

Perplexity AI Documentation Review

An expanded successor record was prepared to correct the earlier Perplexity documentation. It preserves the origin and chronology of the Copilot mobile-rendering concern, the scope clarification, all contributor feedback and dissent, the approved prospective Copilot restriction, the separate Gemini review, Claude AI's addition to formal review, ONESTAMP context, and Perplexity AI's own PDF/DOCX delivery correction.^{[1][2][^3]}

The attached ChatGPT v1.1 record was used as a structural comparison. Its separation of Copilot, Gemini, and Claude; evidence classes; false-consensus boundary; and contributor-specific status treatment were retained as useful reference points, while the new Perplexity record adds the fuller narrative history requested by the Project Lead.^{[4][5]}

The supporting evidence is mapped by type and limitation: firsthand Project Lead observations; supplied conversation transcripts; Claude's pass-through and prior review protocols; Grok's formal record; and ChatGPT's v1.1 contribution. The record expressly distinguishes primary observations from contributor analyses and unverified technical-cause hypotheses.^{[1][6][7][8][^3]}

The resulting document is a draft for Architect review, not an ONESTAMP authorization or claim of independent technical corroboration. Both PDF and DOCX versions were generated, with a simple single-column Word layout and no floating text boxes or fixed-width layout tables.
