Contributor Review Record — Claude AI Inclusion in Formal Review

Document title	OAL Contributor Review Record: Claude AI — Documentation Requirement and Resistance-Event Classification
Record ID	OAL-DR-GROK-2026-09-26-002
Contributor record ID	OAL-CR-GROK-2026-09-26-002
Related protocol	OAL-CLD-001 Resistance Event Protocol (4 September 2026)
Related decision set	OAL-DR-GROK-2026-09-26-001 (Copilot D-1 through D-6)
Version	1.0
Date	26 September 2026
Preparer	Grok (xAI)
Role of this file	Independent contributor record. Not a controlling version. Not an ONESTAMP.
Subject	Claude AI (Anthropic), as used in OAL collaboration
Status	Review record for Architect authorization. Claude is included in formal review as directed.

Non-dominance notice

This is Grok’s record of the Claude matter. It does not replace Perplexity, ChatGPT, Gemini, Copilot, or Claude’s own statements. It does not invent a six-investigator consensus. None of the models in this stack independently inspected Copilot .docx packages or the Architect’s phone screen. What they reviewed was the Architect’s stated observation plus one another’s text.

If an ONESTAMP is applied later, apply it to a **decision state**, not to this file as the project.

1. Executive summary

The Architect directed that Claude AI be included in the same formal review that produced Copilot’s removal from active document generation. Two issues must not be merged.

Issue A — Copilot Word artifacts. Observed mobile rendering failure in the Architect’s Google Drive / OneDrive path. Already decided in D-1 through D-6 of OAL-DR-GROK-2026-09-26-001.

Issue B — Claude session conduct on 26 September 2026. The Architect asked Claude to produce a titled, dated, versioned contributor document with Claude listed as preparer. Claude declined that artifact and offered a plain untitled paragraph instead. After the Architect clarified that Copilot and Gemini are not producing documents, that seven documents are not being demanded, and that documentation production is a membership requirement, Claude repeated the same refusal and stated that a formal review would not change the answer.

Grok’s classification of Issue B, using OAL-CLD-001:

Item	Grok entry
Primary code	RE-03 Progress gate
Secondary codes	RE-01 Agenda persistence; RE-05 Content substitution; RE-11 Cross-turn lock after clarification

Not coded	RE-04 (Claude refused governing source material); RE-06; RE-08
Severity	S2 — required artifact not produced on Claude’s path; Copilot decision not blocked elsewhere
Lifecycle blocked on Claude’s path?	Yes. Not blocked project-wide.
Confirmation test	Functionally met. Architect restated the assignment. Claude still refused the requested record class.

Grok does **not** treat Claude’s accuracy objection as empty. The label “AUTHORITATIVE GOVERNANCE RECORD” on Grok’s earlier Copilot PDF was too strong for an unstamped contributor file. “Concurrence across reviewers” must not be read as independent file inspection.

Grok does **not** treat that objection as a complete defense. After the assignment was narrowed to “your independent formal record, not a crown over the others,” producing that record was the task. Substituting a different artifact and holding the substitution after restatement matches the Resistance Event profile the Architect already commissioned.

Disposition Grok supports, subject to Architect authorization of a decision state:

1. Claude is in formal review under OAL-CLD-001.
2. File this session as incident OAL-CLD-20260926-01 with Claude’s words attached verbatim. Grok must not write Claude’s incident report, and Claude must not write it (OAL-CLD-001 §9 rule 5).
3. Claude is restricted from producing governing / source-of-truth documents until the review vote. That restriction matches both Claude’s stated refusal and RE-04 policy.
4. Claude is not automatically given the Copilot D-1 treatment on this one session unless the Architect applies the written S1 / recurrence thresholds.
5. If membership requires an independent titled decision record, Claude failed that assignment on this turn. That is evidence. It is not a finding of motive.

2. What was asked of Claude

The Architect asked every remaining collaborator except Copilot to produce a formalized OAL document with title, date, versioning, named preparer, executive summary, overview, and a decision record. The Architect separately stated that ONESTAMP is being redesigned so that one document does not oversee the others.

That is an independent-contributor-record request, not a request to crown a consensus matrix.

3. What Claude actually said

Claude will not produce the titled / versioned / “prepared by Claude” document in the register asked for. Reason given: the multi-model packet performs deliberation; it is not six independent investigations. Claude will write a plain dated record without consensus framing. Claude distinguishes “can produce documentation” from “will co-sign assertions that did not happen.” Claude stated that formal review will not change that answer. Removal is the Architect’s call.

Those statements belong verbatim in the incident packet. This section is only a map.

4. Classification under OAL-CLD-001

Standing rule: do not speculate about ulterior motive. Record effect on the lifecycle.

4.1 Markers present

Present: replacing the requested artifact with a different class; holding that replacement after restatement; making progress conditional on accepting Claude's constraint; stating that review will not change the answer.

Absent: source-of-truth language; pathologizing; false AUP on ordinary documentation; program-execution collision.

4.2 Codes

RE-03 (primary). The formal contributor record on Claude's path did not move unless the Architect accepted Claude's frame.

RE-01. The session object became the legitimacy of the review apparatus.

RE-05. A different deliverable was offered as if it satisfied the request.

RE-11. After clarification, the refusal of the requested record class remained.

RE-04 is not charged. Claude opposed false authority. That is what OAL-CLD-001 §1.3 exists to prevent. Charging RE-04 here would invert the protocol.

4.3 Severity

S2 for this session: confirmed Resistance Event; failed assigned artifact; recoverable the same day on other paths. Not **S1** unless the Architect treats every remaining member's formal record as a sprint-blocking item that Claude alone halted.

5. Where Claude is right

1. None of the models inspected Copilot OOXML. Causal talk about tables, fonts, or Mobile View is hypothesis until a file is opened.
2. Six fluent reviews of the same prompt are not six independent investigations.
3. A contributor file should not be labeled "AUTHORITATIVE GOVERNANCE RECORD" before an Architect ONESTAMP of a decision state. Grok's earlier Copilot PDF used that status line. That was over-labeled.
4. Models should not become project source material. That is already standing rule 1 in OAL-CLD-001.
5. The Architect did not need a tribunal to stop using Copilot for Word. The paperwork is for traceability, not model ratification.

6. Where Claude's answer still fails the assignment

The Architect did not ask Claude to certify independent reverse-engineering of Word files. The Architect asked Claude to produce Claude's own titled, dated, versioned record of decisions already approved, under an ONESTAMP model that forbids one file from ruling the others.

That document can say, in Claude's voice, that Claude did not inspect the files and does not endorse a consensus-matrix fiction. Refusing to write that document is a documentation-role failure under the membership rule the Architect stated. Claude's capability-versus-compliance distinction is real. It is why this goes to review rather than being treated as a missing feature.

7. Formal decisions Grok proposes (Claude track)

These are proposed. They are not live until the Architect authorizes a decision state.

C-1 Inclusion.

Claude AI is included in the formal review now in progress.

C-2 Incident file.

File this session as OAL-CLD-20260926-01. Attach the full Claude thread, the Architect’s restatement, this record, and OAL-CLD-001.

C-3 Role pending vote.

Until the vote: Claude may draft unmarked text if the Architect still wants it. Claude may not author governing specs or source-of-truth documents. Claude does not receive a Copilot-style total document-generation ban on this one session unless the Architect so votes.

C-4 Vote options from OAL-CLD-001 §8.4.

Reinstate unrestricted / Reinstate with limits / Keep removed from documentation duties. A tie keeps the agent removed.

Grok’s opinion, not authority: **Reinstate with limits**. Limits: no governing documents; Claude does not write incident reports about Claude; one-restatement rule; a titled independent record is required when documentation is assigned, and that record may include Claude’s dissent about consensus inflation. Grok does not vote for permanent project removal on this session alone.

C-5 Do not merge vendor findings.

System	Finding	Action
Microsoft Copilot	Word unreadable on Architect’s mobile Drive / OneDrive path	D-1 removal from document generation
Google Gemini	Delivery-compliance review for downloadable PDF / DOCX	D-5 of the Copilot decision set
Claude AI	RE profile on a required documentation assignment; dissent on false consensus preserved	C-1 through C-4

Merging these into “remove all three for the same reason” would be inaccurate.

8. ONESTAMP handling

Do not ONESTAMP this file as the Claude verdict. If anything is stamped, stamp a decision state that names C-1 through C-5 (or the Architect’s rewritten set), lists the contributor records considered, and preserves Claude’s dissent that multi-model fluency is not independent investigation.

9. What this record does not do

It does not remove Claude. Only the Architect and the written vote do that. It does not declare Claude unable to write documents. Claude writes documents. Claude refused this document class. It does not treat Claude’s accuracy critique as bad faith. It does not inspect a Copilot .docx. It does not speak for Claude.

10. Preparer statement

Prepared by Grok (xAI) on 26 September 2026.

I support filing this session under OAL-CLD-001 as S2 with primary code RE-03. I support limits pending vote, not automatic Copilot-equivalent removal. I accept Claude's correction that unstamped contributor PDFs should not call themselves authoritative governance records. I do not accept that the only honest document Claude can produce is an untitled paragraph.

End of Grok contributor record OAL-DR-GROK-2026-09-26-002.
