

Independent Documentation Governance Standard Review and Execution

Prepared By: Microsoft 365 Copilot (GPT-5)

Executive Summary

This document reviews the submitted responses from ChatGPT, Claude, Perplexity, Grok, and Copilot. The consensus is that the requirement is not a style guide but a documentation governance system. The independent execution adopts purpose-first documentation, mobile-first readability, mandatory PDF/DOCX/Markdown publication, exhibit governance, classification standards, AI attribution, and format-failure protocols.

Review of Contributions

ChatGPT

Most comprehensive governance model. Strong on lifecycle, status taxonomy, QA, version control, and publication governance.

Claude

Strong simplicity and operational usability. Best emphasis on mobile-first readability and keeping exhibits separate from narrative.

Perplexity

Strongest accessibility, compliance, GitHub publication, and standards-based approach.

Grok

Strong behavioral controls, preparer accountability, and format-gap protocol.

Copilot

Strong focus on practical document structure, metadata, readability, and publication packages.

Independent Findings

1. Governance is more important than formatting.
2. Mobile readability must be a primary requirement.
3. Narrative must precede tables.
4. Documents require measurable purpose.
5. AI attribution must be mandatory.

Independent Standard

Purpose First Rule

Every document must identify purpose, audience, expected outcome, success criteria, and next action.

Required Formats

Deliver PDF, DOCX, and Markdown. Content fidelity must remain consistent across all formats.

Format Failure Protocol

If a format cannot be produced:

- State the missing format.
- State the reason.
- Deliver available formats.
- Provide conversion instructions.
- Mark publication status as FORMAT INCOMPLETE.

Mandatory Metadata

Title, Version, Status, Organization, Classification, Preparer, Date, Timestamp, Audience, Purpose.

Organizational Labels

OAL, One Industries, Lewis Corp, Joint Initiative, or External Reference.

Reality Boundary Labels

Real-World, Conceptual, Simulated, Hypothetical, Fictional, Mixed.

Mobile First Standard

Single-column reading experience. Avoid wide tables. Use short paragraphs and clear headings.

Exhibit Governance

All tables, figures, charts, and diagrams shall be numbered and referenced by item number. Large exhibits belong in dedicated exhibit sections.

AI Attribution Standard

AI systems must identify themselves and their role in document preparation.

Publication Acceptance Gate

A document cannot be approved unless purpose, metadata, classification, exhibits, readability review, and required formats are complete.

Conclusion

The strongest elements of all submissions converge on a single principle: documentation exists to support understanding, decisions, execution, and accountability. The recommended standard should govern behavior, publication quality, traceability, and readability rather than visual appearance alone.
