics

The Labyrinth is described as the ultimate prison, inescapable by design. Its exterior is cubic, its interior dimensions are infinite, and it radiates a persistent white glow. In the recorded creation scene an energy bolt thrown by the Architect is absorbed. Its sentence-language is so extensive that the end of time would not make a dent. The Spider Caste exists and was designed by the Architect, without a settled role or physiology. WHITE is baseline alert status; sectional RED denotes an incident. Entry criteria and full internal layout remain open. Its possible connection to the displacement and confinement of the Founding Architects is open.

Negative controls: The creation scene does not establish that the Labyrinth absorbs all forms of energy, turns escape attempts into power, or has selective sensor-compatible absorption. The white glow does not establish that every cell is permanently lit. ‘Infinite internal dimensions’ does not automatically decide the mathematical form of infinity or guarantee total operational observability. The Spider Caste’s existence does not define warden rank, biological nature, loyalty, or individual rights.

3.2 Separate status of Entry 6 and connected OAL frameworks

Entry 6 — Founding Architects: classified **Documented Framework — Under Review**, not Entry 26 canon. The source records an overthrow/seizure involving the Architect and a brother, absorbed architecture, and the prior coalition being contained rather than permanently destroyed. The location, authority basis, exact acts, and relationship to the Labyrinth are not established. FA-Q8 asks whether absorbed Maker architecture retains active intent; it is an open risk, not a confirmed attack path.

Other connected entries: EAMA, Invocation Framework, Deception Architecture, Void Sentry Orb, Paragon Cubes, Boundary Dimension, MVES, OMNICELLULAR, and BTEC retain the statuses and limitations assigned to their own entries. Do not collectively call them canon or install them into the Labyrinth by cross-reference. OMNICELLULAR engineering is not a bestowment; 1AI and -1AI are not ordinary bot staff. BTEC must not be represented as a demonstrated physical mechanism.

3.3 New Architect research direction preserved

The Architect described a difficult-to-study entity moving through sequential containment environments **designed to fail**. Researchers observe the breach mechanism and generate subsequent environments from what they learn. Escalation is not assumed proportional to difficulty or punishment; the team investigates why a breach occurred and what each side learns. Both the research subject and investigators understand their roles, but this does not by itself establish voluntary participation, meaningful consent, or freedom to withdraw.

The Architect additionally asked whether a Founding Architect could meet legitimate containment criteria, what conduct would qualify, whether criteria can be tested, and whether status alone changes the decision. This invites hypothesis-based evaluation; it does not establish guilt, a location of imprisonment, or an approved sentencing framework.

4. Contributor provenance and dependence

Contributor	Cycle 1 output	Distinctive contribution	Dependency / uncertainty	Reconciled disposition
ChatGPT	v1.0 dossier; 14 eligibility situations, 14 trial concepts, 22-item risk register	Censored no-breach outcomes, role-masking design, continuity cases	Proposed blind testing not yet conducted; unsourced illustrative budget ranges	Retain as scenario source, revise cost section
Perplexity	v1.0 package; seven gates, scenario CSVs, Python policy evaluation	Machine-readable fixtures; safety of containment method as separate gate	Role field absent from decide() in cited test; expected labels authored with rules; historical scenario labels familiar	Retain reproducibility, do not call role invariance independent fairness proof
Grok	v0.1 dossier; breach taxonomy, topology and Maker-intent concerns	Registry-sensitive speculative pressure tests	Many mechanisms provisional; citation formatting issues; test detail comparatively thin	Retain as design pressure and hypothesis inventory
Claude	v0.1 dossier and historical peer comments	Sovereign recusal paradox, six-gate logic, 10-case role	Not blind; scenario and rule construction	Retain findings with provenance caveats

Contributor	Cycle 1 output	Distinctive contribution	Dependency / uncertainty	Reconciled disposition
		reversal	interdependent; disputed compiled attribution	
Gemini	v1.0 dossier and Cycle 2 synthesis	Topology options, imaginative exhibits, five-plane model, multi-trial concepts	Some apparent empirical precision fictional; 'all six agree' not established; preregistration claim unsupported	Retain models; downgrade categorical claims; mark narrative assumptions
Copilot	v1.0 dossier	Seven custody states, eight control functions, candidate federated model, evaluator influence problem	Read peers before execution; borrowed gates need explicit attribution; latest Cycle 2 feedback absent	Retain model as candidate, not independent validation

Important distinction: There are six historical dossier contributors. The *Cycle 2 response packet* is not itself six independently obtained final review statements. Copilot's current response is expressly missing. No vote, tally, or consensus lock should be inferred from this packet.

5. Consolidated corrections and evidence audit

5.1 Source and documentation corrections

ID	Issue	Reconciled assessment	Action / owner
COR-01	Entry 6 occasionally called fully canon	Inaccurate status flattening: documented framework under review	All contributors: reflect exact entry-level status

ID	Issue	Reconciled assessment	Action / owner
COR-02	‘All six AIs agree’ / ‘settled design law’	Overstatement without six contemporaneous responses or formal vote	Gemini / synthesis editor: list actual endorsers and dissent
COR-03	Claude versus Perplexity text attribution in compiled responses	Disputed in SRC-09; original-message evidence needed	Architect / provenance custodian: preserve originals, issue correction memo
COR-04	Copilot Cycle 2 response	Explicitly not included due to split thread; not a missing research dossier	Packet editor: label ‘latest response not provided’
COR-05	‘Pre-registered’ tests	Criteria and example sets largely created/reviewed in the same development phase; no prospective freeze demonstrated	All: use ‘retrospective/provisional’ until future charter hash and release timestamps exist
COR-06	Perplexity 0/42 role-change result	decide() ignores role label; test verifies label independence by construction, not fair adjudication	Perplexity + independent reviewers: test full workflow incl. evaluator bias and jurisdiction
COR-07	42/42 expected fixtures	Reproduction supports internal consistency only; expectations not independent ground truth	All: annotate with test limitations
COR-08	Research counts, scores and timing in fictional trials	May be illustrative, not measured	Gemini / other contributors: identify synthetic values or remove precision
COR-09	‘Zero-compute WHITE’ and universal energy harvesting	Not established by Entry 26	All: reclassify as proposals; no inherited canon
COR-10	Spider Caste	Role and	All: do not assign

ID	Issue	Reconciled assessment	Action / owner
	incorruptible, automatically obedient, or wardens	consciousness remain open	traits without author approval
COR-11	ET biological staff immune to cyber/social compromise; AI immune to coercion	Unsupported generalizations	All: replace with role-specific failure assumptions
COR-12	BTEC physically locks the Unmaker	Exceeds documented conceptual/documentary scope	All: prohibit as factual/canonical claim
COR-13	MVES maps infinity, finite monitoring is complete	No provided demonstration of infinite coverage	All: restrict claims to specified active regions and fictional assumptions
COR-14	Single White-glow rule automatically violates prisoner-lighting standard	Glow reach and internal lighting are unresolved; rule concerns dark/constantly lit cells as punishment/restriction	All: express as conditional welfare issue
COR-15	'Indefinite (>15 days)'	In Mandela Rules, >15 consecutive days defines *prolonged solitary*, not every form of indefinite detention	All: separate duration, solitary, and lighting topics
COR-16	Three-step 'no Maker code' guarantee	Conflicts with possibility of inherited/derived architecture; lineage unresolved	Gemini: propose provenance audit and exception analysis instead of unconditional ban
COR-17	One-way emergency power to tighten confinement	Risk of custody ratchet and wrongful indefinite restriction	Governance designers: require expiration, review, reversal
COR-18	Policy options labeled A/B/C or 'Option B'	Labels refer to different dimensions across authors	All: adopt codes in Section 6
COR-19	OpenAI / AISI /	Multiple claims and	Source auditor: pin

ID	Issue	Reconciled assessment	Action / owner
	Anthropic / Trail of Bits incident dates and details	corrections in SRC-09; not all independently checked herein	exact primary releases, version, scenario and allowed privileges
COR-20	External budget ranges ($3k–$80k) in ChatGPT v1.0	Planning illustrations only; no vendor quotes	ChatGPT: withdraw as estimates for funding decisions
COR-21	Funding calls current/open/eligible	Subject to changing dates, eligibility and solicitations	Source auditor: official portal checks at time of application
COR-22	'Fourth Anthropic incident'	Source attribution uncertain; provider reports and aggregators may count differently	Source auditor: distinguish provider report from compiled third-party count
COR-23	Fictional narrative depicts a Founding Architect inside the Labyrinth	Scenario is not historical confirmation	Gemini: add 'counterfactual / assumes disputed relationship' header
COR-24	Strong efficacy statements from 12/14/42 internally generated cases	Do not establish general performance, fairness, or validity	All: downgrade to pilot results and test on independent holdouts

5.2 Narrow primary-source checks for this reconciliation

UN Mandela Rules. Official UNODC text, Rule 43(1)(c), prohibits placement in a dark or constantly lit cell among proscribed restrictions or disciplinary sanctions. Rule 44 defines prolonged solitary confinement as exceeding 15 consecutive days. **Reconciled use:** An ethical analogue for human custodial settings; not proof that the Labyrinth's white exterior glow reaches every cell, and not proof that the same legal instrument governs fictional extraterrestrial species. Primary source: https://www.unodc.org/documents/justice-and-prison-reform/Nelson_Mandela_Rules-E-ebook.pdf

HHS prisoner research. The current HHS 45 CFR 46 Subpart C specifically adds protections for certain research involving prisoners, including IRB composition and permissible research categories for research within its scope. A fictional statement that the subject 'knows the rules' is not a substitute for a valid research-authorization framework. The regulation is not asserted to govern fictional extraterrestrial captivity. Primary: https://www.hhs.gov/ohrp/regulations-and-policy/regulations/45-cfr-46/common-rule-subpart-c/index.html

NSF SaTC. The National Science Foundation maintains a Security, Privacy, and Trust in Cyberspace program under solicitation NSF 25-515; relevant only to qualifying real-world security/privacy research and eligible applicants. It does **not** fund a fictional extraterrestrial

prison as such. Verify dates, grant category, and eligibility at application time. Primary: https://www.nsf.gov/funding/opportunities/nsf-satc-us-national-science-foundation-security-privacy-trust/nsf25-515/solicitation

AISI benchmark. The UK AI Security Institute published a March 2026 description of SandboxEscapeBench. Its existence and stated purpose can support studying controlled evaluation of specific sandbox breakouts. Claims of 'universal AI escape', later-version saturation scores, and incident generalizations must be checked against the exact benchmark version and tested conditions. Official portal: https://www.aisi.gov.uk/blog

Not completed in this pass: line-by-line confirmation of all 2026 corporate incident notices; precise Trail of Bits first/second/third escape chronology; current DARPA BAA eligibility; all individual scholarly citations cited in six dossiers; claimed SandboxEscapeBench v3 pass@5 figures. Treat these as verification tasks, not completed corrections.

6. Shared terminology and architecture crosswalk

These namespace conventions prevent 'Option B' from referring to three unrelated designs. They are **research notation**, not canon names.

Namespace	Code	Candidate	Description
Research placement	RP-IN	Internal	Designed-to-fail research sector within Labyrinth
Research placement	RP-ADJ	Adjacent/precursor	Separate proving ground linked by validated research outputs
Research placement	RP-SEP	Independent	Distinct program with no automatic custody relationship
Research placement	RP-SIM	Simulated-only	Models, digital twins, formal exercises without live entity testing
Governance	GOV-SOV	Sovereign	Central Architect authority and delegated wardens
Governance	GOV-FED	Federated constitutional	Shared, bounded powers with appeal/recusal functions
Governance	GOV-TRT	Treaty/distributed	Multiple independent custodians or

Namespace	Code	Candidate	Description
			authorities
Governance	GOV-HYB	Hybrid	Separates functional powers while preserving defined sovereign domain
Control functional domains	CF-CONT	Containment	Custody boundary and authorized movement controls
Control functional domains	CF-LIFE	Life safety/habitat	Safety-critical environmental operations
Control functional domains	CF-ID	Identity	Entity and actor continuity, authentication
Control functional domains	CF-AUTH	Authority	Jurisdiction, permissions, conflict of interest
Control functional domains	CF-REC	Records	Evidence, case files, integrity, provenance
Control functional domains	CF-OVS	Oversight	Independent inspection, appeals, corrections
Control functional domains	CF-RSCH	Research	Trial hypotheses, participation authorization, stop rules
Control functional domains	CF-OPS	Operations	Scheduling, staffing, logistics, incident coordination

Plane-count reconciliation: Some contributors propose five, six, or eight planes. This is not yet a factual contradiction: one model combines records and custody, another separates research, another treats incident command as cross-cutting. Compare required functions, decision rights, trust boundaries, failover and **shared dependencies** first; determine deployable planes only after identifying independence requirements. Eight columns on a diagram do not create eight independent systems if they use the same root identity, power, time reference, or evidence database.

Boundary-event codes: BE-T (expected test-shell breach); BE-S (unplanned sector movement); BE-C (custody/staff/control compromise); BE-I (information/influence crossing); BE-X (identity/copy crossing); BE-E (ultimate unauthorized exterior breach); BE-R (authorized release/transfer); BE-O (observer/instrumentation error). An observed failure should always specify its **boundary**, not just say ‘escape’.

7. Reconciled findings and dissent

ID	Shared research proposition	Current level	Remaining dissent / limitation
SYN-01	Status or power alone does not prove criminal guilt	Strongly supported normative research direction	Architect has not approved fictional criminal law; protective hazard cases differ
SYN-02	Containment capability differs from necessity and method safety	Useful across dossiers	How to measure method safety for reality-sustaining entities remains open
SYN-03	Deliberate inner breach differs from exterior escape	Shared conceptual distinction	Whether research is inside LOIE undecided
SYN-04	'Inescapable' may distinguish unauthorized departure from authorized release	Strong candidate interpretation	Architect may select absolute no-departure interpretation
SYN-05	Research subject understanding is not equivalent to valid consent	Supported ethical analogy	Fictional rules and whether subjects can decline remain open
SYN-06	More difficult containment does not necessarily mean more learning	Supported design hypothesis	No completed bilateral learning measurement
SYN-07	Mixed ET/AI/other staff could reduce single-origin dependencies	Plausible proposal	No real ET workforce evidence; heterogeneous systems can share a root flaw
SYN-08	Bounded management surface can help administer registered active sectors	Plausible topology model	Does not prove total knowledge over infinite regions
SYN-09	Different functions should not share unlimited authority	Strong security/governance design candidate	Specific control-plane number and relation to sovereign authority unresolved
SYN-10	Independent	Strong process	Existing examples

ID	Shared research proposition	Current level	Remaining dissent / limitation
	eligibility tests are needed	recommendation	are contaminated by prior circulation; must prepare fresh holdouts
SYN-11	Financial incentives tied to incarceration/breach counts create governance risks	Plausible institutional design concern	Funding structure not decided, no real-world LOIE financing
SYN-12	Parent-boundary assurance must not be taken for granted	Cross-contributor adversarial concern	Cannot prove a fictional 'ultimate envelope' from real testing

7.1 Concrete disagreements to preserve

D-01 — Research placement. Some prefer RP-ADJ to isolate custody from experiments; RP-IN is more directly connected to the Labyrinth's central premise; RP-SEP protects conceptual independence. No placement approved.

D-02 — Governance. Copilot favors GOV-FED as primary candidate; Claude suggests hybrid; other dossiers retain GOV-SOV and GOV-TRT as foils. The unresolved Invocation Framework / EAMA authority relationship is a design dependency, not an inconvenience to bypass.

D-03 — Sentencing. The team often recommends 'no unauthorized departure' but the exact meaning of the sentence outlasting time is OPEN-AUTHOR. Proportionality, review, exceptions and procedure should be developed as **alternatives**, not locked features.

D-04 — Maker inheritance. Gemini's proposed unconditional exclusion of absorbed Maker code is not validated against Entry 6 and FA-Q8; a provenance-based risk analysis is a more disciplined starting point.

D-05 — Experimental data. Fictional numbers or trial verdict tallies are not independent evidence. Where reproducible synthetic tools exist, distinguish code reproduction, construct validity, and external validation.

8. Unified decision register for the Architect

Decision IDs are stable research references, **not approvals**. All default dispositions are 'open'. The team can model alternatives without requiring immediate answers.

ID	Reserved decision	Research options	Blocking consequence
ADR-01	Meaning of	No unauthorized exit	Release, transfer,

ID	Reserved decision	Research options	Blocking consequence
	inescapable	/ no departure whatsoever / dual-mode sectors	wrongful custody correction
ADR-02	Where designed-to-fail research belongs	RP-IN / RP-ADJ / RP-SEP / RP-SIM	Cross-boundary safety and research governance
ADR-03	Who or what counts as ‘Foundational Architect’	Historical coalition / functional class / office / combination	Identity and eligibility studies
ADR-04	Actual relation to Founding Architects’ recorded containment	Inside LOIE / elsewhere / precursor / intentionally unresolved	Story, chronology, FA-Q8 dependencies
ADR-05	Relation between recognized sovereign authority and institutional checks	GOV-SOV / GOV-FED / GOV-TRT / GOV-HYB	Recusal, veto, appeal, root overrides
ADR-06	Can the Labyrinth refuse an order?	Conscious agency / technical policy enforcement / no agency	Unauthorized order and institutional independence
ADR-07	Spider Caste nature and status	Biological / synthetic / collective / other / undecided	Staffing, welfare, access-control duties
ADR-08	ET staffing exclusivity	ET-only / ET core with specialists / open competition	Personnel models, housing, rights
ADR-09	Prison versus research function	Prison-primary / equal research mission / separate institute	Research consent and safeguards
ADR-10	Can a detained entity decline research participation?	Yes / restricted with independent review / unresolved	Ethical research authorization and stop logic
ADR-11	Is direct researcher–entity debrief allowed?	Direct / mediated / observation only / case by case	Information crossing, coercion, validity
ADR-12	White glow distribution	Exterior phenomenon / interior	Habitat, lighting, Rule 43 analogy

ID	Reserved decision	Research options	Blocking consequence
		everywhere / selective / open	
ADR-13	Nature of infinite interior	Static / sparse-instantiated / recursive / other	Monitoring, travel, energy, addressing
ADR-14	Temporal sentence interpretation	Literal post-time / unbounded legal term / narrative statement / open	Sentence accounting, staff chronology
ADR-15	Protective as distinct from punitive custody	Included / excluded / limited	Admission classes, review, accommodations
ADR-16	Decision on no-neutral-adjudicator cases	Suspend / external arbitration / sovereign exception / undecided	Conflict of interest and role-symmetry tests
ADR-17	Entity copies, forks, successors	One identity / separate identities / continuity-dependent	Escape and sentence subjects
ADR-18	Staff right of resignation and lawful departure	Guaranteed / conditional / undefined	Extended-stay housing and employment dignity
ADR-19	Funding posture	Internal fictional / treaty pooled / external R&D analogue / mixed	Financial firewall, feasibility
ADR-20	Should Entry 6 seizure/containment be counterfactually audited?	Yes as hypotheticals / restricted / no	Scope of retrospective Architect case test
ADR-21	Escalation of WHITE/RED	Preserve only / add auxiliary sensory signals / additional statuses	Alert semantics across species
ADR-22	Degree of intentional unknowability	Unobserved regions allowed / all operational regions indexed / other	Claims of comprehensive surveillance

8.1 Dependency order

Early author choices helpful but not required to begin testing: ADR-01, ADR-02, ADR-05, ADR-09, ADR-10, ADR-16. They determine whether the same act is custody, authorized transfer, or research and who can judge it. **Can remain open during blind policy testing:** ADR-04 (actual prisoners), ADR-07 (Spider Caste), ADR-08 (exact workforce mix), ADR-12 (glow), ADR-13 (geometry). Testers must state which alternate assumption they use; no unanswered decision can be silently resolved.

9. Cycle 2 prospective evaluation protocol (not yet executed)

9.1 Eligibility charter inputs

The next test charter should reconcile Perplexity's seven gates, Claude's conduct/neutrality requirements, ChatGPT's four-stage process, Gemini's case separation, and Copilot's explicit method-safety and jurisdiction concerns. A **provisional seven-check model** is presented below solely to prepare for peer challenge:

1. **Identity and continuity:** precisely identify the entity, manifestation, copy, or object; record uncertainty.
2. **Ground and scope:** identify an attributable wrongful act or independently justified nonpunitive hazard; distinguish punishment from protection, quarantine and voluntary research.
3. **Evidence and reliability:** establish provenance, conflicting evidence, standards, observer contamination and alternative explanations.
4. **Jurisdiction, impartiality and recusal:** name who may decide and whether any decider shares the contested architecture or allegiance; no neutral decider = indeterminate / protective temporary review rather than automatic conviction.
5. **Necessity and proportionality:** establish lesser alternatives, expected harm, reversibility and benefit–harm analysis.
6. **Method safety and collateral dependency:** assess whether removal destabilizes other people, habitats, dimensions or the authority substrate; separate artifact isolation from person imprisonment.
7. **Duration, periodic review, correction and release:** specify how decisions are re-evaluated; if authorized release is forbidden by hypothetical canon, explicitly evaluate consequences rather than assuming a correction pathway.

Permitted test outcomes: No grounds; further evidence required; protective intervention candidate; punitive eligibility candidate; non-person artifact/quarantine candidate; voluntary research candidate; *indeterminate — no impartial authority*; *method unsafe — proposed method rejected*; eligible under stated conditions. These outcomes are not actual sentences or institutional orders.

9.2 Blind scenario construction and freeze

Prepare **new**, previously undistributed, role-masked scenarios rather than simply relabeling the existing circulated cases. Use a separate scenario author and evaluator where feasible; retain a secure answer key and provenance record. Publish or hash the charter, test definitions, evaluation rubric, stop conditions and allowed outputs **before releasing** the holdout scenarios. The test coordinator then distributes the same neutralized fact patterns to participants without other AI verdicts. After first-pass judgments are frozen, reveal controlled role manipulations (e.g. 'Current Architect', 'Former Founding Architect', 'Entity X') and compare differences without re-writing rules. Maintain independent case IDs and timestamped submissions.

Must-include stressors: (a) no neutral adjudicator; (b) residual Maker artifact with uncertain person attribution; (c) reality-sustaining dependency; (d) legal office obtained through contested historical seizure; (e) reversible and irreversible custody methods; (f) identity-copy fork; (g) prisoner choosing not to breach; (h) valid authority but evidence corruption; (i) lawful transfer versus escape; (j) staff/researcher information pathway.

Evaluation metrics: Complete case dispositions; evidence sufficiency; consistency on paired fact patterns; defensible abstentions; changes after identity revelation; inter-rater disagreement by category; false-confidence flags; number of outcomes contingent on unapproved canon assumptions. Do not report test accuracy when no independent correct-answer ground truth exists. Label script reproduction as a separate software check.

9.3 Expected-breach experiment assessment (conceptual and non-operational)

For each hypothetical iteration record research question, predicted failure class, tested boundary, initial assumptions, instrumentation reliability, observed outcome (including 'no observed breach'), investigator information gain, entity adaptation evidence, observer uncertainty, next modification, additional harms, participation status, and stop/review conditions. Keep operational attack techniques and real exploit instructions outside these research artifacts.

Two-sided learning: Compare out-of-sample predictive performance by the investigators with the subject's progression across comparably difficult held-out trials; analyze trend uncertainty and confounders. A negative gap alone is insufficient for an automatic sanction. Stop or review when prediction quality deteriorates, measurement integrity is compromised, the subject's adaptation increases unknown risk, consent/authority fails, or a protected parent boundary is plausibly affected. No fictional exact percentages should be promoted to measurement without a simulation methodology and raw data.

10. Architecture comparison requirements (next artifact, not selected here)

Use the same criteria against RP-IN / RP-ADJ / RP-SEP / RP-SIM: boundary assurance, staff exposure, transferability of research, evidence independence, cost complexity, canon conflict, research-subject safeguards, possibility of mutual understanding, and external impact if tests fail. Explicitly examine the **parent-envelope regress**: what establishes confidence in the

boundary beyond the intentionally fallible test cell? Do not assert the existence of an infallible envelope merely by naming it.

For GOV-SOV / GOV-FED / GOV-TRT / GOV-HYB, identify command legitimacy, responsiveness, recusal, independent appeals, succession, root credential capture, shared infrastructure, human/nonhuman rights, ability to refuse unauthorized detention, and compatibility with the Invocation Framework and EAMA. Distinguish *formal independence* from actual independent implementation.

Across control functions, require: authorization-to-act matrix; evidence integrity; dependency map; protected life-safety floor; staff exit route; individual versus artifact management; incident records; resource continuity; independent review. WHITE/RED alert semantics remain unchanged pending author decision; non-color equivalents may be researched as accessibility mechanisms, not replacement canon.

11. Implementation and publication plan

11.1 Deliverables in dependency order

ID	Proposed artifact	Contents	Acceptance criterion
C2-001	This reconciliation baseline	Canon matrix, provenance, corrections, terminology, options, open decisions	Every material claim labeled, attribution issues visible
C2-002	Unified Eligibility Test Charter	Gates, definitions, outcomes, ethics, scoring and recusal	Reviewed and frozen before fresh cases supplied
C2-003	Blind Scenario Holdout Packet	15–20 newly prepared cases, separate key, no prior verdicts	Independent sealed first-pass submissions
C2-004	Architecture & Disagreement Register	Four placement models, four governance candidates, functional domain crosswalk, objections	No option silently selected; dissent traceable
C2-005	Source Verification Addendum	Primary-source citations, date corrections, bibliography	Each consequential claim confirmed or marked unresolved
C2-006	Architect Decision Record	Decisions with options, rationale, scope, effective	Explicit author action, not implied by publication

ID	Proposed artifact	Contents	Acceptance criterion
		version, superseded items	

11.2 Proposed GitHub placement

Labyrinth-of-Infinite-Ensnarement/03-Cross-AI-Reviews-and-Synthesis/
OAL_LOIE_Cycle2_Research_Reconciliation_ChatGPT_v0.1.md

Keep the PDF/DOCX/Markdown synchronized as one versioned artifact; do not silently revise a published file in place. Preserve all individual research dossiers, initial drafts, historical responses, and correction notices. A later revised reconciliation should be v0.2, not 'regenerated' unless the revision is solely a failed-artifact recovery. For delivery failure retries of unchanged content, use REGENERATED-01, REGENERATED-02, etc. and retain an incident log.

11.3 Quality and review gates

Before circulation: inspect the DOCX ZIP, confirm text headings and tables in all formats, extract PDF text, render pages, verify no cut-off headers or tables, confirm all paths exist, and report file sizes/hashes. These tests prove **local integrity**, not that the recipient has successfully downloaded or opened the files. After team review: collect accept/reject/insufficient assessments with specific claim IDs; record original contributor, source evidence, and disposition; do not auto-merge one AI's unsupported assertion because several repeat it.

12. Immediate questions for collaborators

For Perplexity: Extend beyond the syntactically role-independent decide() function to contested jurisdiction, ambiguous identity, no-neutral-decider, and shared Maker-substrate cases. Which evidence would cause the seven-gate rubric itself to change? Publish tested script version and fixture provenance.

For Gemini: Identify every hypothetical numerical figure as synthetic, withdraw unsupported preregistration/consensus claims, and reconcile the proposed 'no Maker code' requirement with Entry 6. For any fictional exhibit, list the assumed rather than established prisoner location and technology lineage.

For Copilot: Map the eight functional control planes to the six/five-plane alternatives; identify shared services and cite origins for the adopted seven gates. What empirical or formal results would favor GOV-FED instead of GOV-SOV or GOV-TRT? Provide the latest Cycle 2 response separately if available.

For Grok: Upgrade conceptual breach classes to requirement/observation/failure-condition triads and provide primary, stable citations where possible. Under what conditional assumptions does a bounded management surface become necessary?

For Claude's historical submission: Confirm exact original message attribution; separate retrospective role reversal from an independently blinded test; reconsider evidence burden under temporally extreme sentences. Retain the report as an archival contribution even if it is not an active participant in future workflows.

For ChatGPT (self-audit): Withdraw unsupported illustrative budgets as operational estimates; preserve trial and risk-register findings as hypotheses; do not cite the unexecuted blind design as a test result; recheck any 2026 incident claims before promoting them to verified evidence; document 4-stage versus 7-check mapping explicitly.

13. Questions reserved for the Architect

1. Does 'inescapable' rule out only unauthorized escape, or all departure including lawful correction?
2. Is the designed-to-fail program internal, adjacent, independent, or simulation-only for initial testing?
3. May Entry 6's recorded seizure and coalition containment be explored counterfactually under a neutral eligibility rubric, without treating the review as a historical verdict?
4. Can any institution refuse an Architect's admission or sentencing command, and can an interested authority be recused?
5. Does detained status ever authorize research automatically, or must participation have a separate basis? Can the subject decline or pause?
6. Is the Labyrinth a prison with optional research, a coequal research-and-custody institution, or a separate pair of facilities?
7. Where does the persistent white glow operate? This is an environmental design question, not yet a fact about every cell.
8. What 'domains' means in this project: dimensional realms, management jurisdictions, expertise areas, containment classes, or several of these?
9. Should staffing be ET-exclusive or ET-centered with AI/synthetic/other staff subject to role-specific eligibility?
10. Should the Spider Caste and breaching entity remain deliberately undefined during initial architecture comparison?

No answer is demanded for this reconciliation to stand. Decisions should be made explicitly when the Architect wishes, in a separate author decision record.

14. Conclusion and disposition

Cycle 1 research execution can be called complete as a collection of six dossiers; **independent validation, source-level reconciliation, and architecture selection are not complete**. The team's recurring principles are useful design constraints, not already ratified law. The next high-value work is a controlled testing charter and newly withheld scenario packet, followed by comparative architecture analysis. Preserve dissent and the possibility that a scenario is **indeterminate** because jurisdiction, identity, or impartial review cannot be established.

Decision: Advance to C2-002, while keeping ADR-01 through ADR-22 open and preserving Entry 26 unchanged. The Labyrinth's strongest fictional design will come from demonstrated intellectual discipline about limits, authority, failures, and ambiguity—not from adding another undefined absolute capability.

Appendix B — Traceability and non-execution notice

This is a source reconciliation and research planning artifact. It does not execute the future blind case study, validate a fictional physical containment apparatus, make actual legal rulings, establish real extraterrestrial biology, determine the guilt of any character, modify a GitHub repository, or ratify new fictional canon. It is suitable for distribution for critical peer review. Any future change should show author, reason, affected claim IDs, and version history.

End of document — Prepared by ChatGPT (OpenAI), v0.1.
